Produced by co-founder Nader and director Ditlow for the non-profit Center for Auto Safety, this is a consumer's guide to the purchase, maintenance, and repair of new or used cars, and to the laws that protect purchasers. Distributed by Rizzoli. Annotation Inc., Portland, OR

While classroom learning is suited for conveying basic information to large numbers of people, Hoag (Engine Research Center, U. of Wisconsin at Madison) argues that continuing education for engineers most often requires small groups of people to rapidly discuss the roles of upper management, direct supervisors, and individual engineers in his proposed model for continuing education in organizations. After outlining the model, he discusses applications related to rotational programs, organizational assessment

hearings before the Committee on Banking, Housing, and Urban Affairs, United States Senate, Ninety-sixth Congress, first session, on S. 1965 ... S. 1937 ...

What do you do when the fantasy of reuniting with your first love comes true? Especially when he died in a car crash twenty years earlier... Louise Harrington pines for her youth as she looks out her office window at the quad. Her ten-year marriage ended four years ago, for reasons she has yet to fathom. At thirty-eight she is as confused about the men in her life as she ever was at seventeen. So when the double of her high school sweetheart appears in her life, she can not tell if she has gone mad, if this is a joke or some kind of miracle. When her best friend Missy gets involved (it has taken Louise years to forgive her for stealing him the first time) history begins to repeat itself as Louise tries to make sense of the crazy and mysterious turn her life has taken. P.S. is a beautifully written, witty, and profound examination of desire, at once deeply affecting and knowingly humorous about affairs of the heart. Schulman has written a love story, a mystery, a nostalgic romp for anyone who's ever been in and out of love.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

A richly illustrated history of the first cross-country auto trips exposes the role of these well-publicized jaunts in changing the way the public felt about this new technology. (Transportation)

Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is, and continues to be, of supreme importance to countless companies, municipalities and governments around the world, and Lees' is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books (and cross-referencing systems) would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing three volume reference instead. The process safety encyclopedia, trusted worldwide for over 30 years Now available in print and online, to aid searchability and portability Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource as opposed to multiple sources

Cassier's Engineering Monthly

Advanced Motorsport Engineering is an essential textbook for students on Motorsports Engineering courses and a handy reference those already working in the industry. The book covers advanced topics in motorsport such as diagnosing transmission. Sections on composite materials and advanced engine management systems provide a complete coverage of level 3 courses. Each unit in the IMI and EAL syllabus is covered in full and illustrated with photos, diagrams and key

easily matched to the BTEC National course structure. Motorsport is not just about the spectacle of some of the world's most popular and famous sporting events - it also plays a crucial role in developing new techniques and technologies

be the first step in a career in one of the most exciting and challenging sectors of high performance engineering. Andrew Livesey is the Head of the School of Engineering at North West Kent College, UK

"History of the American society of mechanical engineers. Preliminary report of the committee on Society history," issued from time to time, beginning with v. 30, Feb. 1908.

Vols. for 1919- include an Annual statistical issue (title varies).

An integrated, highly practical approach to product developmentusing simultaneous engineering Industrial engineers and designers as well as managers working on new product development (NPD) typically do not have the time or the expertise to get involved in functions outside their immediate area. Yet the very nature of NPD requires a number of functions and processes to be performed concurrently. This is where simultaneous engineering comes in. Simultaneous Engineering for New Product Development offers state-of-the-art, integrated coverage of these two hot topics in manufacturing. Industry expert Jack Ribbens draws on firsthand experience with the successful application of simultaneous engineering in the automotive industry, discussing how this approach can help streamline the entire development and production process, resulting in high-quality, competitive goods. He examines all phases of the process, devoting a chapter to each key element-from market research to design and engineering to manufacturing, selling, and customer service and support. And while most books on concurrent engineering stress the theoretical aspects of the field, Ribbens's book is decidedly practical, complete with case studies from the automotive, aerospace, heavy vehicle, and electronic industries that can be applied to any manufactured product. With mathematical model development as well as useful graphs, checklists, and references, Simultaneous Engineering for New Product Development will help manufacturing professionals take advantage of new trends and technologies in manufacturing well into the twenty-first century.

The Technical Index

Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries. Its success is incontrovertible, with the exponential increase in techniques and innovations. Rapid advances in new technologies such as artificial intelligence, as well as current societal needs – sustainable development, climate change, renewable energy, the environment – are developments that must be taken into account in industrial renewal. Process Engineering Renewal 2 focuses on research in process engineering, which is partly overshadowed by the sciences that contribute to its development. The external constraints of this interface science must be seen in relation to conservation, sustainable development, global warming, etc., which are linked to current success and the difficulty of taking risks in research.
