

Button On Taxis Licensing Law And Practice

This report of the President's Commission on Law Enforcement and Administration of Justice - established by President Lyndon Johnson on July 23, 1965 -- addresses the causes of crime and delinquency and recommends how to prevent crime and delinquency and improve law enforcement and the administration of criminal justice. In developing its findings and recommendations, the Commission held three national conferences, conducted five national surveys, held hundreds of meetings, and interviewed tens of thousands of individuals. Separate chapters of this report discuss crime in America, juvenile delinquency, the police, the courts, corrections, organized crime, narcotics and drug abuse, drunkenness offenses, gun control, science and technology, and research as an instrument for reform. Significant data were generated by the Commission's National Survey of Criminal Victims, the first of its kind conducted on such a scope. The survey found that not only do Americans experience far more crime than they report to the police, but they talk about crime and the reports of crime engender such fear among citizens that the basic quality of life of many Americans has eroded. The core conclusion of the Commission, however, is that a significant reduction in crime can be achieved if the Commission's recommendations (some 200) are implemented. The recommendations call for a cooperative attack on crime by the Federal government, the States, the counties, the cities, civic organizations, religious institutions, business groups, and individual citizens. They propose basic changes in the operations of police, schools, prosecutors, employment agencies, defenders, social workers, prisons, housing authorities, and probation and parole officers. This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving". This concise handbook is designed for anyone involved in hackney carriage or private hire vehicle licensing and explains the law and procedure concerning it and the overlaps and conflicts between the two areas. In addition to a narrative outlining the law, the author makes use of flow charts, case digests, relevant legislation and a comprehensive range of draft forms for use by local authorities, giving the reader a step-by-step guide to this area of law. Offering a practical approach, this book provides the reader with a helpful overview of both hackney carriages and private hire vehicles and the licensing regime that controls them.

Rules governing taxis and private hire vehicles need urgent and wholesale reform. The problems posed by taxis and private hire vehicles (PHVs) operating outside of the district in which they are licensed - the phenomenon called 'cross-border hire' - cannot be solved without new legislation. In this report the Transport Committee puts forward its recommendations for such new legislation: Listen to the views of users; keep it simple; keep it local; licensing should remain a local function; permit tighter restrictions on cross border hire; increase the potential for local authorities to work together to create larger licensing districts; and develop

*Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.*

A visual guide to the way the world really works Every day, every hour, every minute we are bombarded by information - from television, from newspapers, from the internet, we're steeped in it, maybe even lost in it. We need a new way to relate to it, to discover the beauty and the fun of information, for information's sake. No dry facts, theories or statistics. Instead, Information is Beautiful contains visually stunning displays of information that blend the facts with their connections, their context and their relationships - making information meaningful, entertaining and beautiful. This is information like you have never seen it before - keeping text to a minimum and using unique visuals that offer a blueprint of modern life - a map of beautiful colour illustrations that are tactile to hold and easy to flick through but intriguing and engaging enough to study for hours.

Now available: *Nudge: The Final Edition* The original edition of the multimillion-copy New York Times bestseller by the winner of the Nobel Prize in Economics, Richard H. Thaler, and Cass R. Sunstein: a revelatory look at how we make decisions—for fans of Malcolm Gladwell' s Blink, Charles Duhigg' s The Power of Habit, James Clear' s Atomic Habits, and Daniel Kahneman' s Thinking, Fast and Slow Named a Best Book of the Year by The Economist and the Financial Times Every day we make choices—about what to buy or eat, about financial investments or our children' s health and education, even about the causes we champion or the planet itself! Unfortunately, we often choose poorly. Nudge is about how we make these choices and how we can make better ones. Using dozens of eye-opening examples and drawing on decades of behavioral science research, Nobel Prize winner Richard H. Thaler and Harvard Law School professor Cass R. Sunstein show that no choice is ever presented to us in a neutral way, and that we are all susceptible to biases that can lead us to make bad decisions. But by knowing how people think, we can use sensible "choice architecture" to nudge people toward the best decisions for ourselves, our families, and our society, without restricting our freedom of choice.

When did you last read yours? For over 80 years The Highway Code has been the official guide to using the roads safely and legally. It has contributed enormously to road safety and reliable road transport. However, every day, on average five people are killed and just over 60 people are seriously injured in road collisions. So it is as important as ever that all road users, including drivers, motorcyclists, cyclists, horse riders and pedestrians, should update their knowledge of The Highway Code. The Highway Code - for life, not just for learners.

