This two volume set (CCIS 1451 and 1452) constitutes the refereed proceedings of the 7th International Conference of Pioneering Computer Scientists, Engineers and Educators, ICPCSEE 2021 held in Taiyuan, China, in September 2021. The 81 papers presented in these two volumes were carefully reviewed and selected from 256 submissions. The papers are organized in topical sections on big data management and applications; social media and recommendation systems; infrastructure for data science; basic theory and techniques for data science; machine learning for data science; multimedia data management and analysis; social media and recommendation systems; data security and privacy; applications of data science; education research, methods and materials for data science and engineering; research demo.

Without proper training on the intricacies of race and culture, pre-service and in-service teachers may unwittingly continue outdated and ineffective pedagogies. As the demographics of student bodies shift to include more diverse backgrounds, fluency in the discourse of social justice becomes necessary. The Handbook of Research on Promoting Cross-Cultural Competence and Social Justice in Teacher Education elucidates the benefits, challenges, and strategies necessary to prepare teachers to meet the needs of a diverse student body. Featuring the newest research and pedagogical tools written by diverse scholars in the field of teacher training, this expertly crafted handbook is ideal for teachers, administrators, students of education, and policymakers.

The ability to speak two or more languages is a common human experience, whether for children born into bilingual families, young people enrolled in foreign language classes, or mature and older adults learning and using more than one language to meet life's needs and desires. This Handbook offers a developmentally oriented and socially contextualized survey of research into individual bilingualism, comprising the learning, use and, as the case may be, unlearning of two or more spoken and signed languages and language varieties. A wide range of topics is covered, from ideologies, policy, the law, and economics, to exposure and input, language education, measurement of bilingual abilities, attrition and forgetting, and giftedness in bilinguals. Also explored are cross- and intra-disciplinary connections with psychology, clinical linguistics, second language acquisition, education, cognitive science, neurolinguistics, contact linguistics, and sign language research.

"Language documentation," also often called "documentary linguistics," is a relatively new subfield in linguistics which has emerged in part as a response to the pressing need for collecting, describing, and archiving material on the increasing number of endangered languages. The present book details the most recent developments in this rapidly developing field with papers written by linguists primarily based in academic institutions in North America, although many conduct their fieldwork elsewhere. The articles in this volume position papers and case studies focus on some of the most critical issues in the field. These include (1) the nature of contributions to linguistic theory and method provided by documentary linguistics, including the content appropriate for documentation; (2) the impact and demands of technology in documentation; (3) matters of practice in collaborations among linguists and communities, and in the necessary training of students and community members to conduct documentation activities; and (4) the ethical issues involved in documentary linguistics.'

Bilingual English-Spanish Assessment (BESA)

When a young bilingual child experiences language difficulties, it can be hard to tell if those challenges are due to a disorder or just limited exposure to the English language. That's a critical distinction--because while limited language exposure will fix itself over time, a language impairment is a clinical issue that will cause the child difficulties in school without timely and effective intervention. Now there's a valid, reliable assessment that specifically responds to the needs of young Spanish-English bilingual children. For use with children ages 4 through 6 years who have varying degrees of bilingualism, the Bilingual English-Spanish Assessment (BESA) was developed to identify phonological and/or language impairment in bilingual children and English language learners using a standardized protocol differentiate between a delay in English language acquisition and a true language disorder document children's speech and language strengths and needs monitor children's progress in both languages and use the information to make decisions about intervention How BESA Works Through a combination of subtests for students and surveys for teachers and parents, BESA reveals the big picture of a young bilingual child's language development. Comprehensive assessment with BESA includes: 3 subtests (in both English and Spanish). These three standardized- norm-referenced subtests address the key domains of morphosyntax, semantics, and phonology. The subtests are administered with children one-on-one in a quiet, well-lit, well-ventilated room free of distractions. 2 questionnaires. The SLP gathers more information by interviewing both parents and teachers. Bilingual Input-Output Survey (BIOS): determines Spanish and English use at home and school and pinpoints which language(s) need testing Inventory to Assess Language Knowledge (ITALK): identifies the parent's and teacher's perception of the child's performance in each language and highlights areas of possible concern. Pragmatic activity. This 5- to 10-minute warmup activity, in which children are asked to "help wrap a present" with the examiner, is used to establish rapport with the child and give clinicians an idea of how collaborative and interactive the child will be during the rest of the assessment. BESA Benefits Valid and reliable. There are very few assessment tools for bilingual children, and even fewer that are valid and reliable. BESA answers the call for a bilingual assessment backed up with solid evidence of validity and reliability. Culturally and linguistically appropriate. BESA subtests are different for each language; the Spanish subtest isn't just a translation of the English one. Dialects were taken into consideration--the norming sample included 17 Spanish dialects and 7 regional dialects for English--and items were developed for each language based on the markers, structure, and culture of that language. Uncovers the full picture of a child's language development. Not only does BESA identify language impairments, it also helps you gauge progress in both languages and document a child's dominant language across different domains of speech and language. This critical information will help you plan interventions and educational programming for bilingual children. Flexible and convenient. You can use each BESA component independently or combine them as part of an assessment battery. Choose which component you want to give--you're not required to administer both the English and Spanish subtests. BESA can also be given over multiple sessions, so you can easily fit it into your schedule. What's in the kit? 1 BESA Test Manual 1 BESA Stimulus Book 20 BESA Protocol English Forms 20 BESA Protocol Spanish For

