"[This book is] the most authoritative assessment of the advantages and disadvantages of recent trends toward the commercialization of health care," says Robert Pear of The New York Times. This major study by the Institute of Medicine examines virtually all aspects of for-profit health care in the United States, including the quality and availability of health care, the cost of medical care, access to financial capital, implications for education and research, and the fiduciary role of the physician. In addition to the report, the book contains 15 papers by experts in the field of for-profit health care covering a broad range of topics--from trends in the growth of major investor-owned hospital companies to the ethical issues in for-profit health care. "The report makes a lasting contribution to the health policy literature."--Journal of Health Politics, Policy and Law.

Real estate activity across national boundaries (investment, development and asset management) is firmly established as a major component of global economic activity. International Real Estate provides the understanding of real estate strategies and transactions that cross national boundaries. International organizations lament the narrow perspective of professionals in the real estate field, which stems from training that takes a parochial rather than international view of the practices and processes of real estate markets. This book takes an explicitly international perspective to the decision-making process leading to final 'accept' or 'reject' investment decisions. It will be the first to adopt an institutional

approach that directly addresses the problems of how to identify and avoid the main pitfalls of cross-border investment in real estate. The key to understanding international real estate comes from understanding the impact on investment and management decisions of differences in the formal and informal 'rules of the game'. The authors define the key feature of international real estate as the institutions that frame, facilitate or impede investment in land and buildings across national boundaries.

The reader is encouraged to actively engage with the website alongside this text. This book challenges the prevailing metro-centric view of globalization. Rather than privileging the experiences of cities and urban regions in the industrialized world, it argues that cities in

the so-called "developing" world present opportunities for scholars to re-think entrenched ideas of globalization, urban development and political community. Kalyan presents a trans-disciplinary exploration of the manifold possibilities and challenges that confront a "globalizing" megacity like New Delhi. Combining theoretical scholarship, ethnographic exploration, media archival research and textual and visual analysis, the book foregrounds complex urban dynamics in and around the region and raises critical questions about changing urban life for postcolonial cities across the Global South. Kalyan employs methodological approaches from political economy, urban studies and visual culture to render a vivid portrait of changing urban life in India's largest conurbation. The book will be of interest to students and scholars of urban studies, postcolonial studies and inter-disciplinary studies.

American workers rely on their employers to provide a way to generate retirement income beyond their Social Security earnings. Many employers still offer traditional defined benefit (DB) pension plans. A growing majority, however, have replaced DB plans with account-based defined contribution (DC) plans. Virtually everyone acknowledges that the basic DC plan design is flawed. Yet as a society with low private savings and a fraying Social Security system, we count on this imperfect structure to serve as a retirement security bulwark. Workers and society both need the employer-sponsored retirement system to function well. Enhancing DC plan design therefore becomes critical. Defined Contribution Plans: Challenges and Opportunities for Plan Sponsors offers guidance to plan sponsors interested in better understanding the primary issues confronting DC plans. We wrote this book from the viewpoint of the plan sponsor seeking to improve the DC system, and it follows five major themes: the plan participant, the plan sponsor, plan design, investments and investment managers, and asset decumulation in retirement. We present the material conversationally from a high-level perspective. We have not sought to write an encyclopedia on DC plans but rather focus on the basic features of well-run plans. We

address key challenges facing DC plans and offer associated design and policy recommendations for plan sponsors and other interested parties to consider. Plan design improvements almost certainly will be incremental, rather than sweeping top-down changes mandated by regulators. Plan sponsors individually will make the important decisions that have lasting consequences for participants and for society. Our objective is to spark interest among sponsors, encouraging them to carry out additional research and take action. We believe the DC system will be strengthened by informed sponsors advocating for and implementing thoughtful strategic changes to their plans.

Financial science, both quantitative and behavioral, can be used to improve the retirement planning effort. Despite a vast amount of literature on the topic, Secure Retirement recognizes the need to validate this knowledge and develop a comprehensive framework for investors.

