The new edition of an introduction to computer programming within the context of the visual arts, using the open-source programming language Processing; thoroughly updated throughout. The visual arts are rapidly changing as media moves into the web, mobile devices, and architecture. When designers and artists learn the basics of writing software, they develop a new form of literacy that enables them to create new media for the present, and to imagine future media that are beyond the capacities of current software tools. This book introduces this new literacy by teaching computer programming within the context of the visual arts. It offers a comprehensive reference and text for Processing (www.processing.org), an open-source programming language that can be used by students, artists, designers, architects, researchers, and anyone who wants to program images, animation, and interactivity. Written by Processing's cofounders, the book offers a definitive reference for students and professionals. Tutorial chapters make up the bulk of the book; advanced professional projects from such domains as animation, performance, and installation are discussed in interviews with their creators. This second edition has been thoroughly updated. It is the first book to offer in-depth coverage of Processing 2.0 and 3.0, and all examples have been updated for the new syntax. Every chapter has been revised, and new chapters introduce new ways to work with data and geometry. New “synthesis” chapters offer discussion and worked examples of such topics as sketching with code, modularity, and algorithms. New interviews have been added that cover a wider range of projects. “Extension” chapters are now offered online so they can be updated to keep pace with technological developments in such fields as computer vision and electronics. Interviews SUE.C, Larry Cuba, Mark Hansen, Lynn Hershman Leeson, Jürg Lehni, LettError, Golan Levin and Zachary Lieberman, Benjamin Maus, Manfred Mohr, Ash Nehru, Josh On, Bob Sabiston, Jennifer Steinkamp, Jared Tarbell, Steph Thirion, Robert Winter

It is a quiet, uneventful Saturday in Doncaster. Nick Aten, and his best friend Steve Price - troubled seventeen year olds - spend it as usual hanging around the sleepy town, eating fast food and planning their revenge on Tug Slatter, a local bully and their arch-enemy. But by Sunday, Tug Slatter becomes the last of their worries because somehow overnight civilization is in ruins. Adults have become murderously insane - literally. They're infected with an uncontrollable urge to kill the young. Including their own children. As Nick and Steve try to escape the deadly town covered with the mutilated bodies of kids, a group of blood-thirsty adults ambushes them. Just a day before they were caring parents and concerned teachers, today they are savages destroying the future generation. Will Nick and Steve manage to escape? Is their hope that outside the Doncaster borders the world is 'normal' just a childish dream? Blood Crazy, first published in 1995, is a gripping, apocalyptic horror from Simon Clark.

With Bioenergetic Basics... learn how your body may heal itself of over 250 diseases without drugs, as have thousands of students and patients of physician Isaac Goiz , by simply using two magnets. We all have bioenergy circulating around and through our body when well. Disease breaks that bioenergy apart into two unhealthy and oppositely charged biomagnetic poles. Magnets also have two energy poles that the body may use to heal itself of AIDS, leukemia, infections for which there are no drugs, tuberculosis, cancers, etc. So valuable are Goiz's concepts as described in this fully-illustrated art of dynamic wellness, they deserve a place in every home and library so thousands more may get well.

Framed by historic developments-from the Open Admissions movement of the 1960s and 1970s to the attacks on remediation that intensified in the 1990s and beyond-BASIC WRITING traces the arc of these large social and cultural forces as they have shaped and reshaped the field. GEORGE OTTE and REBECCA WILLIAMS MLYNARCZYK balance fidelity to the past with present relevance, local concerns with (presumptively) global knowledge, personal judgment with (apparent) objectivity. BASIC WRITING circles back on the same general story, looking for different themes or seeing the same themes from different perspectives. What emerges is a gestalt of Basic Writing that will give readers interested in its history, self-definition, pedagogy, or research a sense of the important trends and patterns. Otte and Mlynarczyk make research trajectories clear without oversimplifying them or denying the undeniable blurring, dissensus, and differential development that characterizes the field. GEORGE OTTE is a member of the doctoral faculty at the CUNY Graduate Center in the PhD Programs in English, Urban Education, and Interactive Technology and Pedagogy. He served as coeditor of the JOURNAL OF BASIC WRITING from 1996 to 2002. He is the coauthor with Nondita Mason of WRITERS' ROLES: ENACTMENTS OF THE PROCESS (Harcourt, 1994) and, with Linda Palumbo, of CASTS OF THOUGHT: WRITING IN AND AGAINST TRADITION (Macmillan, 1990). REBECCA WILLIAMS MLYNARCZYK has taught basic writing at the City University of New York since 1974. She is currently professor of English at the CUNY Graduate Center and Kingsborough Community College, where she codirects the ESL program. She is the author of CONVERSATIONS OF THE MIND: THE USES OF JOURNAL WRITING FOR SECOND-LANGUAGE LEARNERS (Erlbaum) and the coauthor, with Steven Haber, of IN OUR OWN WORDS: STUDENT WRITERS AT WORK (Cambridge). She has served as coeditor of the JOURNAL OF BASIC WRITING since 2003.

The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, net.datastructures. This package forms a coherent library of data structures and algorithms in Java specifically designed for educational purposes in a way that is complimentary with the Java Collections Framework.

"Chapter Goals" and "Chapter Goals Revisited" are two new features in this revision. Each chapter starts with a list of goals that allows students to see what is ahead. The chapter concludes with a repetition of

that list with summary information added. General ChemistryNow is correlated to this list. New to this edition are dozens of "Active Figures" to help students visualize chemistry in action. These animated versions of text art help students master key concepts from the book. "Active Figures" can be used as demonstrations in the classroom and each figure is paired with a guided exploration and exercise to ensure students understand the concept being illustrated. In-text worked "Examples" follow a four-part structure: "Problem" statement, "Strategy" for approaching the problem, fully worked "Solution," and, where appropriate, a "Comment" on the problem and solution. Through this approach, students learn how to approach a problem rather than merely learning to memorize problem types and memorized solution approaches. Exercises appear throughout the text so students can check their comprehension of the material. Answers are in an appendix. "Problem-Solving Tips" provide readers tips for determining how to approach and solve problems. "Chemical Perspectives" are essays that bring relevance and perspective to a study of chemistry. In order to put chemistry in its historical context, "Historical Perspective" essays describe the people who were key to developing the concepts of the chapter.
