This thorough volume delves into antiepileptic drug discovery with a comprehensive collection of innovative approaches for the development of antiepileptic therapies, focusing on novel molecular targets for antiepileptic drugs, computer-aided approaches for the identification of new drug candidates, and therapeutic strategies to overcome refractory epilepsy. The last section illustrates the potential benefits that network pharmacology and rational drug repurposing could bring to the antiepileptic drug discovery community. Written for the Methods in Pharmacology and Toxicology series, chapters include the kind of detailed description and implementation advice to ensure results in the laboratory. Authoritative and practical, Antiepileptic Drug Discovery: Novel Approaches aims to provide medicinal chemists, pharmacologists, and other researchers with the tools need to further explore the study of pharmaco-resistant epilepsy and the discovery of new antiepileptic drugs.

Vol. for 1900 accompanied by "Festheft dem VIII. Internationalen Geologen Congress zu Paris gewidmet"; for 1907 accompanied by "Festband zur Feier des 100 j ä hrigen Bestehens" (QE 1 .N495 1907).

This book provides an overview of beach management tools, including carrying capacity, beach nourishment, environmental and tourism awards (like Blue Flag or others), bathing water quality, zoning, beach typologies, quality index, user's perception, interdisciplinary beach monitoring, coastal legislation, shore protection, social and economic indicators, ecosystem services, and coastal governance (applied in beach case studies). Beaches are one of the most intensely used coastal ecosystems and are responsible for more than half of all global tourism revenues, and as such the book introduces a wide range of state-of-the-art tools that can be used to deal with a variety of beach challenges. Each chapter features specific types of tools that can be applied to advantage in beach management practices. With examples of local and regional case studies from around the globe, this is a valuable resource for anyone involved in beach management.

Prion diseases, or transmissible spongiform encephalopathies (TSEs), are a group of fatal and transmissible neurodegenerative disorders characterized by long incubation periods, misfolded prion protein (PrP) deposition, and usually spongiform vacuolation. These devastating diseases affect many mammals, with the best known examples being Creutzfeldt-Jakob disease (CJD), fatal familial insomnia (FFI), or Kuru in humans; and scrapie in sheep, bovine spongiform encephalopathy (BSE) in cattle, and chronic wasting disease (CWD) in cervids. Despite major achievements in research of TSEs, there are still many unresolved key issues that hamper the development of effective therapies. However, the last decade has been particularly prolific in advances in the prion field. Among others, prion propagation in vitro has been achieved, leading to new diagnostic methods; the basic architecture of infectious prions has been deciphered; new prion disease types have been described in humans and other animals; and prion disorders have emerged in places that had not previously reported the disorders, as is the case for CWD in Europe. This Special Issue will focus on the state of the art of our knowledge of PrPSc: on what we know about its structure and propagation, the basis of strains and transmission barriers, the mechanisms of PrPSc toxicity, the possible function of PrPSc's properly folded precursor, PrPC and its evolutionary history, and recent technical breakthroughs in diagnostics and therapy development among other key aspects of PrPSc prion biology.

Il Piemonte cispadano antico, ovvero Memorie per servire alla notizia del medesimo, e all'intelligenza degli antichi scrittori, diplomi, e documenti, che lo concernono, con varie discussioni di storia, e di critica diplomatica, e con monumenti non più divulgati. Di Jacopo Durandi

*The Soils of Italy is the first comprehensive book on Italian pedology in seventy years. Taking advantage of the authors' large experience and of the most up-to-date information and technology, this book treats the main soil types of Italy, their diffusion, their functions, ecological use, and the threats to which they are subjected during centuries of intensive management. It also deals with future scenarios of the relationships between soil science and other disciplines, such as urban development, medicine, economics, sociology, and archaeology. The description of the soils is accompanied by a complete set of data, pictures and maps, including benchmark profiles. Factors of soil formation are also treated, making use of new, unpublished data and elaborations. The book also includes a history of pedological research in Italy, spanning over a century.*

*Geomorphological Mapping: a professional handbook of techniques and applications is a new book targeted at academics and practitioners who use, or wish to utilise, geomorphological mapping within their work. Synthesising for the first time an historical perspective to geomorphological mapping, field based and digital tools and techniques for mapping and an extensive array of case studies from academics and professionals active in the area. Those active in geomorphology, engineering geology, reinsurance, Environmental Impact Assessors, and allied areas, will find the text of immense value. Growth of interest in geomorphological mapping and currently no texts comprehensively cover this topic Extensive case studies that will appeal to professionals, academics and students (with extensive use of diagrams, potentially colour plates) Brings together material on digital mapping (GIS and remote sensing), cartography and data sources with a focus on modern technologies (including GIS, remote sensing and digital terrain analysis) Provides readers with summaries of current advances in methodological/technical aspects Accompanied by electronic resources for digital mapping*

« Archeologia Medievale » pubblica contributi originali riguardanti l'archeologia postclassica, la storia della cultura materiale in età pre-industriale e le scienze applicate nella forma di saggi e studi originali; relazioni preliminari di scavo; contributi critici su libri, articoli, ritrovamenti, ecc. Vengono pubblicati sia testi in italiano che in altre lingue. Nella sezione Saggi di questo numero sono presenti contributi sull'evoluzione delle ville romane nel tardo-antico, sulla ricognizioni topografiche ed archeologiche nella Campagna Romana e sul metodo di interpretazione dei resti materiali della produzione di campane.

Europe has a long history of managing coastal erosion and protection, examples including the defences of the Venice lagoons, Mediterranean beaches and reclaimed land in The Netherlands. Climate change is now creating enhanced risks of coastal erosion through storms and rising sea levels, with many initiatives being developed to improve coastal protection. This book provides a comprehensive review of the entire coastline of Europe, from Scandinavia and the Baltic to the British Isles and north-west Europe, the Iberian Peninsula, Mediterranean...
