Williams reveals the central role of African American soldiers in the global conflict and how they, along with race activists and ordinary citizens, committed to fighting for democracy at home and beyond. Using a diverse range of sources, Torchbearers of Democracy reclaims the legacy of African American soldiers and veterans and connects their history to issues such as the obligations of citizenship, combat and labor, diaspora and internationalism, homecoming and racial violence, "New Negro" militancy, and African American memories of the war.

Although considered the best approach to motivation in terms of theoretical soundness for some 25 years, expectancy theory was considered lacking in applications. For the first time, this book presents an application model that gives practical value to the expectancy theory of motivation thus enabling managers to use it to improve individual and organizational performance. Emphasis is not on simple motivation problems with straightforward solutions, but instead the focus is on dealing with difficult motivation problems, and doing so when the manager's hands are tied relative to the solutions that can be offered.

Christmas is not everybody's favorite holiday. Historically, Jews in America, whether participating in or refraining from recognizing Christmas, have devised a multitude of unique strategies to respond to the holiday season. Their response is a mixed one: do we participate, try to ignore the holiday entirely, or create our own traditions and make the season an enjoyable time? This book, the first on the subject of Jews and Christmas in the United States, portrays how Jews are shaping the public and private character of Christmas by transforming December into a joyous holiday season belonging to all Americans. Creative and innovative in approaching the holiday season, these responses range from composing America's most beloved Christmas songs, transforming Hanukkah into the Jewish Christmas, creating a national Jewish tradition of patronizing Chinese restaurants and comedy shows on Christmas Eve, volunteering at shelters and soup kitchens on Christmas Day, dressing up as Santa Claus to spread good cheer, campaigning to institute Hanukkah postal stamps, and blending holiday traditions into an interfaith hybrid celebration called "Chrismukkah" or creating a secularized holiday such as Festivus. Through these venerated traditions and alternative Christmastime rituals, Jews publicly assert and proudly proclaim their Jewish and American identities to fashion a universally shared message of joy and hope for the holiday season. Free markets made US universities world leaders in research. Economist Miguel Urquiola argues that in the late nineteenth century, entrepreneurial universities saw they could meet the industrializing country's demand for expertise. They moved away from religiously inspired teaching, and market dynamics allowed them to surpass European competitors. It's 13th-century Europe and a young monk, Michael Scot, has been asked by the Holy Roman Emperor to translate the works of Aristotle and recover his "lost" knowledge. The Scot sets to his task, traveling from the Emperor's Italian court to the translation schools of Toledo and from there to the Moorish library of Córdoba. But when the Pope deems the translations heretical, the Scot refuses to desist. So begins a battle for power between Church and State—one that has shaped how we view the world today.

The BLS patient care standards state the Ministry of Health and Long-Term Care expectations with respect to how paramedics will interact with their patients. The standard sets out a logical ordering of the inter-related activities and practices of paramedics, activities which start with the patient's entry point to, and end with, their exit point from the ambulance system. The standard is divided into eight sections: general standard of care, medical patient categories, trauma patient categories, environment-related disorders, obstetrical conditions, pediatric, geriatrics, and psychiatric disorders.--Includes text from document.

Rethinking Your Supply Chain and Logistics to Create Maximum Value at Minimum Total Cost
This book is for anyone interested or involved in teaching, training, or instructing, whether you are just getting into the field or thinking about it or you have been teaching for decades. It is for those who administer teaching, training, or instructing. The book was written for academics and those who teach in academies and other professional adult learning environments. The book's contents are applicable to all types of colleges, be they community colleges, four-year colleges, or universities, both private and public, for-profit or nonprofit. Most professional practitioner-type instructors go through some sort of instructor school, teachers earn degrees in teaching, but many who teach or instruct are never trained or taught how to teach or train. Few professors are taught how to teach. They have been taught, so this is where they often draw their own teaching styles. Regardless of where you teach, train, or instruct, this book and its contents are for you. The book goes into great detail regarding face-to-face classes as well as online and other delivery methods. The lessons found in this book can be applied to new students, undergraduate, or graduate students. The lessons apply equally to basic, in-service, and specialized training. My hope is that no matter how you begin a battle for you, you will find many new nuggets of information that will add to your teaching toolbox. One of my goals in life is to leave a positive lasting impact. I want to help students and other instructors recognize and reach their full potential. I want you to be the best instructor you can be. I strongly believe we impact people all the time whether we know it or not. You can and will make a big difference in your students' lives.

