

British Herbal Pharmacopoeia

The African Herbal Pharmacopoeia (AfrHP) provides comprehensive, up to date botanical, commercial and phytochemical information on over fifty of the most important African medicinal plants. The technical data were made on plant samples sourced from across the continent. These monographs prepared by leading African scientists, have been reviewed by international experts. Additional data includes micro morphology of the plant material, distribution maps and TLC Chromatograms. These data are crucial for producers, collectors and traders in medicinal plants and extracts as well as researchers, manufacturers and practitioners. The scope, quality and standard of these herbal monographs are comparable to those prepared in Europe, North America and Asia. Whilst this is the very first edition, it is being proposed to proceed to a second edition, quickly, as more plant species will be covered.

Updated annually, the BP is the official, authoritative collection of standards for UK medicinal substances for human and veterinary use. The BP 2015 includes almost 3,500 monographs. All monographs and requirements of the European Pharmacopoeia are also reproduced in the BP, making it an essential reference for students, lecturers and researchers. The online product provides

subscribers with access to the British pharmacopoeia 2019, British pharmacopoeia (veterinary) 2019 and the current edition and supplements of British approved names. Concurrent access to the 2014 onwards is also available

The British Pharmacopoeia (BP) 2013 is the authoritative, current collection of standards for UK medicinal substances and the official source of all UK pharmaceutical quality standards. It is an essential reference for anyone involved in pharmaceutical research, development, manufacture and testing, and plays a vital role in ensuring that all medicinal substances on the UK market meet standards of safety, quality and efficacy. The BP comprises monographs, which set out the mandatory standards for active substances, excipients and formulated preparations, together with supporting General Notices, Appendices (test methods, reagents, etc) and Reference Spectra. Detailed information and guidance on various aspects of current pharmacopoeial policy and practice are provided in the Supplementary Chapters of the BP. The BP is supplied in a variety of formats designed for ease of use and a wide range of applications. The hard copy edition package comprises a boxed six volume set containing BP in five volumes and the BP (Veterinary) volume, plus single user access to the CD-ROM and BP Online via www.pharmacopoeia.co.uk, the dedicated BP

website. The online format is easy to network, allowing access for a specified number of users or across an entire organisation site.

The South African Herbal Pharmacopoeia: Monographs of Medicinal and Aromatic Plants is a collection of 25 original monographs of medicinal plants that are currently under commercialization or have the potential for commercialization into herbal medicinal products for the global marketplace. Chapters include a general overview covering synonyms, common names, conservation status, botany, geographical distribution, ethnopharmacology, commercialization, pharmacological evaluation, chemical profiling and quality control, including HPTLC fingerprint analysis, UPLC analysis, gas chromatography and mid-infrared spectroscopy analysis. Academics researching pharmacy and analytical chemistry will benefit from the detailed chemical profile on each species presented. Industrial manufacturers of herbal products, herbal medicines, cosmetics, food supplements, and national and international policymakers and regulators will benefit from the overview provided at the beginning of each chapter. Provides a comprehensive, up-to-date literature review on 25 medicinal plants of South Africa Documents quality control protocols for chemical fingerprinting and biomarker identification in plant material Includes updated safety profiles of medicinal plants In Contraception and Abortion from the Ancient World to the Renaissance, John Riddle showed, through

extraordinary scholarly sleuthing, that women from ancient Egyptian times to the fifteenth century had relied on an extensive pharmacopoeia of herbal abortifacients and contraceptives to regulate fertility. In *Eve's Herbs, Riddle* explores a new question: If women once had access to effective means of birth control, why was this knowledge lost to them in modern times? Beginning with the testimony of a young woman brought before the Inquisition in France in 1320, Riddle asks what women knew about regulating fertility with herbs and shows how the new intellectual, religious, and legal climate of the early modern period tended to cast suspicion on women who employed "secret knowledge" to terminate or prevent pregnancy. Knowledge of the menstrual-regulating qualities of rue, pennyroyal, and other herbs was widespread through succeeding centuries among herbalists, apothecaries, doctors, and laywomen themselves, even as theologians and legal scholars began advancing the idea that the fetus was fully human from the moment of conception. Drawing on previously unavailable material, Riddle reaches a startling conclusion: while it did not persist in a form that was available to most women, ancient knowledge about herbs was not lost in modern times but survived in coded form. Persecuted as "witchcraft" in centuries past and prosecuted as a crime in our own time, the control of fertility by "Eve's herbs" has been practiced by Western women since ancient times.

This clinical guide and practical reference is ideal for those who use and combine liquid herbal remedies for the individual needs of the patient. With three introductory chapters, 125 monographs, and various glossaries and appendices, it covers the fundamental concepts of using liquid herbals, including how the remedies are made, quality issues, and dosage guidelines. The monographs include full prescribing information that covers actions,

indications, contraindications, warnings and precautions, interactions, side effects, dosage, traditional usage, pharmacological research, clinical studies, and full references. Focuses solely on liquid herbal preparations — making it a must-have resource and the only book of its kind. Covers approximately 125 herb profiles in detail. Offers the widest range of research-backed information currently available on herbs. Begins with basic principles to give practitioners confidence in the accuracy and precision of their prescriptions. Written by one of the leading names in herbal medicine. Clinically relevant with quick access to dosage information, contraindications, and more.

