Prior to 1862, when the Department of Agriculture was established, the report on agriculture was prepared and published by the Commissioner of Patents, and forms volume or part of volume, of his annual reports, the first being that of 1840. Cf. Checklist of public documents ... Washington, 1895, p. 148.

The One Resource with All the Facts You hear about Israel in the news regularly, but beyond the many opinions and preconceptions, do you really know what to make of the conflicts and controversies in the Middle East? What Should We Think About Israel? exposes the main current issues and provides well-researched objective facts to help you learn the truth about Israel's past, present, and future. This compilation from experts including Walter Kaiser, Jr., David Brickner, Mitch Glaser, Michael Brown, Arnold Fructenbaum, and Steven Ger, will help you answer the tough questions: What is the history of the strife and suffering that continues in Israeli and Palestinian territories—and what are the potential solutions? What are the significant and long-term implications of locating the US Embassy in Jerusalem? Why is the Holocaust still such a big deal nearly 75 years after it happened? What is the Boycott, Divestment, Sanctions movement all about? What is being done to restore relations between Jews and Arabs? Learn from respected scholars how to look past the heated debates and discern for yourself what is important to know about Israel, and how that affects you today.

Separating Fact from Fiction in the Middle East Conflict
Taser Electronic Control Devices and Sudden In-custody
Death

This text presents the work of 21 eminent psychoanalysts and child therapists from three continents - including Professors Didier Houzel of France and Renata Gaddini of Italy; Drs. David Rosenfeld of Argentina, James Grotstein, Victoria Hamilton, Judith Mitrani and Thomas Ogden of the USA; and Susanna Isaacs-Elmhirst and Isca Wittenberg of England - who explore and expand upon the work of the late Frances Tustin, which was devoted to the psychoanalytic understanding of the bewildering elemental world of the autistic child. Her realization that neurotic and borderline patients are haunted by the same primeval forces which constitute an enclave of autism has been profound, and the notion that autistic manoeuvres serve as a protective shell against the terrifying premature awareness of bodily separateness and dissolution into nothingness has had a substantial impact upon the re-thinking of many notable workers in the mental health field.

Mommy is the Mayor is a narrative about a city mayor's role. Seen through the eyes of children, it opens up the world to convey the impact local government has on their everyday lives. The book touches on the need for representation through the diverse illustrations and the demonstration of role modeling for children of color. Mommy is the

The emergence, maturity, and decline of the southern California citrus industry is seen here through the network of citrus worker villages that dotted part of the state's landscape from 1910 to 1960. Labor and Community shows how Mexican immigrants shaped a partially independent existence within a fiercely hierarchical framework of economic and political relationships. González relies on a variety of published sources and interviews with longtime residents to detail the education of village children; the Americanization of village adults; unionization and strikes; and the decline of the

citrus picker village and rise of the urban barrio. His insightful study of the rural dimensions of Mexican-American life prior to World War II adds balance to a long-standing urban bias in Chicano historiography.

During the Great Depression, a sense of total despair plagued the United States. Americans sought a convenient scapegoat and found it in the Mexican community. Laws forbidding employment of Mexicans were accompanied by the hue and cry to "get rid of the Mexicans!" The hysteria led pandemic repatriation drives and one million Mexicans and their children were illegally shipped to Mexico. Despite their horrific treatment and traumatic experiences, the American born children never gave up hope of returning to the United States. Upon attaining legal age, they badgered their parents to let them return home. Repatriation survivors who came back worked diligently to get their lives back together. Due to their sense of shame, few of them ever told their children about their tragic ordeal. Decade of Betrayal recounts the injustice and suffering endured by the Mexican community during the 1930s. It focuses on the experiences of individuals forced to undergo the tragic ordeal of betrayal, deprivation, and adjustment. This revised edition also addresses the inclusion of the event in the educational curriculum, the issuance of a formal apology, and the question of fiscal remuneration.

"Francisco Balderrama and Raymond Rodríguez, the authors of Decade of Betrayal, the first expansive study of Mexican repatriation with perspectives from both sides of the border, claim that 1 million people of Mexican descent were driven from the United States during the 1930s due to raids, scare tactics, deportation, repatriation and public pressure. Of that conservative estimate, approximately 60 percent of those leaving were legal American citizens. Mexicans comprised nearly half of all those deported during the decade, although they made up less than 1 percent of the country's population.

'Americans, reeling from the economic disorientation of the depression, sought a convenient scapegoat' Balderrama and Rodríguez wrote. 'They found it in the Mexican community.'--American History

Separating Evidence from Conjecture

Negative sentiment regarding conducted energy weapons is due largely to a lack of understanding about the technology behind such weapons and a misunderstanding of those weapons' physiological effects. Media accounts that speculatively associate sudden in-custody deaths with the use of conducted energy weapons only add to the confusion. TASER ELECTRONIC CONTROL DEVICES AND SUDDEN IN-CUSTODY DEATH documents 310 deaths in the United States proximate to the application of TASER electronic control devices from 1983 through 2006. The study examines the phenomenon of sudden death as it relates to electromuscular disruption technology and TASER electronic control devices by constructing 213 cases studies, dating from 1983 through 2005, and analyzing information available from news accounts,

police reports, and autopsies. After reviewing the available evidence from this extensive case study, the author concludes that these conducted energy weapons are excluded as the cause of death in 182 of the 212 cases. In only two cases did the evidence tend to confirm the weapon was either a cause of death or a significant contributing factor. While arguing that the TASER electronic control devices are safe less-lethal weapons, the author also cautions that they are not completely effective. He notes that the weapons were not effective in subduing more than 60 percent of violent or aggressive subjects in the 213 case studies, and he documents 131 cases of fatal police shootings and one police fatality following the failure of the weapons. The only way to determine whether the TASER electronic control devices is responsible for deaths is to separate evidence from conjecture and analyze the facts of each case. This book will be an excellent resource for law enforcement professionals, attorneys, investigators, and criminal justice personnel."
