*Bathing in antiquity elevates a prosaic function to the level of a civic institution for which there is no counterpart in contemporary culture. Enriched by over 500 illustrations, many of them by the author, Baths and Bathing in Classical Antiquity is an important sourcebook for this ancient institution. Through hundreds of examples, it reviews and analyzes the structure, function, and design of baths, seeking to integrate their architecture with the wider social and cultural custom of bathing, and examining in particular the changes this custom underwent in Late Antiquity and in Byzantine and Islamic cultures. *of ancient bathing from several points of view. Sociologically, the baths with their vast appeal for all levels of society - were seen as the epitome of democratic ideals and institutions. Politically, they provided the perfect vehicle of propaganda: their lavish and magnificent interiors reflected the might and prosperity of the Roman empire and the apparent generosity of the emperor himself. Architecturally, baths are at the vanguard in the development of Roman building technology. Some of the earliest uses of concrete as a building material and the most innovative applications of the aesthetics of concrete - bold, curvilinear forms, vaults, and domes involved bath buildings. Because of their status as transition between purely utilitarian structures and the more conservative, traditional forms of public and religious architecture, the baths helped to propagate and make acceptable new ideas and new styles*

Guiding the reader through the customs, rituals, and activities associated with public bathing, Yegul traces the origins and development of baths and bathing customs and analyzes the sophisticated technology and architecture of bath complexes, which were among the most imposing of all Roman building types. He also examines the reception of bathing throughout the classical world and the transformation of bathing culture across three continents in Byzantine and Christian societies. The volume concludes with an epilogue on bathing and cleanliness in post-classical Europe, revealing the changes and continuities in culture that have made public bathing a viable phenomenon even in the modern era. So much about the society that is now emerging in the twenty-first century bears an astonishing resemblance to the most prominent features of what we call the classical world - its institutions, its priorities, its entertainment, its physics, its sexual morality, its food, its politics, even its religion. The ways in which we live our rich and varied lives correspond - almost eerily so - to the ways in which the Greeks and Romans lived theirs. Whether we are eating and drinking, bathing or exercising or making love, pondering, admiring or enquiring, our habits of thought and action, our diversions and concentrations recreate theirs. It is as though the 1500 years after the fall of Rome had been time out from traditional ways of being

human. This eye-opening book makes us look afresh at who we are and how we got here. Full Circle is not only wonderfully witty and brilliantly astute, but also profound and often disquieting. This lavishly illustrated book looks at the art and architecture of episcopal palaces as expressions of power and ideology. Tracing the history of the bishop's residence in the urban centers of northern Italy over the Middle Ages, Maureen C. Miller asks why this once rudimentary and highly fortified structure called a domus became a complex and elegant "palace" (palatium) by the

late twelfth century. Miller argues that the change reflects both the emergence of a distinct clerical culture and the attempts of bishops to maintain authority in public life. She relates both to the Gregorian reform movement, which set new standards for clerical deportment and at the same time undercut episcopal claims to secular power. As bishops lost temporal authority in their cities to emerging communal governments, they compensated architecturally and competed with the communes for visual and spatial dominance in the urban center. This rivalry left indelible marks on the layout and character of Italian cities. Moreover, Miller contends, this struggle for power had highly significant, but mixed, results for western Christianity. On the one hand, as bishops lost

direct governing authority in their cities, they devised ways to retain status, influence, and power through cultural practices. This response to loss was highly creative. On the other hand, their loss of secular control led bishops to emphasize their spiritual powers and to use them to obtain temporal ends. The coercive use of spiritual authority contributed to the emergence of a "persecuting society" in the central Middle Ages.