The fourth edition of Button on Taxis completely updates the text to take account of changes to legislation, case law and Guidance since the publication of the third edition. These include important Senior Court decisions relating to adoption of legislation, local authority decision-making processes, licence fees, Hackney carriage ranks, suitability of drivers and action against licensed vehicles. The legislative changes include extensions to the duration of certain licences and the ability for private hire operators to subcontract across local authority boundaries.In addition, the impact of booking systems such as Uber is considered together with the Law Commission's proposals for reform of Hackney carriage and private hire legislation.This new edition will provide a timely update to what is acknowledged as an essential handbook for the taxi licensing practitioner.

The Cambridge Handbook of the Law of the Sharing Economy

New Challenges of Data Technologies

This book comprehensive compares Georgia’s new evidence code with the corresponding federal evidence rule and prior Georgia evidence law, providing detailed commentary for those new Georgia rules with federal counterparts. It takes the reader through statutory provisions in the new code from OCGA 24-1-1 through 24-10-1088. Carlson on Evidence is presented in a user friendly format, with new Georgia evidence statutes placed at the top of every page of analysis for easy access in the courtroom or office. Each rule section contains the number and text of the new Georgia evidence provisions, a summary of 2013 changes, comparison with the Federal Rules of Evidence, and Federal and Georgia case law"--Publisher's website.

Controversy shrouds sharing economy platforms. It stems partially from the platforms' economic impact, which is felt most acutely in certain sectors: Uber drivers compete with taxi drivers; Airbnb hosts compete with hotels. Other consequences lie elsewhere: Uber is associated with a trend toward low-paying, precarious work, whereas Airbnb is accused of exacerbating real estate speculation and raising the cost of long-term rental housing. While governments in some jurisdictions have attempted to rein in the platforms, technology has enabled such companies to bypass conventional regulatory categories, generating accusations of 'unfair' competition" as well as debates about the merits of existing regulatory regimes. Indeed, the platforms blur a number of familiar distinctions, including personal versus commercial activity; infrastructure versus content; contractual autonomy versus hierarchical control. These ambiguities can stymie legal regimes that rely on these distinctions as organizing principles, including those relating to labour, competition, tax, insurance, information, the prohibition of discrimination, as well as specialized sectoral regulation. This book is organized around five themes: technologies of regulation; regulating technology; the sites of regulation (local to global); regulating markets; and regulating labour. Together, the chapters offer a rich variety of insights on the regulation of the sharing economy, both in terms of the traditional areas of law they bring to bear, and the theoretical perspectives that inform their analysis. This book is published in English. - La controversie entoure les plateformes d'économie de partage, partiellement en raison de leur impact économique. Certains secteurs subissent des contrecoups de manière plus aigüe : les chauffeurs d'Uber font concurrence aux chauffeurs de taxi, ou les hôtes Airbnb rivalisent avec les hôtels. Par ailleurs, Uber exacerberait l'emploi précaire et mal rémunéré tandis qu'Airbnb amplifierait la spéculation immobilière et entrainerait, à terme, une hausse du coût de location. On a tenté de réglementer ce type de plateformes, mais la technologie est telle qu'elle permet aux entreprises d'éviter de contourner la réglementation conventionnelle, si bien que les accusations de « concurrence déloyale » fusent de toutes parts, provoquant une remise en question du cadre réglementaire. En effet, de telles plateformes viennent brouiller les cartes, confondant les distinctions convenues entre personnel et commercial, infrastructure et contenu, autonomie contractuelle et contrôle hiérarchique. Cette ambiguïté peut avoir d'importantes répercussions sur le bon fonctionnement de l'appareil réglementaire qui encadre les principes organisateurs du travail, de la concurrence, de l'impôt, de l'assurance, de l'information et de l'interdiction de la discrimination, sans parler de la réglementation sectorielle spécialisée. Cinq thématiques sont abordées dans cet ouvrage : les technologies de la réglementation; la réglementation de la technologie; les lieux de la réglementation (du local au mondial); la réglementation des marchés; et de la réglementation du travail. Les chapitres se conjuguent pour offrir une réflexion d'une gamme d'experts sur la jurisprudence traditionnelle que sur les approches théoriques qui informent et façonnent la réglementation de l'économie de partage. Ce livre est publié en anglais.

