introduces beginners to basic aerodynamic principles and all aspects of model-building – from paint and tissue covering to radio-control flying.

Starting with the very basics, the author guides you through the essential skills and techniques needed to build a scale model aircraft to be proud of.

Concentrating on the construction of plastic kits in the popular scales, *Scale Aircraft Modelling* also looks at how to improve your model or create a different version by using specially manufactured components in plastic, resin and metal.

Topics include: Tools;

Construction tips; Painting tips; Biplane rigging; Detailing; Airliner modeling; Weathering; Advanced techniques; Using resin and vac-form parts; and Health and safety.

Resin model kits and conversion parts allow modellers to build unusual and obscure aircraft and aircraft variations.

However, working with resin requires different techniques and materials that modellers may not be familiar with. Using step-by-step construction photos and a detailed text, this book gives modellers the information they need to confidently tackle any resin

model aircraft project. Coverage includes a discussion of what resin is and how castings are produced, along with specific construction techniques, detailed information on tools and airbrushes, scales, glues and paints, conversions, resin and bare metal and how to properly display finished models. The techniques shown apply to any resin model kit or conversion, and much of the information applies to all model types and materials. With very little information available to help modellers build resin kits, this book will fill a gap on the shelves of many

scale models and now want to put them in a diorama context. This book is full of ideas and describes the way the author has made many of his world-renowned dioramas. This book is not about building the perfect model or diorama. It is about creating a snapshot of history, to freeze a moment in time and, about all, to tell a story. The beauty of building a diorama is that there is no right or wrong way to do it. It is entirely up to your creativity and imagination. The options are endless and

fascinating! This book describes more than twenty-five different dioramas and gives you a fantastic insight of how these were created. With more than 800 pictures and in-depth description, it gives you numerous tips and guidance which will help you building your own diorama. The Autor, Bjrjn Jacobsen, built his first scale model in 1957, 15 years old. Since then he has made numerous models, mostly WWII planes, but also many extraordinary dioramas. After years of modelling, he found it

more and more rewarding and challenging to make dioramas, because it required not only modelling skills but also a sense of realism and a lot of research and scratch building to get it as realistic as possible. It also gives him the opportunity to let the models tell their story - and a story, they always have. For years, he has posted his work to the many model groups around the world and he often has been asked to publish some of his amazing work. He has now taken those requests