This volume of the "IARC Monographs" provides an assessment of the carcinogenicity of 14 drugs and herbal products. The IARC Monographs Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to the drugs digoxin (widely prescribed for the treatment of chronic heart failure), pioglitazone (used for the treatment of type 2 diabetes mellitus), and hydrochlorothiazide (used to treat hypertension). Other agents evaluated included the drugs primidone, sulfasalazine, pentosan polysulfate sodium, and triamterene, and five herbal products (or their components): Aloe vera

whole leaf extract, goldenseal root powder, Ginkgo biloba leaf extract, kava extract, and pulegone. In view of the limited agent-specific information available from epidemiological studies, assessments of these agents relied mainly on carcinogenicity bioassays to reach conclusions as to the carcinogenic hazard to exposed humans.

Updated annually, the British Pharmacopoeia (BP) is the only comprehensive collection of authoritative official standards for UK pharmaceutical substances and medicinal products. It includes approximately 4,000 monographs which are legally enforced by the Human Medicines Regulations 2012. Where a BP monograph exists, medicinal products or active pharmaceutical ingredients sold or supplied in the UK must comply with the relevant monograph. All monographs and requirements of the European Pharmacopoeia (Ph. Eur.) are reproduced in the BP, making the BP a convenient and fully comprehensive set of standards that can be used across Europe and beyond.

Winner of the James A. Duke Award for Excellence in Botanical Literature Award from the American Botanical Council. Compiled by the American Herbal Pharmacopoeia, this volume addresses the lack of authoritative microscopic descriptions of those medicinal plant species currently in trade. It includes an atlas providing detailed text and graphic descri

The Western Herbal Tradition provides a comprehensive and critical exploration of the use of plant medicines through 2000 years of history from Dioscorides to the present day. It follows each of the 27 herbs through a wide range of key sources from European, Arabic and American traditions including Greek, Roman and Renaissance texts. A rich discussion of the historical texts is balanced with current application and research. The herbs have been selected on the basis of common use by practising herbalists. Each illustrated monograph contains: Species, identification and botanical description A study of the characterisation and medicinal

use of the plants consistently drawn from featured herbals which includes the authors' own translations from the Latin Assessment of past and current texts in the transmission of herbal knowledge Consideration of traditional therapeutics, including humoral and physiomedical approaches Suggestions towards a modern experiential approach through Goethean methodology Current evidence on pharmacological constituents Review of evidence on safety Recommendations for internal and external uses, prescribing and dosage Excellent illustrations accompany each monograph to aid learning First book to cover broader historical perspective and discussions of issues surrounding each herb Written by leading experts who are well known in the field Includes some monographs of which there is little material already available The bibliographic evidence provided could support applications for registration of Herbal Medicinal Products under the provisions of the Traditional Herbal Medicinal Product Directive An excellent valuable resource for everyone interested in herbal medicine

A History of Contraception and Abortion in the West

Trease and Evans' Pharmacognosy

African Herbal Pharmacopoeia

British Pharmacopoeia 2019 [single User Download]

British Pharmacopoeia 2009

This book consists of cutting-edge materials drawn from diverse, authoritative sources, which are sequentially arranged into a multipurpose, one-stop shop, user-friendly text. It is divided into four parts as follows: part 1: historical overview of some indigenous medical systems, an outline of the basic concepts of pharmacognosy, ethnopharmacology, common analytical methods for isolating and characterising phytochemicals, and the different methods for evaluating the quality, purity, and biological and pharmacological activities of plant extracts part 2: phytochemistry and mode of action of major plant metabolites part 3: systems-based phytotherapeutics, discussion on how the dysfunction of the main systems of the human body can be treated with herbal remedies part 4: 153 monographs of some medicinal plants commonly used around the world, including 63 on African medicinal plants. This book therefore demonstrates the scrupulous intellectual nature of herbalism, depicting it as a scientific discipline in its own right.

This encyclopedic reference work on pharmacognosy covers the study of those natural substances, principally plants, that find a use in medicine. Its popularity and longevity stem from the book's balance between classical (crude and powdered drugs' characterization and

examination) and modern (phytochemistry and pharmacology) aspects of this branch of science, as well as the editor's recognition in recent years of the growing importance of complementary medicines, including herbal, homeopathic and aromatherapy. No other book provides such a wealth of detail. A reservoir of knowledge in a field where there is a resurgence of interest - plants as a source of drugs are of growing interest both in complementary medicine fields and in the pharmaceutical industry in their search for new 'lead compounds'. Dr Evans has been associated with the book for over 20 years and is a recognised authority in all parts of the world where pharmacognosy is studied, his knowledge and grasp of the subject matter is unique. Meticulously referenced and kept up to date by the editor, new contributors brought in to cover new areas. New chapter on 'Neuroceuticals'. Addition of many new compounds recently added to British Pharmacopoeia as a result of European harmonisation. Considers development in legal control and standardisation of plant materials previously regarded as 'herbal medicines'. More on the study of safety and efficacy of Chinese and Asian drugs. Quality control issues updated in line with latest guidelines (BP 2007).

