If you've invested in a camera as sophisticated as the Canon EOS 7D II, you're looking for more than good pictures -- you demand outstanding photos. After all, the 7D II is the most advanced APS-C format camera that Canon has ever introduced. It boasts 20 megapixels of resolution, blazing-fast automatic focus, and cool features like full high-definition movie shooting. But your gateway to pixel proficiency is dragged down by the slim little book included in the box as a manual. You know everything you need to know is in there, somewhere, but you don't know where to start. In addition, the camera manual doesn't offer much information on photography or digital photography. Nor are you interested in spending hours or days studying a comprehensive book on digital SLR still photography that doesn't necessarily apply directly to your 7D II. What you need is a guide that explains the purpose and function of the 7D II's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, exposure, and special autofocus modes available, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred great pictures with your new camera. Why isn't there a book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? Now there is such a book. If you want a quick introduction to the 7D II's focus controls, wireless flash synchronization options, how to choose lenses, or which exposure modes are best, this book is for you. William Eggleston's Guide was the first one-man show of colour photographs ever presented at The Museum of Modern Art, New York, and the Museum's first publication of colour photography. The reception was divided and passionate. The book and show unabashedly forced the art world to deal with colour photography, a medium scarcely taken seriously at the time, and with the vernacular content of a body of photographs that could have been but definitely weren't some average person's Instamatic pictures from the family album. These photographs heralded a new mastery of the use of colour as an integral element of photographic composition. Bound in a textured cover inset with a photograph of a tricycle and stamped with yearbook-style gold lettering, the Guide contained 48 images edited down from 375 shot between 1969 and 1971 and displayed a deceptively casual, actually superrefined look at the surrounding world. Here are people, landscapes and odd little moments in and around Eggleston's home town of Memphis - an anonymous woman in a loudly patterned dress and cat's eye glasses sitting, left leg slightly raised, on an equally loud outdoor sofa; a coal-fired barbecue shooting up in flames, framed by a shiny silver tricycle; the curves of a gleaming black car fender, and someone's torso; a tiny, grey-haired lady in a faded, flowered housecoat, standing expectant, and

dwarfed in the huge dark doorway of a mint-green room whose only visible furniture is a shaded lamp on an end table.
