The first comprehensive psychiatry review textbook, designed expressly for the Canadian market, Psychiatry Review and Canadian Certification Exam Preparation Guide is the resource residents and psychiatrists need to master the qualifying examinations in psychiatry of the Royal College of Physicians and Surgeons of Canada. These exams are required for certification both for graduating residents and most foreign-trained psychiatrists seeking to practice in Canada. This new volume, based on The American Psychiatric Publishing Board Review Guide for Psychiatry, has been carefully edited to include only material relevant to the Canadian exam. References have been taken from both the U.S. and Canadian psychiatric literature, and laboratory units, medication names and doses, and the language used have been edited to be consistent with Canadian psychiatry. The volume takes the reader from the basic sciences comprising the foundation of psychiatry, through the psychiatric interview and other diagnostic topics, to syndrome-specific chapters paralleling DSM-IV-TR, and finally to current treatment options. Rounding out the review is a 200-question practice exam that reflects the structure of the actual board examinations. Although no substitute for quality medical and residency training, Psychiatry Review and Canadian Certification Exam Preparation Guide will help the prospective exam-taker ameliorate weaknesses and enhance strengths in preparation for a successful exam experience.

These flexible assessments can be used both in correlation with the Primary Sources kits or as stand-alone practice pieces for a variety of standardized tests. The Teacher's Edition includes a lesson to help teach students how to write Document-Based Question essays. Each Student Edition (sold separately in packs of 30 and in Add-On packs of 10) contains an assessment with the following types of questions: multiple choice, constructed-response, and documents leading to a DBQ (Document-Based Question) task.

Practicing College Learning Strategies presents practical applications of study skills in a clear

and concise, workbook style format. The text is known for providing ample exercises throughout each chapter, reflecting the author's belief that students can be taught how to learn more effectively through hands-on reinforcement. Now produced in two-color, the Fourth Edition has a sleek design and is organized around a new learning strategies framework. This framework includes chapter-opening objectives that preview the materials students are about to learn. The author presents the latest research on the brain, helping students to understand how they learn, how to capitalize on their strengths, and how to adjust for their weaknesses. Structured activities and exercises guide students in the reflection process to make the information personal and useful and to provide practice opportunities. The straightforward explanations and structured activities that model the learning process make this text especially useful for first time college students or returning adults. Survival Kit in the first pages of the text provides a quick overview of the most basic skills that students need to be productive from "day one." New to the Fourth Edition is a "Checklist for Evaluating your Classroom Savvy." Two new critical thinking features, Making It Concrete and Making Connections, help students analyze and synthesize what they've learned, and apply new concepts or skills to other courses or situations. Measurable Learning Outcomes have been added to the opening of each chapter, and can act as the basis for selecting content, classroom activities, and assessments such as chapter or unit tests and final projects or exams. Case Study: What's Your Advice? asks students to synthesize and evaluate what they learn in the form of advice to others. Virtual Field Trips are integrated technology boxes; these point to online assignments that explore college social skills such as managing finances, campus safety, and health and well-being issues. Brain Bytes show students how memory strategies work and provide tools to maximize retention for improved performance, school achievement, and personal success.

We commonly think of society as made of and by humans, but with the proliferation of machine learning and AI

technologies, this is clearly no longer the case. Billions of automated systems tacitly contribute to the social construction of reality by drawing algorithmic distinctions between the visible and the invisible, the relevant and the irrelevant, the likely and the unlikely - on and beyond platforms. Drawing on the work of Pierre Bourdieu, this book develops an original sociology of algorithms as social agents, actively participating in social life. Through a wide range of examples, Massimo Airoidi shows how society shapes algorithmic code, and how this culture in the code guides the practical behaviour of the code in the culture, shaping society in turn. The 'machine habitus' is the generative mechanism at work throughout myriads of feedback loops linking humans with artificial social agents, in the context of digital infrastructures and pre-digital social structures. Machine Habitus will be of great interest to students and scholars in sociology, media and cultural studies, science and technology studies and information technology, and to anyone interested in the growing role of algorithms and AI in our social and cultural life.
