New Perspectives on Structural Change is a comprehensive edited volume that outlines both the historical roots and state-of-the-art debates on the role of structural change in the process of economic development, including both orthodox and heterodox perspectives and contributions from prominent scholars in this field. The volume consists of four main sections. The first section covers the theoretical foundations of the structural change literature. The second section presents an empirical overview of the major trends of structural change, using up-to-date data sources and methods. The third section presents a broad ranging empirical analysis of the drivers of structural change. The fourth section examines how processes such as inclusive growth, poverty reduction, productive employment, the global income distribution, and environmental sustainability are affected by structural change, and how they can be influenced by policy. The Middle East and North Africa (MENA) are in disarray, and shifts in the field of energy have the potential to drastically affect the course of political and economic developments in the region.

Declining oil prices, skyrocketing domestic demand, the rise of unconventional oil and natural gas production in North America, as well as shifting patterns of global energy trade all put severe pressures on both producing and importing countries in the MENA region. Policy-makers are facing fundamental challenges in light of the duality of grand transformations in (geo)politics and energy. Changes in the field of energy require substantial political and economic reforms, affecting the very fabric of sociopolitical arrangements. At the same time, the MENA region's geopolitical volatility makes any such reforms extremely risky. Including contributions by academics and analysts from both inside and outside the MENA region, this volume explores the changes in global and regional energy, the impact of changing international energy dynamics on politics and economics in the MENA region, and the challenges that will result. This is essential reading for researchers, postgraduates, and professionals in Middle Eastern and North African politics, global energy governance and regionalism.

The relationship between the United States and China will be of critical importance to the world throughout the twenty-first century. In the West China's rise is often portrayed as a threat and China seen in negative terms. This book explores the dynamics of this crucial relationship. It looks in particular at what causes an international relationship to be perceived negatively, and considers what can be done to reverse this, arguing that trust is a key factor. It goes on to discuss US and Chinese rhetoric and behaviour in three key areas - climate change, finance, and international security. The book contends that, contrary to much US rhetoric, China's actions in these areas is often much more flexible and accommodating than the US position, and that the Chinese are much more knowledgeable about, and understanding and appreciative of, the United States than vice versa.

The proceedings of the "Economics and Business Competitiveness International Conference" (EBCICON) provides a selection of papers, either research results or literature reviews, on business transformation in the digital era. Nine major subject areas, comprising accounting and governance, customer relations, entrepreneurship, environmental issues, finance and investment, human capital, industrial revolution 4.0, international issues, and operations and supply chain management are presented in the proceedings. These papers will provide new insights into the knowledge and practice of business and economics in the digital era. Therefore, parties involved in business and economics such as academics, practitioners, business leaders, and others will be interested in the contents of the proceedings.

Celebrated Theologian Offers Wisdom for Civic Engagement Christian citizens have a responsibility to make political and ethical judgments in light of their faith and to participate in the public lives of their communities--from their local neighborhoods to the national scene. But it can be difficult to discern who to vote for, which policies to support, and how to respond to the social and cultural trends of our time. This nonpartisan handbook offers Christians practical guidance for thinking through complicated public issues and faithfully following Jesus as citizens of their countries. The book focuses on enduring Christian commitments that should guide readers in their judgments and encourages legitimate debate among Christians over how to live out core values. The book also includes lists of resources for further reflection in each chapter and "room for debate" questions to consider.

Self-Employment as Precarious Work

Early Experience and Future Prospects

Since the 1970s the long term decline in self-employment has slowed – and even reversed in some countries – and the prospect of ‘ being your own boss ’ is increasingly topical in the discourse of both the general public and within academia. Traditionally, self-employment has been associated with independent entrepreneurship, but increasingly it has become a form of precarious work. This book utilises evidence-based information to address both the current and future challenges of this trend as the nature of self-employment changes, as well as to demonstrate where, when and why self-employment has emerged as precarious work in Europe.

