

## Bukh Dv 36 Me Technical Data

***A sparkling and eye-opening history of the Broadway musical that changed the world In the half-century since its premiere, Fiddler on the Roof has had an astonishing global impact. Beloved by audiences the world over, performed from rural high schools to grand state theaters, Fiddler is a supremely potent cultural landmark. In a history as captivating as its subject, award-winning drama critic Alisa Solomon traces how and why the story of Tevye the milkman, the creation of the great Yiddish writer Sholem-Aleichem, was reborn as blockbuster entertainment and a cultural touchstone, not only for Jews and not only in America. It is a story of the theater, following Tevye from his humble appearance on the New York Yiddish stage, through his adoption by leftist dramatists as a symbol of oppression, to his Broadway debut in one of the last big book musicals, and his ultimate destination—a major Hollywood picture. Solomon reveals how the show spoke to the deepest conflicts and desires of its time: the fraying of tradition, generational tension, the loss of roots. Audiences everywhere found in Fiddler immediate resonance and a usable past, whether in Warsaw, where it unlocked the taboo subject of Jewish history, or in Tokyo, where the producer asked how Americans could understand a story that is "so Japanese." Rich, entertaining, and original, Wonder of Wonders reveals the surprising and enduring legacy of a show about tradition that itself became a tradition. Wonder of wonders, miracle of miracles.***

***The protection mode of most available vaccines is based on antibody responses. Since efficient immune responses to many pathogens rely on activating all arms of the immune system, traditional vaccine development does not provide efficient protection against many diseases. Novel vaccination strategies need to allow presentation of antigens that activate the full array of the immune response in the right composition and should prevent pathogen entry by mobilizing the mucosal immune response. New technological advances optimize the immunogenicity of 'live' and sub-unit vaccines. This book offers an interdisciplinary overview on research and future strategies for rational vaccine design based on recent developments in molecular biology and immunology. It covers new aspects of the immunological interplay between prokaryotic and eukaryotic systems as well as achievements in the development of novel vaccine candidates. Chapters on edible vaccines, on vaccines against bioterror agents and on economical and safety aspects of novel vaccine development round off this title.***

***This three-volume series represents a comprehensive treatment of the beetles of Australia, a relatively under-studied fauna that includes many unusual and unique lineages found nowhere else on Earth.***

***Volume 2 contains 36 chapters, providing critical information and identification keys to the genera of the Australian beetle families included in suborders Archostemata, Myxophaga, Adephaga and several groups of Polyphaga (Scirtoidea, Hydrophiloidea, Scarabaeoidea, Buprestoidea and Tenebrionidae). Each chapter is richly illustrated in black and white drawings and photographs. The book also includes colour habitus figures for about 1000 Australian beetle genera and subgenera belonging to the families treated in this volume. This volume is a truly international collaborative effort, as the chapters have been written by 23 contributors from Australia, China, Czech Republic, Germany, Italy, Poland and USA.***

Each issue lists papers published during the preceding year.

Active implants are actually drug or protein-eluting implants that induce healing effects, in addition to their regular task, such as support. This effect is achieved by controlled release of the active agent to the surrounding tissue. This book will give a broad overview of biomaterial platforms used as basic elements of drug-eluting implants. It will include mainly coatings for vascular stents with controlled release of antiproliferative agents, wound dressings with controlled release of antibacterial agents, drug-eluting vascular

grafts, protein-eluting scaffolds for tissue regeneration, drug-eluting platforms for dental and other applications. Thus, both internal and external implants are described. The drug-eluting implants will be described in terms of matrix formats and polymers, incorporated drugs and their release profiles from the implants, as well as implant functioning. Smart polymeric systems, such as crosslinked poly-lactones, thermo and pH-sensitive hydrogels and poly(amido-amines), as well as novel basic structural elements, such as composite fibers and films, and nanostructures will be thoroughly described. The effect of the processing parameters on the microstructure and on the resulting drug release profiles, mechanical and physical properties, and other relevant properties, will be emphasized. The described new biomaterials approaches for active implants enhance the tools available for creating clinically important biomedical applications.

Accompanying CD-ROM contains annex tables detailing population attributable fractions, mortality, and disease burden for selected major risk factors.

