Designed to complement the Mental Measurements Yearbooks, Tests in Print fills a pressing need for a comprehensive bibliography of all commercially available English language tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Tests in Print IV contains information on over four thousand instruments. Along with a brief description, entries includes population, scoring, pricing, publisher information, and a reference list of professional literature citing articles relevant to individual instruments. Indexes of titles, classified subjects, names, and scores, as well as a publisher's directory and index are included, with notations for out-of-print instruments. Information is given for tests in a wide range of areas, including education, psychology, counseling, management, health care, career planning, sociology, child development, social science, and

research. Tests in Print IV also provides a comprehensive index to the Mental Measurements Yearbook by directing readers to the appropriate volume for reviews of specific tests.

Robert and Denise Sedlak are noted for their work with mentally retarded young people. Teaching the Educable Mentally Retarded combines their training and experience to create an invaluable resource for both the practicing and beginning teacher of mildly retarded students. Practical suggestions, case studies, and real-life anecdotes are interwoven with research findings. The result is an up-to-date, comprehensive guide to handling the expected and unexpected situations teachers confront in the classroom. The book incorporates current trends in education, featuring sections on the use of instructional aides in the classroom and on the use of computers and other teaching technology in special education classes. The authors' style is clear and easy to follow, and the work is enhanced

through the copious use of charts and figures.

Child/adolescent development and behavior have been a traditional "concern" of primary health care providers. However, it was not until the mid-1960s that attempts were made to consolidate developmental-behavioral issues into an identifiably distinct fund of medical knowledge. During the ensuing two decades, developmental-behavioral and research subspecialty, within the framework of comprehensive health care for children. The influence of public advocacy groups, topic-dedicated journals, national professional specialty societies, subject-related continuing education programs, and federal legislation (PL94-142) has served to crystallize developmental-behavioral pediatric

consequence, during the past ten years significant modifications have restructured medical student and pediatric resident education, providing an emphasis on neurodevelopmental, educational, and psychosocial issues reflects changing priorities in traditional health care for children. The postgraduate and three-year training programs, was initiated to accommodate professional manpower needs in both academic and practice settings. Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology, child psychiatry, and general pediatrics. As a result there has been some confusion in diagnosis and management, as well as poorly defined terminology and classification schemas. With the birth of developmental pediatrics as a pediatric specialty, a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention, diagnosis, and management.

The aim of this book is to provide parents, staff and others involved with mentally handicapped children and adults with up-to-date basic information and advice in their management. Methods of care, treatment and management of a heterogeneous group of people such as the mentally handicapped must of necessity include many disciplines. This book is an attempt to bring the knowledge and experience of many people together. The size of the book could have been increased to include more detail on other aspects of the subject but this might easily have diminished its value as a convenient reference to as wide a readership as possible, both professional and non-professional.

The severely mentally handicapped and should have an application in most parts of the world. Much of the information and advice on services, and on treatment and management, is based on the experience of specialists working in the United Kingdom, this now being standard practice in most parts of the world.

This book is concerned with the growing number of secondary school students who cannot or do not read as well as they might or who do not find personal value and pleasure in reading. A great number of publications have warned teachers and administrators in secondary schools to place greater emphasis on reading, but these publications have not always indicated how adequate reading programs for each child can be developed. This book presents the ideas teachers and professors have offered for effective programs. Effective teaching must contribute to the development of the total student, therefore teachers must understand and make use of the student's general experience, and their existing reading patterns. By providing appropriate materials and instruction, the teacher can help each student develop to their maximum potential.
