Custom-designed for clinicians on the frontline of treatment and prevention of the human papillomavirus (HPV), this stand-alone handbook provides the scientific background needed to understand and administer the new HPV vaccines. Written by some of the discoverers of these vaccines, this accessible text explores the biology and epidemiology of HPV, F.A. Hayek (1899-1992), the co-leader of the Austrian free market school, embraced the transparently fraudulent assertion made by Donald McCormick, aka Richard Deacon, in The British Connection which accused A.C. Pigou, the co-leader of the Cambridge market failure school, of being a Soviet spy.

This book explores a little-studied arena that exists between science and technology, an arena in which a singular and important variety of open-ended, multi-purpose instrumentation is developed by practitioners (neither scientist nor engineer, call them research-technologists) for use in academia, industry, state metrology and technical services, and considerably beyond. The generic instrumentation designed in this almost subterraneously institutionalized/professionalized, interstitial arena fuels both science and engineering work. This involves intermittent crossings of the boundaries that demarcate and protect the conventional cognitive and artefact cultures familiar to many historians and sociologists. Research-technologists thereby comprise a distinctive (but never distinct) transverse science and technology culture that generates a species of pragmatic universality, which in turn provides multiple and diversified audiences with a common repertory of vocabularies, notational systems, images, and perhaps even paradigms. Research-technology practitioners deliver a lingua franca that contributes to cognitive, material, and social cohesion. Research-technology is about the complementarity between boundary-crossing and the stability/maintenance of boundaries.

Guidelines for Evaluating Water in Pit Slope Stability is a comprehensive account of the hydrogeological procedures that should be followed when performing open pit slope stability design studies. Created as an outcome of the Large Open Pit (LOP) project, an international research and technology transfer project on the stability of rock slopes in open pit mines, this book expands on the hydrogeological model chapter in the LOP project’s previous book Guidelines for Open Pit Slope Design (Read & Stacey, 2009; CSIRO PUBLISHING). The book comprises six sections which outline the latest technology and best practice procedures for hydrogeological investigations. The sections cover: the framework used to assess the effect of water in slope stability; how water pressures are measured and tested in the field; how a conceptual hydrogeological model is prepared; how water pressures are modelled numerically; how slope depressurisation systems are implemented; and how the performance of a slope depressurisation program is monitored and reconciled with the design. Guidelines for Evaluating Water in Pit Slope Stability offers slope design practitioners a road map that will help them decide how to investigate and treat water pressures in pit slopes. It provides guidance and essential information for mining and civil engineers, geotechnical engineers, engineering geologists and hydrogeologists involved in the investigation, design and construction of stable rock slopes.

This Technical Note discusses findings of interconnectedness and spillover analysis on Italy. The market-based measures of tail risks and interconnectedness among key banks and insurance companies in Italy have declined from their peak but remain at elevated levels. Although the stress on Banca Monte dei Paschi di Siena has been manifesting on its own, the market perception about the condition of the banks appears to be increasingly contaminating the market views on other Italian financial institutions. It is also observed that exogenous factors, such as the Italian sovereign, are the key source of systemic risk for the market pricing of Italian financial institutions.

*A unique collection of studies, the present volume sheds new light on central themes of Ibn Taymiyya's (661/1263-728/1328) and Ibn Qayyim al-Jawziyya's (691/1292-751/1350) thought and the relevance of their ideas to diverse Muslim societies. Investigating their positions in Islamic theology, philosophy and law, the contributions discuss a wide range of subjects, e.g. law and order; the divine compulsion of human beings; the eternity of eschatological punishment; the treatment of Sufi terminology; and the proper Islamic attitude towards Christianity. Notably, a section of the book is dedicated to analyzing Ibn Taymiyya's struggle for and against reason as well as his image as a philosopher in contemporary Islamic thought. Several articles present the influential legacy of both thinkers in shaping an Islamic discourse facing the challenges of modernity. This volume will be especially useful for students and scholars of Islamic studies, philosophy, sociology, theology, and history of ideas.*

This unique and comprehensive collection investigates the challenges posed to intellectual property by recent paradigm shifts in biology. It explores the legal ramifications of emerging technologies, such as genomics, synthetic biology, stem cell research, nanotechnology, and biodiscovery. Extensive contributions examine recent controversial court decisions in patent law such as Bilski v. Kappos, and the litigation over Myriad's patents in respect of BRCA1 and BRCA2 while other papers explore sui generis fields, such as access to genetic resources, plant breeders' rights, and traditional knowledge. The collection considers the potential and the risks of the new biology for global challenges such as access to health-care, the protection of the environment and biodiversity, climate change, and food security. It also considers Big Science projects such as biobanks, the 1000 Genomes Project, and the Doomsday Vault. The inter-disciplinary research brings together the work of scholars from Australia, Canada, Europe, the UK and the US and involves not only legal analysis of case law and policy developments, but also historical, comparative, sociological, and ethical methodologies.
