This report provides recommendations that architects, designers, contractors, developers, owners, and lessees of medium box retail buildings can use to achieve whole-building energy savings of at least 50% over ASHRAE Standard 90.1-2004. The recommendations are given by climate zone and address building envelope, fenestration, lighting systems, HVAC systems, building automation and controls, outside air treatment, service water heating, plug loads, and photovoltaic systems. The report presents several paths to 50% savings, which correspond to different levels of integrated design. These are recommendations only, and are not part of a code or standard. The recommendations are not exhaustive, but we do try to emphasize the benefits of integrated building design, that is, a design approach that analyzes a building as a whole system, rather than as a disconnected collection of individually engineered subsystems.

Of course, a book can never take the place of experts who wrote it, but this revised, updated, and expanded edition of Andersen Consulting's Netcentric and Client/Server Computing: A Practical Guide, is an important first step in acquiring the knowledge and skills you need to bring netcentric capabilities into your organization. The Bauhaus Ideal is both a picture book and a guidebook to the fascinating and enduring legacy of modernist design, and to the continuing influence of Bauhaus on interior design—not just on architecture, but also on furniture, glassware, tableware, and kitchen utensils: the whole range of domestic arts. This unique volume introduces modern design principles and examines them from an historically critical perspective. It concludes with some ideas for melding modern solemnity with postmodern irony. And in each phase the illustrations speak as eloquently as the text—the whole serves as a beautifully illustrated design memo.