Up to now, the focus in the field of language documentation has been predominantly on North American and Australian languages. However, the greatest genetic diversity in languages is found in Latin America, home to over 100 distinct language families. This book gives the Latin American context the attention it requires by consolidating the work of field researchers experienced in the region into one volume for the first time. Data Science

How do people learn nonnative languages? Is there one part or function of our brains solely dedicated to language processing, or do we apply our general information-processing abilities when learning a new language? In this book, an interdisciplinary collaboration of scholars and researchers presents an overview of the latter approach to adult second language acquisition and brings together, for the first time, a comprehensive picture of the latest research on this subject. Clearly organized into four distinct but integrated parts, Mind and Context in Adult Second Language Acquisition first provides an introduction to information-processing approaches and the tools for students to understand the data. The next sections explain factors that affect language learning, both internal (attention and awareness, individual differences, and the neural bases of language acquisition) and external (input, interaction, and pedagogical interventions). It concludes by looking at two pedagogical applications: processing instruction and content based instruction. This important and timely volume is a must-read for students of language learning, second language acquisition, and linguists who want to better understand the information-processing approaches to learning a non-primary language. This book will also be of immense interest to language scholars, program directors, teachers, and administrators in both second language acquisition and cognitive psychology.

This encyclopedia is divided into three sections: individual bilingualism; bilingualism in society and bilingual education. It includes many pictures, graphs, maps and diagrams. The book concludes with a comprehensive bibliography on bilingualism.

The field of semantic computing is highly diverse, linking areas such as artificial intelligence, data science, knowledge discovery and management, big data analytics, e-commerce, enterprise search, technical documentation, document management, business intelligence, and enterprise vocabulary management. As such it forms an essential part of the computing technology that underpins all our lives today. This volume presents the proceedings of SEMANTICS 2021, the 17th International Conference on Semantic Systems. As a result of the continuing Coronavirus restrictions, SEMANTICS 2021 was held in a hybrid form in Amsterdam, the Netherlands, from 6 to 9 September 2021. The annual SEMANTICS conference provides an important platform for semantic computing professionals and researchers, and attracts information managers, Tarchitects, software engineers, and researchers from a wide range of organizations, such as research facilities, NPOs, public administrations and the largest companies in the world. The subtitle of the 2021 conference ' s was " In the Era of Knowledge Graphs ", and 66 submissions were received, from which the 19 papers included here were selected following a rigorous single-blind reviewing process; an acceptance rate of 29%. Topics covered include data science, machine learning, logic programming, content engineering, social computing, and the Semantic Web, as well as the additional sub-topics of digital humanities and cultural heritage, legal tech, and distributed and decentralized knowledge graphs. Providing an overview of current research and development, the book will be of interest to all those working in the field of semantic systems.

Fast Facts at Your Fingertips! REA's Quick Access Study Charts contain all the information students, teachers, and professionals need in one handy reference. They provide quick, easy access to important facts. The charts contain commonly used mathematical formulas, historical facts, language conjugations, vocabulary and more! Great for exams, classroom reference, or a quick refresher on the subject. Most laminated charts consist of 2 fold-out panels (4 pages) that fit into any briefcase or backpack. Each chart has a 3-hole punch for easy placement in a binder. Each chart measures 8 1/2" x 11"