FEMA's Hazard Mitigation Grant Program is a powerful resource in the combined effort by Federal, State, and local government, as well as private industry and homeowners, to end the cycle of repetitive disaster damage. The Robert T. Stafford Disaster Relief and Emergency Assistance Act was passed on November 23, 1988, amending Public Law 93-288, the Disaster Relief Act of 1974. The Stafford Act included Section 404, which established the Hazard

Access Free Capital Accumulation Plan Guidelines

Mitigation Grant Program. In 1993, the Hazard Mitigation and Relocation Act amended Section 404 to increase the amount of HMGP funds available and the cost-share to 75 percent Federal. This amendment also encouraged the use of property acquisition and other non-structural flood mitigation measures. In an effort to streamline HMGP delivery, FEMA encourages States to develop their mitigation programs before disaster strikes. States are adopting a more active HMGP management role. Increased capabilities may include: Conducting comprehensive all-hazard mitigation planning prior to disaster events; Providing applicants technical assistance on sound mitigation techniques and hazard mitigation policy and procedures; Coordinating mitigation programs through interagency teams or councils. Conducting benefit-cost analyses; and Preparing National Environmental Policy Act reviews for FEMA approval. States that integrate the HMGP with their frequently updated State Administrative and Hazard Mitigation Plans will create cohesive and effective approaches to loss reduction. This type of coordinated approach minimizes the distinction between “predisaster” and “post-disaster” time periods, and instead produces an ongoing mitigation effort. Hazard mitigation is any sustained action taken to reduce or eliminate long-term risk to people and property from natural hazards and their effects.

A key purpose of the HMGP is to ensure that the opportunity to take critical mitigation measures to protect life and property from future disasters is not lost during the recovery and reconstruction process following a disaster. Program grant funds available under Section 404 of the Stafford Act provide States with the incentive and capability to implement mitigation measures that previously may have been infeasible. The purpose of this Desk Reference is to: Provide comprehensive information about FEMA's Hazard Mitigation Grant Program (HMGP); Increase awareness of the HMGP as an integral part of statewide hazard mitigation efforts; and Encourage deeper commitments and increased responsibilities on the part of all States and communities to reduce damage and losses from natural disasters. This Desk Reference is organized to simplify program information and assist the reader with practical guidance for successful participation in the program. Lists of program-related acronyms and definitions are included, along with appendices that amplify selected aspects of the HMGP. This Desk Reference is organized into 14 sections, each of which presents a major HMGP subject area. In each section, information is presented on the right side of the page. In several sections, job aids containing supplemental material are provided. The job aids for each section can be found at the end of the section. At the front of each section,

Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based

Access Free Capital Accumulation Plan Guidelines

interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD.

This study aims to identify and describe the principle economic issues associated with individual and population ageing. In addition, the study surveys and assesses the existing knowledge - including research by scholars of many countries and different fields in the social sciences - of the economic and social problems associated with ageing. Although the study covers a wide range of issues, it focuses primarily on the economic complexities of individual ageing and the macro-economic problems that arise from age-structure changes in the population. The authors, giving examples from many countries, trace the development of concern for population ageing and examine theoretical concepts and changing demographic conditions. Cross-national econometric studies are cited along with time series and cross-sectional research on individual countries. In assessing the state of the literature on the economic problems of ageing, the authors have attempted to indicate fruitful avenues for further research.

This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

rapidly eroding, as companies alter, amend, and terminate their conventional plans in the face of poor investment performance and new methods of pension accounting. Experts from the UK, the US, Japan, Sweden, and Canada offer international perspectives on the evolving institutions of retirement practice. This book provides readers a range of insights and strategies not available in other volumes, and it represents an invaluable addition to the PRC/OUP series. It will be particularly valuable for managers working toward more efficient pension plans; to scholars and policymakers seeking to maximize pension design and effectiveness; and to actuaries and tax specialists concerned with pension regulation.
