On the tenth anniversary of the September 11, 2001 terrorist attacks, David Ray Griffin reviews the troubling questions that remain unanswered 9/11 Ten Years Later is David Ray Griffin's tenth book about the tragic events of September 11, 2001. Asking in the first chapter whether 9/11 justified the war in Afghanistan, he explains why it did not. In the following three chapters, devoted to the destruction of the World Trade Center, Griffin asks why otherwise rational journalists have endorsed miracles (understood as events that contradict laws of science). Also, introducing the book's theme, Griffin points out that 9/11 has been categorized by some social scientists as a state crime against democracy. Turning next to debates within the 9/11 Truth Movement, Griffin reinforces his claim that the reported phone calls from the airliners were faked,

and argues that the intensely debated issue about the Pentagon—whether it was struck by a Boeing 757—is quite unimportant. Finally, Griffin suggests that the basic faith of Americans is not Christianity but "nationalist faith"—which most fundamentally prevents Americans from examining evidence that 9/11 was orchestrated by U.S. leaders—and argues that the success thus far of the 9/11 state crime against democracy need not be permanent.

A disorienting fictionalized portrayal of 9/11 mastermind Mohamed Atta and the meaning of madness. Ours is a century of fear. Governments and mass media bombard us with words and images: desert radicals, “rogue states,” jihadists, WMDs, existential enemies of freedom. We labor beneath myths that neither address nor describe the present situation, monstrous deceptions produced by a sound bite society. There is no reckoning of actuality, no understanding of the individual lives that inaugurated this echo chamber. In the summer of 1999, Mohamed Atta defended a master's thesis that critiqued the introduction of Western-style skyscrapers in the Middle East

and called for the return of the “Islamic-Oriental city.” Using this as a departure point, Jarett Kobek's novel ATTA offers a fictionalized psychedelic biography of Mohamed Atta that circles around a simple question: what if 9/11 was as much a matter of architectural criticism as religious terrorism? Following the development of a socially awkward boy into one of history's great villains, Kobek demonstrates the need for a new understanding of global terrorism. Joined in this volume by a second work, “The Whitman of Tikrit”—a radical reimagining of Saddam Hussein's last day before capture—ATTA is a brutal, relentless, and ultimately fearless corrective to ten years of propaganda and pandering. There is scarcely a small child in the English speaking western world, particularly the United States of America, who does not

recognize the name of Mohamed Atta. He made a name for himself that was horrifyingly notorious, as the ringleader of a 20 man terrorist group, the pilot who flew a hijacked plane laden with terrified passengers, into the North Tower of the World Trade Center. Conversely, there would be many fundamentalist Islamics who revere the name of Mohamed Atta. To them, he goes down in history as a martyr, someone heroic not only to be admired but emulated. This book will show that, at least on the part of Atta and some others involved, this was not only politically/religiously motivated, but was an aircraft assisted suicide. A numerological criminal analysis and profile of all 20 suicide terrorists who carried out the 9/11 attacks, including the lone terrorist who helped coordinate the attacks from overseas, having failed to obtain a visa. Atta's oeuvre has received the praise and respect of several noted African writers such as Buchi Emecheta, Chimamanda Ngozi Adichie and Helon Habila. Atta's insights into the roles and treatment of women, neocolonial government structures, patriarchy, 21st-century phenomena such as Nigerian e-mail phishing and the role of geography and place in characters' lives make her works some of the most indelible offerings across contemporary African fiction.

Nevertheless, there exists a relative dearth of critical analyses of her works. That Atta writes across the genres perhaps explains some of the lack of literary criticism of her works. This study will facilitate continued examination of Atta's writings and further dissemination of critique. In this premiere edited volume on the works of Sefi Atta, Collins has assembled contributors from around the globe who offer critical analysis on each of Atta's published novels and several of her short stories. In 1943, ritual murder was committed in a large African kingdom in the south of Ghana, then a colony of Great Britain. Palace officials and close kin of a recently deceased king had reputedly killed one of his chiefs in order to

smooth the king's passage into the afterlife. This riveting study tells the story of the murder, the trials and appeals of those accused of the crime, and the effect of the case on politics in Ghana and Great Britain. In recounting this fascinating case, the book also provides important insights into law and politics in the colonial Gold Coast, the clash between traditional and modern values, and the nature of African monarchy in the colonial period. Drawing on newly available oral and written evidence from Ghana and Britain,

Richard Rathbone builds a detailed picture of the leading characters in the case, as well as of the thirty-year rule of Nana Ofori Atta, the king. He shows how the death of the king destroyed the economic, social, and moral fabric of the kingdom, and how this destruction was further exacerbated by legal proceedings resulting from the murder. The case set the indigenous royal family against the colonial government, challenging the authority of each. Close kinsmen of the accused, hitherto in the vanguard of

moderate nationalism, were radicalized by their extended confrontation with the colonial justice system. It was their political initiatives that accelerated the formation of the Gold Coast's first national political party in the late 1940s, and which led in turn to the struggle for self-government and to the achievement of Ghanaian independence in 1957.