The tool kit will vary among jurisdictions depending on basic legal constraints, community attitudes, road system and traffic characteristics, and resources. The Transportation Research Board (TRB) undertook a study to identify the sources of safety improvements in other countries. Researchers do not have a complete understanding of the underlying causes of long-term trends in crashes and fatalities. Differences among countries are in part attributable to factors other than government safety policies. To identify keys to success, the TRB study committee examined specific safety programs for which quantitative evaluations are available and relied on the observations of safety professionals with international experience. The committee's conclusions identify differences between U.S. and international practices that can account for some differences in outcomes. The committee recommendations, which are addressed to elected officials and to transportation safety administrators, identify actions needed in the United States to emulate the successes that other countries have achieved. The recommendations do not comprehensively address all aspects of traffic safety programs but rather address areas of practice that are highlighted by the international comparisons and for which credible evidence of effectiveness is available."--pub. desc.

This guide is designed for musicians and music professionals who wish to hone their knowledge of the music business. It is intended as a practical tool to help composers, performers and all those involved in the music world get into the specifics of the management of their intellectual property rights. The guide aims to provide instructive advice on how to build a successful career in music in both developed and developing countries, by generating income from musical talent.

Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing deaths per year of certain cancers, HIV/AIDS, and drownings among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these deaths and injuries, but progress has been incremental and has stagnated recently. Getting Zero Alcohol-Impaired Driving Fatalities examines which interventions (program systems, and policies) are most promising to prevent next injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities.

The goal of the book is to present the latest research on the new challenges of data technologies. It will offer an overview of the social, ethical and legal problems posed by group profiling, big data and predictive analysis and of the different approaches and methods that can be used to address them. In doing so, it will help the reader to gain a better grasp of the ethical and legal conundrums posed by group profiling. The volume first maps the current and emerging uses of new data technologies and clarifies the promises and dangers of group profiling in real life situations. It then balances this with an analysis of how far the current legal paradigm grants group rights to privacy and data protection, and discusses possible routes to addressing these problems. Finally, an afterward gathers the conclusions reached by the different authors and discusses future perspectives on regulating new data technologies.

Voices that Shaped the Abortion Debate Before the Supreme Court's Ruling

As the country that inspires the world with 'gross national happiness' development philosophy, Bhutan is striving to pursue its economic growth while committing to its core values of inclusive and green development. Even with robust economic growth rates, Bhutan's dependence on imports and hydropower revenues drives the country to search for self-reliant option to fuel the economy while ensuring no industry is left behind. Globally, electric vehicles market and technology are still in the nascent stage but are developing rapidly. The automotive industry has adopted electrification as a pillar of future drive train technology. EV uptake is expected to increase significantly with on the global market. This report aims to help Bhutan think through various technical and policy issues of introducing electric vehicles in its own context. It analyses a variety of factors that will impact adoption of electric vehicles from technical, market and financial feasibility to consumer awareness and stakeholders' capacity. It also addresses several policy questions which are at the heart of such program, economic costs and benefits, distributional impact, fiscal, and macroeconomic implications. Drawing from vast international experiences, the report examines in great technical details how global cutting-edge technology like electric vehicles could be pursued in the context of developing economies with different socio-economic characteristics and constraints compared to advanced economies and social challenges as well as opportunities in initiating electric vehicles program and provide practical recommendations that will be useful for policy makers in designing their own EV initiative.

Taxi licensing is fraught with complicated issues. Button on Taxis, 3 edn, clearly explains the law and procedure relating to the licensing of hackney carriages and private hire vehicles both inside and outside London. This new edition highlights the overlaps and conflicts that exist, so providing invaluable analysis and commentary. The most up-to-date coverage of taxi licensing law Now in its third edition this account of the legislative changes and developments affecting taxi licensing law, including: • The Disability Discrimination Act 2005 • the Road Safety Act 2006 • the DTf's Good Practice Guide Fully updated with all the latest case law since the last edition, it provides coverage on: • Brentwood Borough Council v Gladen 2004 Admin Crt • R (on the application of Johnson) v Reading Borough Council 2004 Admin Crt • Chorley Borough Council v Thomas QBD 2001 Admin Crt • Key Cabs Ltd v A Taxifast v Plymouth City Council 2007 Admin Crt • Darlington BC v Kaye 2005 Admin Crt • R v Chester Crown Court (app Wrexham CBC) 2004 Admin Crt • Tetford v Wrexham Borough Council v Ahmed 2006 Admin Crt. Singh v Solihull Metropolitan Borough Council 2007 Admin Crt and Sedgfield Borough Council v Wrexham Borough Council 2007 Admin Crt. This invaluable reference book also includes coverage of important areas, such as how to appeal against decisions, fees and the impact of criminal convictions, procedural flowcharts and a glossary.

