from successful jurisdictions. Approach and recommendations consistent with the National Advisory Council on State and Local Government Budgeting, emphasizing goal setting and planning. Tips on prioritizing projects, winning political support for projects, and selling debt successfully. A book for every manager's bookshelf.

Financial management refers to the efficient and effective management of money (funds) in such a manner as to accomplish the objectives of the organization. It is the specialized function directly associated with the top management. The significance of this function is not only seen in the 'Line' but also in the capacity of 'Staff' in overall administration of a company. It has been defined differently by different experts in

the field. It includes how to raise the capital, how to allocate it i.e. capital budgeting. Not only about long term budgeting but also how to allocate the short term resources like current assets. It also deals with the dividend policies of the share holders. DEFINITION of 'Strategic Financial Management '

Managing an organization's financial resources so as to achieve its business objectives and maximize its value.

Strategic financial management involves a defined sequence of steps that encompasses the full range of a company's finances, from setting out objectives and identifying resources, analyzing data and making financial decisions, to tracking the variance between actual and budgeted results and identifying the reasons for this variance.

supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

Capital budgeting is a planning process that determines the worth of long-term investments from a firm's capitalization structure.

Some investments that an organization makes can include new and old machinery installation and maintenance, new products and services, new research and development projects, etc. The primary objective of capital budgeting and investment analysis is to enhance the capital benefit and value for shareholders. Some of the methods used in capital budgeting include accounting rate of return, payback period, profitability index, etc. An

Seminar paper from the year 2005 in the subject Business

Read Book Capital Budgeting And Long Term Financing Decisions

economics - General, grade: 1.3, California State University, Fullerton, course: Theory of Corporate Finance, 21 entries in the bibliography, language: English, abstract: This paper will deal with the procedure and implementations of firm/stock valuation using FCF approach and WACC - the weighted average cost of capital. On the road, the different approaches and methods of firm valuation, the various inputs of WACC and the final procedure finding the fair market value of the firm using Pro Forma Financial Statements, will be discussed. In this valuation method the two main parts contributing to the final value of the firm are Free Cash Flows (FCF) and the weighted average

Read Book Capital Budgeting And Long Term Financing Decisions

cost of capital. It is then used the time value of money concept along with some educated guesses about the long term sales growth rate and the long term WACC to apply common capital budgeting rules of project evaluation. Besides that, the paper will shortly discuss the influence of capital structure on a firm's value. It will come out that there is a difference in value whether the company is leveraged and uses debt or not. When it comes to the different inputs of the WACC, a main focus will be on the required rate of return for shareholders. Finding the 'right' beta and an appropriate estimate for the market risk premium are the main issues of that part.

Read Book Capital Budgeting And Long Term Financing Decisions

Therefore, the CAPM model and its specific determinants will be analyzed. Thereafter, the nature of pro forma financial statements and the different parts of them will be defined. It will be described how the 'free cash flows' are determined and how that leads to the actual valuation procedure. Finally, the paper will focus on the terminal value as probably the most important and affecting part of the calculated firm value and its nature as a perpetuity in an investing perspective. The conclusion will finally deal with a critical assessment of the firm valuation process with the FCF method.

A Guide for Local Governments
Report to the Congress

We characterize the optimal dynamic mechanism for capital budgeting and managerial compensation. The division manager privately observes the project productivity at each point in time as well as an initial signal that governs the productivity evolution. We show that the optimal allocation can be implemented by a simple mechanism with a one-time report of the initial signal. In the simple mechanism, the headquarters delegates the investment decisions to the manager and finances the capital

Read Book Capital Budgeting And Long Term Financing Decisions

expenditure by tying the budget to a linear compensation scheme. The project growth and the power of incentives depend on how the initial signal affects the future types.

Inhaltsangabe:Abstract: Every investment, for example new facilities, new products, or strategic partnerships is driven by the pursuit of creating values . Major changes are going on in the valuation of investments. Although the classic shareholder value concept is still a valuable source for identification of value drivers of strategic management, it needs to be extended in terms of its ability to evaluate long-term investment choices. Far too

Read Book Capital Budgeting And Long Term Financing Decisions

long capital budgeting has only been considered under aspects of its contribution to an overall added economic value rather than focusing on a firm s resources. Recent research emphasized the strategic value of resources leading to formulate the approach of a resource-based view of a firm s activities. Usually management tries to capture future development with static methods of capital budgeting, i.e. future cash-flows are discounted with a fixed risk-adjusted discount rate. However, the finding of present values and capitalized values could produce pitfalls in investment decisions. Strategic investment decisions

Read Book Capital Budgeting And Long Term Financing Decisions

are often characterized by a wide range of possibilities to react flexibly to the changing business environment. This area of tolerance in investment decisions could not be captured with traditional instruments of investment evaluation. In the 1970s, the discounted-cash-flow analysis (DCF) emerged and proved its practicability. This method assumes a now or never approach in undertaking a project. Some authors suggest adding the theory of option prices to investment decisions, as in the 1970s and the 1980s developments in the valuation of capital-investment opportunities based on option pricing

