In the most recent months and years, in locations all over the globe -Pakistan, Haiti, the Caribbean, the U.S. Gulf Coast, South America, the Gulf of Aden, the Philippines, and Afghanistan - Marine Corps forces were either engaging with our allies, conducting full spectrum counter-insurgency operations,

enabling the Joint Force and Interagency Non-governmental Agency elements, providing humanitarian assistance and disaster relief, deterring aggression or contributing to assured access. Today's Marine Corps is a "middleweight force." We fill the void in our nation's defense for an agile force that is comfortable operating at the high and low ends of the threat spectrum or the more likely ambiguous areas in between. We will continue to support our national objectives in Afghanistan. Concurrently, we will modernize, reset and reconstitute our equipment in order to provide a balanced air-ground-logistics team that is forward deployed and

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

United States and Britain conducted a lightning-fast military campaign against Iraq. Confounding predictions of failure, the Anglo-American victory brought down not just the Iraqi regime, but also much of the conventional wisdom about modern war. But even as U.S. and British forces occupied Basra, Tikrit, and Mosul, the Iraqi nation slipped into anarchy - and new military and security challenges emerged." "In this book, respected military analyst Anthony Cordesman provides the first in-depth examination of the key issues swirling around the most significant U.S. war since Vietnam. Finding answers is essential if we are to understand the United States' awesome power and its place in a new age of international terror and regional conflict. In the military, information technology (IT) has enabled profound advances in weapons systems and the management and operation of the defense enterprise. A significant portion of the Department of Defense (DOD) budget is spent on capabilities acquired as commercial IT commodities, developmental IT systems that support a broad range of warfighting and functional applications, and IT components embedded in weapons systems. The ability of the DOD and its industrial partners to harness and apply IT for warfighting, command and control and

communications, logistics, and transportation has contributed enormously to fielding the world's best defense force. However, despite the DOD's decades of success in leveraging IT across the defense enterprise, the acquisition of IT systems continues to be burdened with serious problems. To address these issues, the National Research Council assembled a group of IT systems acquisition and T&E experts, commercial software developers, software engineers, computer scientists and other academic researchers. The group evaluated applicable legislative

requirements, examined the processes and capabilities of the commercial IT sector, analyzed DOD's concepts for systems engineering and testing in virtual environments, and examined the DOD acquisition environment. The present volume summarizes this analysis and also includes recommendations on how to improve the acquisition, systems engineering, and T&E processes to achieve the DOD's network-centric goals. crucial for understanding the current situation in the Middle East. From the author's introduction: "My purpose is a narrative history of the 1st Infantry Division from 1970 through the Operation Desert Storm celebration held 4th of July 1991. This story is an account of the revolutionary changes in the late Cold War. The Army that overran Saddam Hussein's Legions in four days was the product of important changes stimulated both by social changes and institutional reform. The 1st Infantry Division reflected benefits of those changes, despite its low priority for troops and

material. The Division was not an elite formation, but rather excelled in the context of the Army as an institution." This book begins with a preface by Gordon R. Sullivan, General, USA, Retired. In twelve chapters, author Gregory Fontenot explains the history of the 1st infantry Division from 1970 to 1991. In doing so, his fast-paced narrative includes elements to expand the knowledge of non-military readers. These elements include a glossary, a key to abbreviations, maps, nearly two dozen photographs, and thorough bibliography. The First infantry Division and the

MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air-Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a

The Department of Defense is in the process of transforming the nation's armed forces to meet the military challenges of the 21st century. Currently, the opportunity exists to carry out experiments at individual and joint service levels to facilitate this transformation.

Experimentation, which involves a spectrum of activities including analyses, war games,

modeling and simulation, small focused experiments, and large field events among other things, provides the means to enhance naval and joint force development. To assist the Navy in this effort, the Chief of Naval Operations (CNO) asked the National Research Council (NRC) to conduct a study to examine the role of experimentation in building future naval forces to operate in the joint environment. The NRC formed the Committee for the Role of Experimentation in Building Future Naval Forces to perform the study.