This publication contains official guidance on correct road usage, applicable to all road users. Many of the rules of the Code are legal requirements and failure to comply with them constitutes a criminal offence. It provides information for drivers, pedestrians, cyclists, motorcyclists and horse riders, including instructions concerning animals, driving in adverse weather conditions, motorway driving level crossings, signals and traffic signs, road and vehicle markings, vehicle maintenance safety and security, licence requirements and documentation, and first aid on the road. This updated edition also covers recent changes in legislation (2004), including regulations on the use of mobile phones. ISBN 0115526986 supersedes the 2004 revised ed. (ISBN 0115524495). Please note that ISBN 0115526986 is not available in the United States.

Disruption, Regulation, and Reconfiguration

The Challenge of Crime in a Free Society

CDL Study Guide Book

Before Roe v. Wade

This consultation paper presents the Law Commission's provisional proposals for reform of the legal framework relating to taxis and private hire vehicles. Taxis and private hire vehicles (PHVs) are an important part of local transport. They operate in highly regulated markets where safety and quality control are paramount. Licensing covers key areas such as the quality of services, the fitness of drivers, fare regulation and restrictions on the number of licenses issued. The current law on taxis and PHVs has been criticised for being complex and outdated. These proposals retain the important distinction between taxis - which can "ply for hire" on the street or a cab rank - and private hire vehicles which can only be pre-booked. But all vehicles would be subject to national minimum safety standards and, for private hire vehicles, these would replace more than 340 sets of local regulations. This will reduce the burden on business because, once appropriately licensed, a private hire firm could work freely across the country, without geographical restrictions. This would contribute to widening consumer choice and to making services cheaper and more competitive. The Commission also makes suggestions covering a wide range of issues, including improving provision for persons with disabilities, quantify restrictions and enforcement. [Law Commission website]

For the first time, England and Wales have a national licensing scheme for the entire range of sex establishments. In Sex Licensing, Kolvin deals with the law, procedures and philosophy of the legislation, and places it in its historical and political context. Sex Licensing sets out to inform all involved in the licensing of the commercial sex industry how policy, the application process and the decision-making can all be geared to achieving a pattern and quantum of sex establishments which meets the local authority's aspirations for its area.

WTF? can be an expression of amazement or an expression of dismay. In today's economy, we have far too much dismay along with our amazement, and technology bears some of the blame. In this combination of memoir, business strategy guide, and call to action, Tim O'Reilly, Silicon Valley's leading intellectual and the founder of O'Reilly Media, explores the upside and the potential downsides of today's WTF? technologies. What is the future when an increasing number of jobs can be performed by intelligent machines instead of people, or done only by people in partnership with those machines? What happens to our consumer based societies—to workers and to the companies that depend on their purchasing power? It is income inequality and unemployment an inevitable consequence of technological advancement, or are there paths to a better future? What will happen to business when technology-enabled networks and marketplaces are better at deploying talent than traditional companies? How should companies organize themselves to take advantage of these new tools? What's the future of education when on-demand learning outperforms traditional institutions? How can individuals continue to adapt and retrain? Will the fundamental social safety nets of the developed world survive the transition, and if not, what will replace them? O'Reilly is "the man who can really can make a whole industry happen," according to Eric Schmidt, Executive Chairman of Alphabet (Google.) His genius over the past four decades has been to identify and to help shape our response to emerging technologies with world shaking potential—the World Wide Web, Open Source Software, Web 2.0, Open Government data, the Maker Movement, Big Data, and now AI. O'Reilly shares the techniques he's used at O'Reilly Media to make sense of and predict past innovation waves and applies those same techniques to provide a framework for thinking about how today's world-spanning platforms and networks, on-demand services, and artificial intelligence are changing the nature of business, education, government, financial markets, and the economy as a whole. He provides tools for understanding how all the parts of modern digital businesses work together to create marketplace advantage and customer value, and why ultimately, they cannot succeed unless their ecosystem succeeds along with them. The core of the book's call to action is an exhortation to businesses to DO MORE with technology rather than just using it to cut costs and enrich their shareholders. Robots are going to take our jobs, they say. O'Reilly replies, "Only if that's what we ask them to do! Technology is the solution to human problems, and we won't run out of work till we run out of problems." Entrepreneurs need to set their sights on how they can use big data, sensors, and AI to create amazing human experiences and the economy of the future, making us all richer in the same way the tools of the first industrial revolution did. Yes, technology can eliminate labor and make things cheaper, but at its best, we use it to do things that were previously unimaginable! What is our poverty of imagination? What are the entrepreneurial leaps that will allow us to use the technology of today to build a better future, not just a more efficient one? Whether technology brings the WTF? of wonder or the WTF? of dismay isn't inevitable. It's up to us!