Social enterprises represent a new kind of venture, dedicated to pursuing profits for owners and benefits for society. Social Enterprise Law provides tools that will allow them to raise the capital they need to flourish. Social Enterprise Law weaves innovation in contract and corporate governance into powerful protections against insiders sacrificing goals such as environmental sustainability in the pursuit of short-term profits. Creating a stable balance between financial returns and public benefits will allow social entrepreneurs to team up with impact investors that share their vision of a double bottom line. Brakman Reiser and Dean show how novel legal technologies can allow social enterprises to access capital markets, including unconventional sources such as crowdfunding. With its straightforward insights into complex areas of the law, the book shows how a social mission can even be shielded from the turbulence of an acquisition or bankruptcy. It also shows why, as the metrics available to measure the impact of social missions on individuals and communities become more sophisticated, such legal innovations will continue to become more robust. By providing a comprehensive survey of the U.S. laws and a bold vision for how legal institutions across the globe could be reformed, this book offers new insights and approaches to help social enterprises raise the capital they need to flourish. It offers a rich guide for students, entrepreneurs, investors, and practitioners.

20-1119 Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specially crew—needs to know to operate effectively in the prehospital critical care environment. It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

In the spring of 1789, within weeks of the establishment of the new federal government based on the U.S. Constitution, the Senate and House of Representatives fell into dispute regarding how to address the president. Congress, the press, and individuals debated more than thirty titles, many of which had royal associations and some of which were clearly monarchical. For Fear of an Elective King is Kathleen Bartoloni-Tuazon's rich account of the title controversy and its meanings. The short, intense legislative phase and the prolonged, equally intense public phase animated and shaped the new nation's broadening political community. Rather than simply reflecting an obsession with etiquette, the question challenged Americans to find an acceptable balance between power and the people's sovereignty while assuring the country's place in the Atlantic world. Bartoloni-Tuazon argues that the resolution of the controversy in favor of the modest title of "President" established the importance of recognition of the people's views by the president and evidence of modesty in the presidency, an approach to leadership that fledged the presidency's power by not flaunting it. How the country titled the president reflected the views of everyday people, as well as the recognition by social and political elites of the irony that authority rested with acquiescence to egalitarian principles. The controversy's outcome affirmed the republican character of the country's new president and government, even as the conflict was the opening volley in increasingly partisan struggles over executive power. As such, the dispute is as relevant today as in 1789.

In an age of unprecedented corporate and political control over life inside of educational institutions, this book provides a needed intervention to investigate how the economic and political elite use traditional artifacts in K-16 schools to perpetuate their interests at the expense of minoritized social groups. The contributors provide a comprehensive examination of how textbooks, the most dominant cultural force in which corporations and political leaders impact the schooling curricula, shape students' thoughts and behavior, perpetuate power in dominant groups, and trivialize social groups who are oppressed on the structural axes of race, class, gender, sexuality, and (dis)ability. Several contributors also generate critical insight in how power shapes the production of textbooks and evaluate whether textbooks still perpetuate dominant Western narratives that normalize and privilege patriotism, militarism, consumerism, White supremacy, heterosexism, rugged individualism, technology, and a positivist conception of the world. Finally, the book highlights several textbooks that challenge readers to rethink their stereotypical views of the Other, to reflect upon the constitutive forces causing oppression in schools and in the wider society, and to reflect upon how to challenge corporate and political dominance over knowledge production.