*More than 70 million people worldwide are infected with hepatitis C virus, a major cause of liver cirrhosis, liver failure and hepatocellular carcinoma world-wide. In the last decade, this cancer has emerged as the second leading cause of cancer death and the global burden is increasing by two million new infections per year, mainly due to injection drug use. An effective vaccine will be the most effective means to contain the spread of this virus worldwide. The articles in this Research Topic describe the progress that has been made towards a preventive vaccine and the challenges that still need to be overcome to ultimately achieve this goal.*

*In a compelling history of the Jewish community in New York during four decades of mass immigration, Tony Michels examines the defining role of the Yiddish socialist movement in the American Jewish experience. The movement, founded in the 1880s, was dominated by Russian-speaking intellectuals, including Abraham Cahan, Mikhail Zametkin, and Chaim Zhitlovsky. Socialist leaders quickly found Yiddish essential to convey their message to the Jewish immigrant community, and they developed a remarkable public culture through lectures and social events, workers' education societies, Yiddish schools, and a press that found its strongest voice in the mass-circulation newspaper*

*Forverts. Arguing against the view that socialism and Yiddish culture arrived as Old World holdovers, Michels demonstrates that they arose in New York in response to local conditions and thrived not despite Americanization, but because of it. And the influence of the movement swirled far beyond the Lower East Side, to a transnational culture in which individuals, ideas, and institutions crossed the Atlantic. New York Jews, in the beginning, exported Yiddish socialism to Russia, not the other way around. The Yiddish socialist movement shaped Jewish communities across the United States well into the twentieth century and left an important political legacy that extends to the rise of neoconservatism. A story of hopeful successes and bitter disappointments, A Fire in Their Hearts brings to vivid life this formative period for American Jews and the American left.*

*The 4th edition of Viral Hepatitis covers comprehensively the entire complex field of infections caused by all of the different hepatitis viruses, which affect many millions of people throughout the world with considerable morbidity and mortality. Howard Thomas and Arie Zuckerman are joined by Anna Lok from the USA and Stephen Locarnini from Australia as Editors. They have recruited leading researchers and physicians from many countries, who have produced an authoritative account of current knowledge and research on this important infection, including new insights into immune response to HBV and HCV. The result is a comprehensive account on all aspects of viral hepatitis, including rapid advances in the diagnosis, management, treatment and prevention of a complex infection, which in the case of hepatitis B, C and D may lead to severe complications including chronic hepatitis, cirrhosis and hepatocellular carcinoma. The latest edition of Viral Hepatitis offers an essential resource of current information for hepatologists, gastroenterologists, infectious diseases specialists and other clinicians, researchers, public health physicians and National and International Health Authorities.*

This book is the essential guide for managers wishing to implement the benefits of Intellectual Capital thinking in their companies or

divisions. It serves as an easily accessible introduction to the subject area for the novice, giving the gist of what it is about and how it has developed, but above all it gives hands-on instructions on how to incorporate intellectual capital thinking in everyday business and how to use the tools provided for the management and measurement of intangible resources. Throughout the main part of the book, three different cases in separate boxes run in parallel with the body text. These are introduced in chapter 2 and illustrate how the tools are to be used, depending on what type of company wishes to implement these ideas. The three case companies are characterised as a manufacturing company, an R&D organisation and a network company. Smaller case stories about well-known global companies are also interspersed throughout the book.

This book caters specifically for the needs of prospective buyers of production and custom built boats, outlining the pros and cons of all types of boatbuilding materials. It will help owners decide what material is most suitable for their needs and how to customise and modify the boat to suit their particular requirements. With his vast experience of boat design, Bruce Roberts-Goodson gives advice (for both sail and powerboats) on: construction materials and methods special tools required suitable building sites designing and building the interiors engines for sail and power electrical systems for sail and power rigging, sail plans and keels plumbing and equipment Bruce Roberts-Goodson has a thriving boat design business, and with many hundreds of enquiries each day, he is well placed to know what questions customers want answered and what the current trends are.

***Metals have been used in boats for thousands of years, as components of the vessel's construction, as load-bearing parts of the rigging and steering systems, and for a wide variety of domestic and service duties. Due to misunderstandings of the properties of the metals used, and in some cases to questionable design and manufacture, there have been spectacular and sometimes tragic failures of boats' metalworking. These continue even today. This new book explains in layman's terms how a wide variety of metal alloys may best be selected, formed and manufactured to give optimum performance in***

***the typical conditions of a sailing or powered vessel. Subjects as wide-ranging as anodes, batteries, hulls, skin fittings and rigging components are described in detail, enabling the boat owner to select the preferred material for his vessel. This practical and instructional book will be of great interest to sailors, boat owners and those involved in boat maintenance, and is fully illustrated with 90 colour photographs and 20 diagrams.***

***The advent of the Information Society is marked by the explosive penetration of information technologies in all aspects of life and by a related fundamental transformation in every form of the organization. Researchers, business people and policy makers have recognized the importance of addressing technological, economic and social impacts in conjunction. For example, the rise and fall of the dot-com hype depended a lot on the strength of the business model, on the technological capabilities available to firms and on the readiness of the society and economy at large sustain a new breed of business activity. However, it is notoriously difficult to examine the cross-impacts of social, economic and technological aspects of the Information Society. This kind of work requires multidisciplinary work and collaboration on a wide range of skills. Social and Economic Transformation in the Digital Era addresses this challenge by assembling the latest thinking of leading researchers and policy makers. The book covers all key subject areas of the Information Society and presents innovative business models, case studies, normative theories and social explanations***

