Focusing on market microstructure, Harris (chief economist, U.S. Securities and Exchange Commission) introduces the practices and regulations governing stock trading markets. Writing to be understandable to the lay reader, he examines the evaluation of trading strategies, explores liquidity and volatility, and considers the evaluation of trader performance. Annotation (c) 2003 Book News, Inc., Portland, OR (booknews.com). A remarkable look at how the growth, technology, and politics of high-frequency trading have altered global financial markets In today's financial markets In today's financial markets, trading floors on which brokers buy and sell shares face-to-face have increasingly been replaced by lightning-fast electronic system, a new approach to trading—automated high-frequency trading or HFT—began and then spread throughout the world. HFT has brought new efficiency to global trading, but has also created an unrelenting race for speed, leading to a systematic, subterranean battle among HFT algorithms. In HFT, time is measured in nanoseconds (billionths of a second), and in a nanosecond the fastest possible signal—light in a vacuum—can travel only thirty centimeters, or roughly a foot. That makes HFT exquisitely sensitive to the length and transmission capacity of the cables connecting computer servers to the exchanges' systems and to the location of the microwave towers that carry signals between computer datacenters. Drawing from more than 300 interviews with high-frequency traders, and many others, and how exchanges sometimes engineer technical systems to

favor certain types of algorithms over others. Focusing on the material, political, and economic characteristics of high-frequency trading at the Speed of Light offers a unique glimpse into its influence on global finance and where it could lead us in the future. In 1517, Martin Luther nailed his 95 theses to the wall of Wittenberg church. He argued that the Church's internally consistent but absurd doctrines had pickled into a dogmatic structure of untruth. It was time for a Reformation. Half a millennium later, Steve Keen argues that economics needs its own Reformation. In Debunking Economics, he eviscerated an intellectual church's internally consistent but absurd doctrines had pickled into a dogmatic structure of untruths and logical fallacies, and yet is still mysteriously worshipped by its scholarly high priests. In this book, he presents his Reformation: a New Economics, which tackles serious issues that today's economic priesthood ignores, such as money, energy and ecological catastrophe.