Technological Innovation in Legacy Sectors**

Dadda 'atta And His Forty Grandsons Blackwood's Edinburgh Magazine Jennifer Arthur and All the Gone The Dīgha-nikāya

The American economy faces two deep problems: expanding innovation and raising the rate of quality job creation. Both have roots in a neglected problem: the resistance of Legacy economic sectors to innovation. While the U.S. has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology, most of its economy is locked into Legacy sectors defended by technological/ economic/ political/ social paradigms that block competition from disruptive innovations that could challenge

their models. Americans like to build technology "covered wagons" and take them "out west" to open new innovation frontiers; we don't head our wagons "back east" to bring innovation to our Legacy sectors. By failing to do so, the economy misses a major opportunity for innovation, which is the bedrock of U.S. competitiveness and its standard of living. Technological Innovation in Legacy Sectors uses a new, unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors: energy, air and auto transport, the electric power grid, buildings, manufacturing, agriculture, health care delivery and higher education, and develops approaches to understand and transform them. It finds both strengths and obstacles to innovation in the national innovation environments - a new

concept that combines the innovation system and the broader innovation context - for a group of Asian and European economies. Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process. By increasingly offshoring production, the U.S. is losing important parts of its innovation capacity. "Innovate here, produce here," where the U.S. took all the gains of its strong innovation system at every stage, is being replaced by "innovate here, produce there," which threatens to lead to "produce there, innovate there." To bring innovation to Legacy sectors, authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation. They should fill institutional gaps in the innovation system and take measures t

address structural obstacles to needed disruptive innovations. In the specific case of advanced manufacturing, the production ecosystem can be recreated to reverse "jobless innovation" and add manufacturing-led innovation to the U.S.'s still-strong, research-oriented innovation system.

Ants have always fascinated the nature observer. Reports from ancient Egypt and Mesopotamia indicate that ants interested humans long ago. Myrmecology as a science had its beginning in the last century with great naturalists like Andre, Darwin, Emery, Escherich, Fabre, Fields, Forel, Janet, Karawaiew, McCook, Mayr, Smith, Wasmann and Wheeler. They studied ants as an interesting biological phenomenon, with little thought of the possible beneficial or detrimental effects ants could have on human activities (see Wheeler 1910 as an example). When

Europeans began colonizing the New World, serious ant problems occurred. The first reports of pest ants came from Spanish and Portuguese officials of the fifteenth and sixteenth centuries in Trinidad, The West Indies, Central America and South America. Leaf-cutting ants were blamed for making agricultural development almost impossible in many areas. These ants, *Atta* and *Acromyrmex* species, are undoubtedly the first ants identified as pests and may be considered to have initiated interest and research in applied myrmecology (Mariconi 1970).

Omnipresent in virtually all terrestrial ecosystems and of undisputed ecological and economical importance, the study of social insects is an area that continues to attract a vast number of researchers. As a consequence, a huge amount of information about their biology and ecology has accumulated. Distilling this scattered information into a highly focused reference, Food Exploitation by Social Insects: Ecological, Behavioral, and Theoretical Approaches unites traditional behavioral and ecological studies with theoretical and mathematical models. The book covers foraging ecology and behavior

of social insects, their communication mechanisms, and theoretical models of important aspects. It examines two different but inseparably interlaced levels of social insect foraging: the macroscopic or colony level and the microscopic or individual level. The chapters include discussions of foraging decisions, patterns and strategies of social insect colonies, and information use and information transfer between workers. The book provides examples of how this biological knowledge can be used as a basis for the construction of mathematical and neural network models that in return may increase understanding of social insect foraging. The contributors provide a fresh look on their topics, covering a wide

'Atta Troll' is a poem written by Heinrich Heine. The work mocks the literary failings Heine saw in the radical poets, particularly Freiligrath. It tells the story of the hunt for a runaway bear, Atta Troll, who symbolises many of the attitudes Heine despised, including a simple-minded egalitarianism and a religious view which makes God in the believer's image (Atta Troll conceives God as an
