The study of the Bible has long included a literary aspect with great attention paid not only to what was written but also to how it was expressed. The detailed analysis of biblical books and passages as written texts has benefited from the study of literature in classical philology, ancient rhetoric, and modern literary criticism. This volume of the Lexham Methods Series introduces the various ways the study of literature has been used in biblical studies. Most literary approaches emphasize the study of the text alone—its structure, its message, and its use of literary devices—rather than its social or historical background. The methods described in Literary Approaches to the Bible are focused on different ways of analyzing the text within its literary context. Some of the techniques have been around for centuries, but the theories of literary critics from the early 20th century to today had a profound impact on biblical interpretation. In this book, you will learn about those literary approaches, how they were adapted for biblical studies, and what their strengths and weaknesses are.

In the past, practical applications motivated the development of mathematical theories, which then became the subject of study in pure mathematics where abstract concepts are studied for their own sake. The activity of applied mathematics is thus intimately connected with research in pure mathematics, which is also referred to as theoretical mathematics. Theoretical and Applied Mathematics in International Business is an essential research publication that explores the importance and implications of applied and theoretical mathematics within international business, including areas such as finance, general management, sales and marketing, and supply chain management. Highlighting topics such as data mining, global economics, and general management, this publication is ideal for scholars, specialists, managers, corporate professionals, researchers, and academicians.

"Seventh graders relish their growing sense of control over their own lives and their sense of agency. In this first unit of the year, Writing Realistic Fiction: Symbolism, Syntax, and Truth, students write engaging short fiction. They lift the sophistication of their writing through attention to individual scenes, symbols, and writing techniques they've discovered from

close readings of powerful short fiction. Next, in Unit 2, Writing About Reading: From Reader's Notebooks to Companion Books, students learn to analyse the craft and structure of the authors they admire and to write for real audiences about why that craft matters. Finally, in Unit 3, The Art of Argument: Research-Based Essays, students learn to write essays that

build convincing, nuanced arguments, balancing evidence and analysis to persuade readers to shift their beliefs or take action"--pearson.com.