Covering the evaluation and management of every key disease and condition affecting newborns, Avery's Diseases of the Newborn, by D. A. Gleason and Sandra E. Juul, remains your #1 source for practical, clinically relevant information in this fast-changing field. You'll find the strategies you need to confidently diagnose and treat this unique patient population, in a full-color, easy-to-use single volume that focuses on the art of practice. Now in a thoroughly revised 10th Edition, this highly respected reference is an authoritative clinical resource for neonatal practice. Provides up-to-date information on every aspect of newborn evaluation and management in a new, visually improved format featuring numerous all-new, full-color illustrations integrated within each chapter. Includes greatly expanded Neurology and Hematology sections that highlight the knowledge and expertise of new co-editor, Dr. Sandra E. Juul. Features all-new chapters on Palliative Care, Gastroesophageal Reflux, Placental

Disorders, Transfusion Therapy, Hypertension, , and The Ear and Hearing Disorders, as well as expanded coverage of brain injury and neuroprotective strategies in the preterm and term infant. Contains new Key Points boxes at the beginning of every chapter. Brings you current topics such as the evolving epidemic of neonatal abstinence syndrome and the new clinical uses of ultrasound.

Recent research on skin immunity and the skin microbiome reveals the complexity of the skin and its importance in the development of immunity against arthropod-borne diseases. In diseases such as malaria, borreliosis, leishmaniasis, trypanosomiasis, etc., the skin interface has been an essential site for pathogens to hide from the immune system, and as a potential site of persistence. Only very few vaccines have been developed so far against these diseases, likely because of an insufficient understanding on the development of skin immunity against parasites and Arthropod Vectors expands our knowledge on the role of the skin interface during the transmission of arthropod-borne diseases and immunity. This work may support researchers who strive for developing more efficient diagnostic tools and vaccines. It also gives scientists and advanced students working in related areas a better insight on how humans and animals are attractive to arthropods to develop better strategies to set up transgenic arthropods. Offers the only compilation of research focusing on both the skin interface and arthropod vectors, with contributions from international experts Advances research in the effort toward generating more effective diagnostic tools and vaccines focusing on skin immunity. Can also serve as supplemental material for dermatology lectures or specialized lectures on medical entomology and skin immunity

Twenty-first century progress against infectious diseases is threatened by urbanization, population growth, war refugees, changing sex ratios, and a host of other factors that open doors to the transmission of deadly pathogens. Infectious Diseases in an Age of Change reports on the most important infectious diseases that are on the rise today because of changing conditions and identifies urgently needed public health measures. The book covers the full range of factors that shape the epidemiology of infectious diseases--from government policies to economic trends to family practices. From clinical characteristics, transmission, and other aspects, the book addresses major infectious threats--sexually transmitted diseases, Lyme disease, human cytomegalovirus, diarrheal diseases, dengue fever, hepatitis viruses, HIV, and malaria. The authors also look at the rising threat of drug-resistant strains of tuberculosis, rapid exhaustion of the weapons to fight bacterial infections, and prospects for vaccinations and eradication of pathogens. Infectious Diseases in an Age of Change will be important to public health policymakers, administrators, and providers as well as to epidemiologists and researchers.

Host Gene Responses to Infections

This is the first comprehensive book on human/animal gene responses to RNA viral infections, including prevalent, emerging and re-emerging RNA viruses such as HIV, SARS-CoV, West Nile virus, influenza virus and many others.

Human gene responses are reviewed by leading virologists worldwide in the following aspects: (i) the altered gene expression profiles at the transcriptional and translational levels detected with cutting-edge technologies such as cDNA microarray and proteomics; (ii) host innate and adapted immune responses to viral replication in target organs; (iii)

virus-activated signal transduction pathways in cell survival, apoptosis and autophagosomal pathways; and (iv) the small interfering RNA/microRNA-mediated gene silencing pathway, a recently characterized new host defense mechanism against viral infection. Organized into 29 highly accessible and well-illustrated chapters, this volume explores state-of-the-art knowledge of the molecular mechanisms of RNA virus infection and host?virus interactions. This comprehensive compilation of the altered gene expression profiles and signal transduction pathways in host cells in response to the majority of human/animal RNA viruses opens new directions for basic and clinical research on viral pathogenesis, and also provides valuable biomarkers for researchers to select gene targets in the development of diagnostic tests and antiviral therapeutics for a number of infectious diseases.
