Consiliso is a concept that will help any medical device company properly design business processes. Mark Rutkiewicz draws upon his thirty years of experience in the medical device industry to present the framework, which seeks to: break down preconceived notions on implementing the requirements of applicable laws, regulations, guidance, standards, and internal policies; provide blueprints for every aspect (what, why, and how) of work at your company; promote transparent companywide information and the ability to quickly adopt changes; achieve modular and reusable business processes and master datasets across business functions; and move management controls to key business process metrics, instead of only financial considerations. The author synthesizes the best practices from Configuration Management II, Information Mapping, LEAN, Six Sigma, systems engineering, and the Capability Maturity Model for integration into a process-based, flexible architecture. Discover a new methodology for designing integrated business management processes and systems using a process approach that draws on the best practices of numerous fields with Consiliso.