Read Book Capital Budgeting And Long Term Financing Decisions

revolutionized capital budgeting. Option pricing allows adaptation and revision of future decisions in order to capture managerial flexibility and to finally capitalize on any possible future development. To incorporate these real options means to limit losses and offers a vital contribution to long-term corporate success, especially in those marketplaces characterized by uncertainty and rapid change. This method also explains the value of waiting for the initial project and considers its value in comparison to the opportunity costs of waiting. These costs are dictated by the behavior of competitors and loss

The main focus of this study is the analysis of the capital budgeting practices and techniques implemented by companies listed on the Alternative Exchange (Alt X) of the Johannesburg Securities Exchange (JSE). Dayananda, Iron, Harrison, Herbohn and Rowland (2002) explain that capital budgeting is the process through which companies assess various sizeable investments, both tangible and intangible, to determine the most viable investment projects for the company. Dayananda et al. (2002) further explain that viable investment projects are ventures that correspond with the company's objective of maximising shareholder wealth. Therefore, the capital budgeting process used by a company is very

Read Book Capital Budgeting And Long Term Financing Decisions

influential to its long-term sustainability. Ryan and Ryan (2002) add that an effective capital budgeting process employs appropriate measures and accurate techniques that ensure the company invests only in the most lucrative proposed projects. This study commences by presenting a general introduction into the research conducted, offering background insight that explains the need for a study of this nature. The research problem that was identified is discussed, followed by the purpose statement of the study and a definition of all the research objectives that guide the study. Furthermore, the academic value and intended contribution of the study as well as its practical benefits are disclosed. The introductory chapter also consists of the delimitations of

Read Book Capital Budgeting And Long Term Financing Decisions

the study and the key concepts covered in this study. In order to provide a complete analysis of the capital budgeting practices employed by the companies listed on the Alt X, a comprehensive literature review was conducted. This highlighted the importance of capital budgeting as well as the capital budgeting behaviour of large firms in South Africa and internationally. What emerged from this research was that the capital budgeting practices and techniques implemented by large companies generally tend to align with the recommendations of financial theory which advocates the use of discounted cash flow techniques and a discount rate that accounts for all sources of funds available to the company. The literature review also assesses studies conducted on the

Read Book Capital Budgeting And Long Term Financing Decisions

capital budgeting practices of small and medium sized enterprises (SMEs), the category under which Alt X listed companies fall. Findings from those studies reveal that SMEs traditionally employ inferior capital budgeting techniques in comparison to their - iii - larger counterparts and use no formal procedures to calculate an acceptable rate of return required from proposed investment projects. The theoretical background gained from the literature review is complimented by an empirical analysis which investigates the actual capital budgeting behaviour of the SMEs listed on the Alt X. Companies included in the study were from all seven sectors represented on the Alt X and selection was limited only to those with an active primary listing on this board. A web-based survey

Read Book Capital Budgeting And Long Term Financing Decisions

comprising of 28 questions was formulated using Survey Monkey Software to collect and analyse responses. The survey was divided into sections which included questions about respondent demographics, company profiles, capital budgeting practices implemented, capital rationing and the use of discount rates. The survey remained active for a period of eight weeks to allow sufficient time for all respondents invited to participate. A total of 15 responses were obtained from this process when the survey was closed to further responses. The research design, methodology and techniques that guided this study are also disclosed in this dissertation. The final part of this dissertation contains research findings obtained from analysing the primary data gathered

Read Book Capital Budgeting And Long Term Financing Decisions

through the survey. These findings are analysed and interpreted in isolation, by relating them to findings from comparable studies of the same population as well as to similar studies conducted both locally and internationally. Finally, this dissertation concludes by summarising all research findings derived from the literature review and the empirical study. It also presents recommendations and areas for further study that could be of academic and practical value to the field of finance.

A Collection of Haphazard Practices : Report to the Congress

Traditionally, the study of financial decision making in law enforcement and criminal justice entities has been approached from the perspective of tax revenues and budgeting that focus only on the past and present. Capital investments of cash flow provide future benefits to all organizations, and among courses in business administration, these notions of long-term financial management are critical to a sound understanding of organizational finance. Strategic Finance for Criminal Justice Organizations examines capital budgeting techniques from a quantitative perspective that targets the strategic future of revenues within the criminal justice and law enforcement sectors. Explaining capital budgeting concepts through the use of practical examples, this volume discusses:

render beneficial, long-term strategic decisions within the law enforcement and criminal justice environment.

Capital budgeting is an important part of the financial management of a business organization. It is a process that business houses use to evaluate an investment project. The decision of whether to accept or deny an investment project is capital budgeting decision. Capital budgeting is important because it determines the long-term economic and financial profitability of any investment project. It lays down the future success of a business. Capital Budgeting aims to develop not only an understanding of the concepts of capital budgeting but also to provide its practical application to help students learn both theory and practice of capital budgeting used in the financial management of a business organization. It analyzes the capital budgeting practices of corporate
