The rise of digital media has been widely regarded as transforming the nature of our social experience in the twenty-first century. The speed with which new forms of connectivity and communication are being incorporated into our everyday lives often gives us little time to stop and consider the social implications of those practices. Nonetheless, it is critically important that we do so, and this sociological introduction to the field of digital technologies is intended to enable a deeper understanding of their prominent role in everyday life. The fundamental theoretical and ethical debates on the sociology of the digital media are presented in accessible summaries, ranging from economy and technology to criminology and sexuality. Key theoretical paradigms are explored through a broad range of contemporary social phenomena - from social networking and virtual lives to the rise of cybercrime and identity theft, from the utopian ideals of virtual democracy to the Orwellian nightmare of the surveillance society, from the free software movement to the implications of online shopping. As an entry-level pathway for students in sociology, media, communications and cultural studies, the aim of this work is to situate the rise of digital media within the context of a complex and rapidly changing world.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

In the twenty-first century, it is necessary for Asia to step up and assume a larger leadership role on the global stage, commensurate with its economic weight and interests. Eighty-eight percent of the increase in the numbers of the middle class in the next five years will take place in Asia, underscoring the reality that global business and leadership will be colored in significant ways by Asian values, approaches and strategies. This book explores how this may impact our view and conceptual approach to the notion of global leadership. The contributors to this collection explore and examine the concept of global Asian leadership and outcome implications at the societal, corporate and policy-making level. They argue that global leaders will increasingly focus on specific needs, values and strategies that are uniquely Asian, which emphasizes the reality that we most likely will have to redefine our notion of global leadership. This comprehensive study of the integration of Asian and global leadership will benefit those employed in the corporate, government and educational sectors as well as a broader audience with an interest in leadership, policy-making and economics.

In Global Communications, International Affairs and the Media since 1945 , Philip M. Taylor traces the increased involvement of the media in issues of peace and especially war from the nineteenth century to the present day. He analyzes the nature, role and impact of communications within the international arena since 1945 and how communications interacts with foreign policy in practice rather than in theory. Using studies which include the Gul War and Vietnam, Taylor details the contemporary problems reporting while at the same time providing a comprehensive historical context.

The conference "Media Education Futures" in Tampere, Finland 2014, highlighted participation, well-being and citizenship as current Nordic perspectives in media education, and discussed media and information literacies contributing to intercultural dialogue. The goal was to explore the field along with the practices of media education. Research results presented at the conference indicated that the civic skills needed in information societies include critical awareness, which is the basis for understanding media societies. Critical thinking is also the basis for understanding the teaching of coding, which has been done in several countries in new school curricula at the basic level. Moreover, broader cooperation among researchers with different cultural backgrounds, rather than traditional Europe-centred collaboration was echoed. This publication reports on the awareness, technological citizenry, methodologies in studying young people in urban cities, and youth well-being in relations to media and information literacies. The publication covers articles from different parts of the world including, for example, China and India in Asia and Brazil in South America as several European countries. It is divided into two sections - 1) Academic Articles and 2) Practical Papers and Case Studies - as reflections on the futures of media education.

Despite its key role in the intellectual shaping of state socialism, Communist ideas are often dismissed as mere propaganda or as a rhetorical exercise aimed at advancing socialist intellectuals on their way to power. By drawing attention to unknown and unexplored areas, trends and ways of thinking under socialism, the volume examines Eastern Europe and Russian histories of intellectual movements inspired - negatively as well as positively - by Communist arguments and dogmas. Through an interdisciplinary dialogue, the collection demonstrates how various bodies of theoretical knowledge (philosophical, social, political, aesthetic, even theological) were used not only to justify dominant political views, but also to frame oppositional and nonofficial discourses and practices. The examination of the underlying structures of Communism as an intellectual project provides convincing evidence for questioning a dominant approach that routinely frames the post-Communist intellectual development as a 'revival' or, at least, as a 'return' of the repressed intellectual traditions. As the book shows, the logic of a radical break, suggested by this approach, is in contradiction with historical evidence: a significant number of philosophical, theoretical and ideological debates in post-Communist world are in fact the logical continuation of intellectual conversations and confrontations initiated long before 1989. As the cultural and ideological foundations of imperial Russia were threatened by forces of modernity, an array of Orthodox churchmen, theologians, and lay thinkers turned to asceticism, hoping to ensure the coming Kingdom of God promised to the Russian nation.