The local levels of economies have felt the impact of technological change and globalization. These forces have triggered the need to understand the dynamic mechanisms that enable locales to respond to such changes. For example, the downsizing of traditional employers because of a major loss in market share due to new competitors, acquisition by global firms, or off-shoring of production or services was traditionally thought to be beyond the scope of powers of local policy makers, thinkers, and business leaders. In the world of practice, those concerned about the economic performance of place-city, region or state-are increasingly focused on how to adapt to these trends and leverage their existing resources to respond to these global challenges as a positive opportunity. The Oxford Handbook of Local Competitiveness brings together some of the leading minds in the fields of business, economics, and the social sciences to identify, articulate, and analyze what influences and shapes local competitiveness and what places can do to enhance their economic performance. The contributors to the Handbook provide a body of systematic analyses suggesting that the local context is a critical element of the forces that shape competitiveness. The challenges to generate and sustain economic performance vary across places, and the factors and conditions that either enhance or impede competitiveness also are place-specific. Finally, the characteristics and nature of what constitutes success also vary across places. This Handbook is essential reading material for academics in the fields of economics and public policy, as well as business leaders who hope to gain a more in-depth understanding of their field. Informative and intellectually rigorous, The Oxford Handbook of Local Competitiveness is the definitive volume of scholarly analysis regarding the relationship between place and economic competition.

The Kingdom of Saudi Arabia has established itself as the twelfth-largest economy in the world, the largest West Asian economic power, world ' s largest oil producer, and a strong and capable force in international politics, particularly in the Sunni Islamic world. However, at present it is at crossroads. Should it continue as a ‘ kingdom ’ or usher in the process of inclusive political representation? This volume answers such questions and explores how the state is coping with domestic, regional and global developments to remain relevant in the changing times. It provides a holistic overview of a slew of economic, political, cultural, military and security policy measures that have been initiated by the government. The work also offers a detailed analysis of Saudi Arabia ' s relations with three significant powers — USA, China and India — and how they are evolving under new geopolitical and geostrategic dynamics. This book will interest strategists, policymakers, researchers and students of international relations, geopolitics, political science and political economy as well as the informed reader.

The recent financial crisis has sparked debates surrounding the nature and role of accounting in informing capital markets and regulatory bodies about the financial performance and position of a firm. These debates have drawn attention to the broader implications of accounting for the economy and society. Accounting and Business Economics brings together leading international scholars to examine the current state of accounting theory and its fundamental connection with the economics and finance of firms, viewing the business entity from not only accounting, but also national, economic, social, political, juridical, anthropological, and moral points of view.

This second edition of The Economics of Entrepreneurship is an essential resource for scholars following the current state of this fast-moving field, covering a broad range of topics in unparalleled depth. Designed to be used both as a textbook for specialist degree courses on the economics of entrepreneurship, and as a reference text for academic research in the field, the book draws on theoretical insights and recent empirical findings to show how economics can contribute to our understanding of entrepreneurship. New topics, such as crowdfunding, entrepreneurship education and microenterprise field experiments, appear for the first time, while existing treatments of topics like regional entrepreneurship, innovation and public policy are considerably deepened. Parker also discusses new empirical methods, including quasi-experimental methods and field experiments. Every section – indeed every page – of the new edition has been updated, resulting in a rigorous scientific account of entrepreneurship today.

Poverty and inequality are at record levels. Today, forty-seven million Americans live in poverty, while the median is in decline. The top 20 percent now controls 89 percent of all wealth. These conditions have renewed demands for a new economic Bill of Rights, an idea proposed by F. D. Roosevelt, Truman and Martin Luther King, Jr. The new Economic Bill of Rights has a coherent plan and proclaims that all Americans have the right to a job, a living wage, a decent home, adequate medical care, good education, and adequate protection from economic fears of unemployment, sickness and old age. Integrating the latest economic and social data, Ending Extreme Inequality explores each of these rights. Each chapter includes: an analysis of the social problems surrounding each right; a historical overview of the attempts to right these wrongs; and assessments of current solutions offered by citizens, community groups and politicians. These contemporary, real-life solutions to inequality can inspire students and citizens to become involved and open pathways toward a more just society.

