CEF Levels: A1, A2 and B1. Career Paths English: Information Technology is a new educational resource for technology professionals who want to improve their English communication skills in a work environment. Incorporating career-specific vocabulary and contexts, each unit offers step-by-step instruction that immerses students in the four key language components: reading, listening, speaking, and writing. Career Paths English: Information Technology addresses topics including computer components, accessories, software, Internet security, web design and the future of the industry. The series is organized into three levels of difficulty and offers over 400 vocabulary terms and phrases. Every unit includes a test of reading comprehension, vocabulary, and listening skills, and leads students through written and oral production. Included Features: A variety of realistic reading passages; Career-specific dialogues; 45 reading and listening comprehension checks; Over 400 vocabulary terms and phrases; Guided speaking and writing exercises; Complete glossary of terms and phrases. The Teacher's book contains full answer key and audio scripts. The audio CDs contain all recorded material in British English.

English for Psychology in Higher Education Studies The Garnet Education English for Specific Academic Purposes series won the Duke of Edinburgh English Speaking Union English Language Book Award in 2009. English for Psychology is a skills-based course designed specifically for students of psychology who are about to enter English-medium tertiary level studies. It provides carefully graded practice and progression in the key academic skills that all students need, such as listening to lectures and speaking in seminars. It also equips students with the specialist language they need to participate successfully within a psychology faculty. Extensive listening exercises come from psychology lectures, and all reading texts are taken from the same field of study. There is also a focus throughout on the key psychology vocabulary that students will need. The Teacher's Book includes: Comprehensive teaching notes on all exercises to help teachers prepare effective lessons Complete answer keys to all exercises Full transcripts of listening exercises Facsimiles of Course Book pages at the appropriate point in each unit Photocopiable resource pages and ideas for additional activities The Garnet English for Specific Academic Purposes series covers a range of academic subjects. All titles present the same skills and vocabulary points. Teachers can therefore deal with a range of ESAP courses at the same time, knowing that each subject title will focus on the same key skills and follow the same structure. Key Features Systematic approach to developing academic skills through relevant content. Focus on receptive skills (reading and listening) to activate productive skills (writing and speaking) in subject area. Eight-page units combine language and academic skills teaching. Vocabulary and academic skills bank in each unit for reference and revision. Audio CDs for further self-study or homework. Ideal coursework for EAP teachers.

English for Geodetic Engineering is specially designed for Geodetic Engineering Study Program students of Banjarmasin State Polytechnic. The materials compiled are from various sources including the internet to give update and real-life use of English in the related field. In attempt of boosting students’ general as well as specific knowledge, the book discusses specific issues on geodetic engineering as well as general knowledge considered needed for the target students regarding numbers, shapes and angles and safety. This book consists of six chapters namely “Talking about Numbers”, “Using the Numbers”, “Describing Shapes and Angles”, “Identifying Sign and Symbols”, “Using Safety Precautions” and “Reading Texts about Geodetic Engineering”. Those chapters deal with general knowledge to equip the students’ knowledge and specific vocabularies that they need in carrying out their jobs. Each chapter consists of theories, examples and exercises to hone the students four skills in English namely listening, speaking, reading and writing and it is expected that the lessons will help them in understanding geodetic engineering world in specific and work world in general and assist them in their career in the near future.

For the first time an award-winning Harvard professor shares the lessons from his wildly popular course on classical Chinese philosophy, showing you how these ancient ideas can guide you on the path to a good life today. The lessons taught by ancient Chinese philosophers surprisingly still apply, and they challenge our fundamental assumptions about how to lead a fulfilled, happy, and successful life. Self-discovery, it turns out, comes through looking outward, not inward. Power comes from holding back. Good relationships come from small gestures. Spontaneity comes from practice. And excellence comes from what you choose to do, not your “natural” abilities. Counterintuitive. Countercultural. Even revolutionary. These powerful ideas have made Professor Michael Puett’s course the third most popular at Harvard University in recent years, with enrollment surging every year since it was first offered in 2006. It’s clear students are drawn by a bold promise Professor Puett makes on the first day of class: “These ideas will change your life.” Now he offers his course to the world.

Management II.

Specifically designed as an introduction to the exciting world of engineering, ENGINEERING FUNDAMENTALS: AN INTRODUCTION TO ENGINEERING encourages students to become engineers and prepares them with a solid foundation in the fundamental principles and physical laws. The book begins with a discovery of what engineers do as well as an inside look into the various areas of specialization. An explanation on good study habits and what it takes to succeed is included as well as an introduction to design and problem solving, communication, and ethics. Once this foundation is established, the book moves on to the basic physical concepts and laws that students will encounter regularly. The framework of this text teaches students that engineers apply physical and chemical laws and principles as well as mathematics to design, test, and supervise the production of millions of parts, products, and services that people use every day. By gaining problem solving skills and an understanding of fundamental principles, students are on their way to becoming analytical, detail-oriented, and creative engineers.