The Western Herbal Tradition is a comprehensive exploration of 27 plants that are central to the herbalist's repertoire. This fully illustrated colour guide offers analysis of these herbs through the examination of historical texts and discussion of current applications and research. Your practice of phytotherapy will be transformed as the herbal knowledge from these sources is illuminated and assessed. Each chapter offers clear information on identification, uses and recipes, as well as recommendations on safety, prescribing, dosage and full academic references. The Western Herbal Tradition reveals a deep understanding of the true essence of what each plant can offer, as well as a fascinating insight into the unique history of contemporary herbal practice. This book is a valuable resource for everyone interested in herbal medicine and its history.

Produced by the British Pharmacopoeia

Commission Secretariat, The British

Pharmacopoeia (BP) 2010 is the leading

collection of standards for UK medicinal products and pharmaceutical substances.

Now used in almost 100 countries, the BP remains an essential reference for all individuals and organisations working within pharmaceutical research and development, manufacture, and testing across the globe. Key Features: Legally effective in the UK from 1 January 2010, 40 new monographs for formulated preparations, New and revised monographs for Herbal and Complementary Medicines within their own section in Volume III, Additional standards for widely used unlicensed formulations, and European Pharmacopoeia 6th edition material up to and including Supplement 6.5. European Pharmacopoeia monographs are clearly distinguished and cross-referenced while a full index ensures easy access to the current legally binding UK standards.

This richly illustrated reference guide treats the subject of herbal medicines in an integrated fashion with reference to pharmacognosy, pharmacology and toxicology. It will help to enable internists, phytotherapists, physicians, healthcare practitioners as well as students to understand why, when and how herbal medicines can be used in the treatment of diseases. A great deal of pathology and therapeutic information is also included.

Numerous tables as well as figures clarify complex mechanisms and other information. The most important medicinal plants and drugs are illustrated with exceptional color plates.

2000 Years of Medicinal Plant Knowledge

The authoritative and comprehensive modern

textbook on western herbal medicine - now in its second edition This long-awaited second edition of Principles and Practice of Phytotherapy covers all major aspects of herbal medicine from fundamental concepts, traditional use and scientific research through to safety, effective dosage and clinical applications. Written by herbal practitioners with active experience in clinical practice, education, manufacturing and research, the textbook is both practical and evidence based. The focus, always, is on the importance of tailoring the treatment to the individual case. New insights are given into the herbal management of approximately 100 modern ailments, including some of the most challenging medical conditions, such as asthma, inflammatory bowel disease and other complex autoimmune and inflammatory conditions, and there is vibrant discussion around the contribution of phytotherapy in general to modern health issues, including health ageing. Fully referenced throughout, with more than 10, 000 citations, the book is a core resource for students and practitioners of phytotherapy and naturopathy and will be of value to all healthcare professionals - pharmacists, doctors, nurses - with an interest in herbal therapeutics. 50 evidence-based monographs, including 7 new herbs Rational guidance to phytotherapeutic strategies in the consulting room New appendices provide useful information on topics such as herbal actions, dosage

in children and reading and interpreting herbal clinical trials Comprehensive revision of vital safety data, including an extensive herb-drug interaction chart. 50 evidence-based monographs, including 7 new herbs Rational guidance to phytotherapeutic strategies in the consulting room New appendices provide useful information on topics such as herbal actions, dosage in children and reading and interpreting herbal clinical trials Comprehensive revision of vital safety data, including an extensive herb-drug interaction chart.

The British Pharmacopoeia has provided official standards for the quality of substances, medicinal products and articles used in medicine since its first publication in 1864. It is used in over 100 countries and remains an essential global reference in pharmaceutical research and development and quality control. This book explores how these standards have been achieved through a comprehensive review of the history and development of the pharmacopoeias in the UK, from the early London, Edinburgh and Dublin national pharmacopoeias to the creation of the British Pharmacopoeia and its evolution over 150 years. Trade in medicinal substances and products has always been global, and the British Pharmacopoeia is placed in its global context as an instrument of the British Empire as it first sought to cover the needs of countries such as India and latterly as part of its role

in international harmonisation of standards in Europe and elsewhere. The changing contents of the pharmacopoeias over this period reflect the changes in medical practice and the development of dosage forms from products dispensed by pharmacists to commercially manufactured products, from tinctures to the latest monoclonal antibody products. The book will be of equal value to historians of medicine and pharmacy as to practitioners of medicine, pharmacy and pharmaceutical analytical chemistry.

" British Pharmacopoeia" is the authoritative collection of standards for UK medicines and is an essential reference for anyone involved in pharmaceutical R&D, manufacture, testing and regulation.