Between Public and Private Mobility

Scenarios, Implications, and Economic Impact

Reforming the law of taxi and private hire services

Artificial Intelligence (AI) technologies are transforming economies, societies, and geopolitics. Enabled by the exponential increase of data that is collected, transmitted, and processed transnationally, these changes have important implications for international economic law (IEL). This volume examines the dynamic interplay between AI and IEL by addressing an array of critical new questions, including: How to conceptualize, categorize, and analyze AI for purposes of IEL? How is AI affecting established concepts and rubrics of IEL? Is there a need to reconfigure IEL, and if so, how? Contributors also respond to other cross-cutting issues, including digital inequality, data protection, algorithms and ethics, the regulation of AI for e-cases (autonomous vehicles), and systemic shifts in e-commerce (digital trade) and industrial production (fourth industrial revolution). This title is also available as Open Access on Cambridge Core.

Explores the meaning of intellectual property in the new high-tech digital age, addressing the legal, social, and economic factors at work and provides a thought-provoking argument that those qualities that have made the Internet a dynamic force for creativity, freedom, and innovation could destroy the Internet's potential. Reprint. 25,000 first printing.

Designed for the busy licensing officer, practitioner, elected member, statutory consultee or operator involved in licensing. This book explains various licensing regimes, including the complete syllabus for the NCLP.

"TRB Special Report 419 analyzes the ways that innovative transportation services--including ridesharing, carsharing, bikesharing, and microtransit--are changing mobility for millions of travelers. Such services could reduce congestion and emissions from surface transportation if regulated wisely to encourage concurrent, instead of sequential, ridesharing. Rapidly growing transportation network companies (TNCs), such as Uber and Lyft, however, are disrupting conventional taxi and limousine services and are raising policy challenges related to personal security and public safety, insurance requirements, employment and labor issues, and accessibility and equity. The committee's report offers guidance to state and local officials responsible for policy setting and regulation of for-hire transportation services in each of these areas. The report also addresses the need for greater consistency in regulations across jurisdictions and calls for TNCs to share more information about the volume, the frequency, and the types of trips they are providing, to allow for informed regulation and planning of transportation services"--provided by publisher.

Firmly established as the leading work on the law relating to all forms of gambling, Smith and Monckom: The Law of Gambling will provide you with everything you need to know about the law governing gambling in the UK. Previously titled The Law of Betting, Gaming and Lotteries, this new third edition has been completely updated to take account of the major new developments brought about by the Gambling Act 2005. In addition to this comprehensive treatment of the new Act the book includes coverage of: # Excise duties and betting levy # The National Lottery # The civil enforcement of gambling contracts and the law governing gambling syndicates # Advertising and gaming # Money laundering regulation in the gambling context # The interface between gambling licensing and planning About the editor: Stephen Philip Monckom BA (Oxon). Of the Middle Temple, Barrister A well-known, highly experienced and respected barrister, Stephen Monckom is a specialist in gambling and gaming work and practices extensively in these areas. This new edition has been prepared by him and a team of leading practitioners, barristers and solicitors who are all specialists in the areas to which they have contributed.

This Handbook grapples conceptually and practically with what the sharing economy - which includes entities ranging from large for-profit firms like Airbnb, Uber, Lyft, TaskRabbit, and Upwork to smaller, non-profit collaborative initiatives - means for law, and how law, in turn, is shaping critical aspects of the sharing economy. Featuring a diverse set of contributors from many academic disciplines and countries, the book compiles the most important, up-to-date research on the regulation of the sharing economy. The first part surveys the nature of the sharing economy, explores the central challenge of balancing innovation and regulatory concerns, and examines the institutions confronting these regulatory challenges, and the second part turns to a series of specific regulatory domains, including labor and employment law, consumer protection, tax, and civil rights. This groundbreaking work should be read by anyone interested in the

dynamic relationship between law and the sharing economy.
