The technical resources, budgets, curriculum, and profile of the student body are all factors that play in implementing course design.

Learning management systems administrate these aspects for the development of new methods for course delivery and corresponding instructional design. Learning Management Systems and Instructional Design: Best Practices in Online Education provides an overview on the connection between learning management systems and the variety of instructional design models and methods of course delivery. This book is a useful source for administrators, faculty, instructional designers, course developers, and businesses interested in the technological solutions and methods of online education.

This book is written for all university and college teachers interested in experimenting with discussion methods in their classrooms.

Discussion as a Way of Teaching is a book full of ideas, techniques, and usable suggestions on: *

- * How to prepare students and teachers to participate in discussion**
- * How to get discussions started**
- * How to keep discussions going**
- * How to ensure that teachers' and students' voices are kept in some sort of balance**

It considers the influence of factors of race, class and gender on discussion groups and argues that teachers need to intervene to prevent patterns of inequity present in the wider society automatically reproducing themselves inside the discussion-based classroom. It also grounds the evaluation of discussions in the multiple subjectivities of

students' perceptions. An invaluable and helpful resource for university and college teachers who use, or are thinking of using, discussion approaches.

Discussion as a Way of Teaching

"This book is an authoritative reference source for the latest scholarly research on learner-focused approaches within adult education environments, featuring expansive coverage on topics relating to open education, lifelong learning, and formal qualifications"--

Employ cognitive theory in the classroom every day
Research into how we learn has opened the door for utilizing cognitive theory to facilitate better student learning. But that's easier said than done. Many books about cognitive theory introduce radical but impractical theories, failing to make the connection to the classroom. In *Small Teaching*, James Lang presents a strategy for improving student learning with a series of modest but powerful changes that make a big difference—many of which can be put into practice in a single class period. These strategies are designed to bridge the chasm between primary research and the classroom environment in a way that can be implemented by any faculty in any discipline, and even integrated into pre-existing teaching techniques. Learn, for example: How does one become good at retrieving knowledge from memory? How does making predictions now help us

learn in the future? How do instructors instill fixed or growth mindsets in their students? Each chapter introduces a basic concept in cognitive theory, explains when and how it should be employed, and provides firm examples of how the intervention has been or could be used in a variety of disciplines. Small teaching techniques include brief classroom or online learning activities, one-time interventions, and small modifications in course design or communication with students.

Online instruction is rapidly expanding the way professors think about and plan instruction. In addition, online instructional practices are expanding and changing as new tools and strategies are adopted. It is imperative that programs and institutions of higher education explore increased online options that align with best practices to develop effective and engaging online courses. The Handbook of Research on Developing Engaging Online Courses is an essential research publication that provides multiple perspectives on improving student engagement and success in online courses. This book includes topics focused on the online learner, online course content, and effective online instruction. The content contained within the title is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students.

Student satisfaction and course engagement levels increase with the use of instructor-generated videos - the subject of this book. Beginning by outlining the different types of videos you can create, and what the research says about their effectiveness, Karen Costa

explains how they can be designed to reinforce learning, to align with and promote course outcomes, and to save you time across your courses. She then describes how to create successful videos with commonly available technologies such as your smartphone, and without a major investment of time, demonstrating the simple steps she took to develop her bank of videos and build her confidence to deliver short, straightforward learning aids that are effective and personal. If you've been wanting to include videos in your teaching but haven't found the time or confidence, this book will help you to develop a simple and sustainable video development process, supporting both your success and the success of your students.

This book recognizes the associated opportunities and challenges for teachers, and provides the rationale, strategies and tools to design blended learning courses or to guide the transition from fully face-to-face or fully online courses to blended instruction. The authors propose a framework based on four phases, Design, Build, Teach and Evaluate, which facilitates a systematic approach to course development. The volume simplifies the connection between theory and practice, by including examples that readers can relate to and immediately implement as they build or teach a course. Including case studies of

successful implementations, and effective instructional strategies and techniques, this book is accessible even for teachers without previous experience in course design, whilst also acting as a reference for more experienced language educators.

As learning options have evolved, educators must adopt a variety of pedagogical strategies and innovative technologies to enable learning. Practical Applications and Experiences in K-20 Blended Learning Environments compiles pedagogical strategies and technologies and their outcomes that have been successfully applied in blended instruction. Highlighting best practices as elementary, secondary, and tertiary educational levels; this book is a vital tool for educators who teach or plan to teach in blended learning environments and for researchers interested in the area of blended education knowledge.

Linda Nilson puts forward an innovative but practical and tested approach to grading--the specifications grading paradigm--which restructures assessments to streamline the grading process and greatly reduce grading time, empower students to choose the level of attainment they want to achieve, reduce antagonism between the evaluator and the evaluated, and increase student receptivity to meaningful feedback, thus facilitating the learning process - all while upholding rigor. In addition, specs grading increases students' motivation to do well by making expectations clear, lowering their stress and giving them agency in determining their course goals.

Among the unique characteristics of the schema, all of which simplify faculty decision making, are the elimination of partial credit, the reliance on a one-level grading rubric and the "bundling" of assignments and tests around learning outcomes. Successfully completing more challenging bundles (or modules) earns a student a higher course grade. Specs grading works equally well in small and large class settings and encourages "authentic assessment." Used consistently over time, it can restore credibility to grades by demonstrating and making transparent to all stakeholders the learning outcomes that students achieve.

Following Karl Kapp's earlier book *The Gamification of Learning and Instruction*, this Fieldbook provides a step-by-step approach to implementing the concepts from the *Gamification* book with examples, tips, tricks, and worksheets to help a learning professional or faculty member put the ideas into practice. The *Online Workbook*, designed largely for students using the original book as a textbook, includes quizzes, worksheets and fill-in-the-blank areas that will help a student to better understand the ideas, concepts and elements of incorporating gamification into learning.

“Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved, equity-focused grading for impact.” --Zaretta Hammond, Author of Culturally Responsive Teaching & The Brain Crack open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today’s schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With *Grading for Equity*, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, *Grading for Equity* provides A

critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a “fixed mindset” about students’ academic potential—practices that are still in place a century later A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a “true north” orientation toward equitable grading practices Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness Reflection tools for facilitating individual or group engagement and understanding As Joe writes, “Grading practices are a mirror not just for students, but for us as their teachers.” Each one of us should start by asking, “What do my grading practices say about who I am and what I believe?” Then, let’s make the choice to do things differently . . . with Grading for Equity as a dog-eared reference.