The Great American Recession resulted in the loss of eight million jobs between 2007 and 2009. More than four million homes were lost to foreclosures. Is it a coincidence that the United States witnessed a dramatic rise in household debt in the years before the recession—that the total amount of debt for American households doubled between 2000 and 2007 to \$14 trillion? Definitely not. Armed with clear and powerful evidence, Atif Mian and Amir Sufi reveal in House of Debt how the Great Recession and Great Depression, as well as the current economic malaise in Europe, were caused by a large run-up in household debt followed by a significantly large drop in household spending. Though the banking crisis captured the public's attention, Mian and Sufi argue strongly with actual data that current policy is too heavily biased toward protecting banks and creditors. Increasing the flow of credit, they show, is disastrously counterproductive when the fundamental problem is too much debt. As their research shows, excessive household debt leads to foreclosures, causing individuals to spend less and save more. Less spending means less demand for goods, followed by declines in production and huge job losses. How do we end such a cycle? With a direct attack on debt, say Mian and Sufi. More aggressive debt forgiveness after the crash helps, but as they illustrate, we can be rid of painful bubble-and-bust episodes only if the financial system moves away from its reliance on inflexible debt contracts. As an example, they propose new mortgage contracts that are built on the principle of risk-sharing, a concept that would have prevented the housing bubble from emerging in the first place. Thoroughly grounded in compelling economic evidence, House of Debt offers convincing answers to some of the most important questions facing the modern economy today: Why do severe recessions happen? Could we have prevented the Great Recession and its consequences? And what actions are needed to prevent such crises going forward?

As a consequence of globalization, news, ideas and knowledge are moving quickly across national borders and generating international spillovers. So too, however, are economic and financial crises. Combining a variety of methods, concepts and interdisciplinary approaches, this book provides an in-depth examination of these structural changes and their impact. Assessing the implications of globalization for businesses and sectors, chapters focus on the interdependencies between different economic and political layers, and explore topics such as human capital, creativity, innovation, networks and collaboration.

This book conceptualises and develops crowdsourcing as an organisational business process. It argues that although for many organisations crowdsourcing still implies an immature one-off endeavour, when developed to a more repeatable business process it can harness innovation and agility. The book offers a process model to guide organisations towards the establishment of business process crowdsourcing (BPC), and empirically showcases and evaluates the model using two current major crowdsourcing projects. In order to consolidate the domain knowledge, the BPC model is turned into a heavyweight ontology capturing the concepts, hierarchical relationships and decision-making relationships necessary to establish crowdsourcing as a business process in an organisation. Lastly, based on the ontology it presents a decision tool that provides advice on making informed decisions about the performance of business process crowdsourcing activities.

We Are Better Than This fundamentally reframes budget debates in the United States. Author Edward D. Kleinbard explains how the public's preoccupation with tax policy alone has obscured any understanding of government's ability to complement the private sector through investment and insurance programs that enhance the general welfare and prosperity of our society at large. He argues that when we choose how government should spend and tax, we open a window into our "fiscal soul," because those choices are the means by which we express the values we cherish and the regard in which we hold our fellow citizens. Though these values are being diminished by short-sighted decisions to starve government, strategic government spending can directly make citizens happier, healthier, and even wealthier. Expertly combining the latest economic research with his insider knowledge of the budget process into a simple yet compelling narrative, he unmasks the tax mythologies and false arguments that too often dominate contemporary discourse about budget policies. Large quantities of comparative data are succinctly distilled to situate the United States among its peer countries, so that readers can judge for themselves whether contemporary budget choices really reflect our aspirational fiscal soul. Kleinbard's presentation takes a multi-disciplinary approach, drawing on economics, finance, law, political science and moral philosophy. He uniquely weaves economic research and moral philosophy together by emphasizing our welfare, not just our national income, and by contrasting the actual beliefs of Adam Smith, a great moral philosopher, with the cartoon version of the man presented by proponents of the most extreme forms of private market triumphalism.

Seminar paper from the year 2013 in the subject Business economics - Economic Policy, grade: 2.0, University of Applied Sciences Berlin, language: English, comment: Analysis of the Italian economic development after joining the European Monetary Union with special regard to Robert Mundell's Theory of Optimum Currency Areas, abstract: After a successful launch of the Euro and some beneficial years for the countries in the European Monetary Union enjoying low interest rates, the bankruptcy of Lehman Brothers in 2008 triggered a global financial and economic crisis which especially in the European Monetary Union turned into a sovereign debt crisis. Based on the ninth edition of Paul De Grauwe's book "Economics of Monetary Union," this paper analyzes Italy's economic development in the last years and shows the benefits and costs for Italy of being in the European Monetary Union with special regard to Robert Mundell's theory of optimum currency areas (OCA-theory) (1961), the occurrence of asymmetric tendencies/shocks, their relevance for the country, and the question of overcoming of those shocks. In the end a clear answer is given if it was a good or a bad decision for Italy and its economy to join the European Monetary Union.
