

## Cases In Clinical Medicine

**This text presents a collection of clinical cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in clinical examinations in general internal medicine.**

**This is new edition of the book previously called Acute Clinical Medicine in the highly popular Kumar and Clark family. Cases in Clinical Medicine covers in handbook form the complete range of acute medical conditions and problems that junior doctors are likely to encounter during the first years of training. It is divided into chapters reflecting core medical specialties - including infectious diseases; STD; gastroenterology; etc. Each chapter is then subdivided into case-based problems, such as (for example) pyrexia of unknown origin (under the Infectious Disease Group), HIV/Aids (under STD) and Vomiting and Weight Loss (under Gastroenterology). Each problem follows a standard pattern or template: it begins with a case history, and is accompanied by short, succinct text divided up by headings such as 'What are the commonest causes of...'; What factors predispose to...' Where relevant there are also sections on pathology, pathophysiology and prognosis. Important points to note in the acute context are picked out in boxes ('Beware', 'Remember!' and 'Information') as are vital investigations. More than 200 cases Remember! boxes Investigations boxes Information boxes More than 200 cases.**

**You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its practical approach strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing problem-solving skills. The core areas of undergraduate study are covered in a logical sequence of learning activities: each case is followed by a detailed answer, along with a number of OSCE-style questions to help you practise for the exam. Related OSCE counselling style questions and answers also feature at the end of each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making the perfect revision aid for all types of case-based examination. The comprehensive volume, Medical and Surgical Specialties, focuses on the following topics: ENT Ophthalmology Haematology Orthopaedics and Trauma Oncology Neurology Urology Infectious Diseases Dermatology The Core Clinical Cases series is absolutely invaluable in the run up to clinical, written or OSCE examinations, and an essential revision aid for all undergraduate medical students at various stages in their clinical training. Steve Bain MA MD FRCP Professor of Medicine (Diabetes), University of Wales, Swansea & Honorary Consultant Physician, Swansea NHS Trust, Singleton Hospital, Swansea, UK Janesh K. Gupta MSc MD FRCOG Clinical Senior Lecturer & Honorary Consultant in Obstetrics and Gynaecology, University of Birmingham, Birmingham Women's Hospital, UK**

**Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology. Medicine moves at pace and it takes a practitioner committed to continuing professional development to keep up. This new edition of 250 Cases in Clinical Medicine has been thoroughly updated to reflect the changing form of the Royal College of Physicians' curriculum. Some chapters from the previous edition have been dropped to allow new, more clinically relevant topics to be included. Chapters of symptom-based cases have also been added, as well as a section on acute medical problems and their management. Essential reading for MBBS, PLAB, MRCP (UK), MRCPI, MD (New Zealand, Malaysia, Singapore, India, Pakistan, Sri Lanka and Bangladesh), FRACP, FCCP and postgraduate medical examinations in the USA including USMLE and ABIM. New author team Cases alphabetised by system Procedures for the core medical curriculum added Symptoms-based cases added Emergency presentations added Self-assessment by system added Accompanying e-book on StudentConsult Now in full colour**

Health Sciences & Professions

Making speedy and appropriate clinical decisions and then choosing the best course of action is an essential skill for doctors. Exploring assessment, 100 Cases in Clinical Medicine presents 100 scenarios commonly seen by medical students and junior doctors in the emergency department, on the ward, or in the community setting. Each case begins with a succinct summary of the patient's history, examination and investigation. The text includes photographs where relevant and questions on the diagnosis and management of each case. The answer discussion on each topic, with further illustration where appropriate. Most of the cases included are common problems but the book also includes unusual cases to illustrate specific points and to emphasize that rare things do present. The first 20 cases are arranged by systems; the remaining 80 cases are in random order because symptoms such as breathlessness and pain may relate to many different clinical problems in various systems. This book will teach students and junior doctors to recognize important clinical symptoms and signs and to develop the diagnostic and management skills for the cases they will encounter on the job.

Clinical cases in internal medicine with model answers to assist trainees in exam preparation. Presented in conversation style between a doctor and a candidate to resemble exam conditions. Includes mnemonics to help students recall long lists.

Test your knowledge in tropical medicine with Clinical Cases in Tropical Medicine! Boasting an easily accessible, highly templated format and photographs throughout, this medical reference book is designed to help anyone in the field better identify the tropical diseases they'll encounter. As a companion product to Manson's Tropical Diseases, Clinical Cases in Tropical Medicine offers over 75 cases covering today's most prevalent tropical diseases. An ideal study tool for infectious diseases fellows, doctors preparing for exams, primary care doctors with patients returning from abroad, health nurses and practitioners alike. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. At the forefront of tropical medicine with in-depth coverage of the latest research, including tropical neurology and AIDS- and HIV-associated diseases and their treatments. Study as efficiently as possible with help from a Q&A format and succinct summary boxes. Expand your knowledge concerning tropical diseases, as well as how diagnosis and treatment takes place in resource-poor settings. Gain a complete understanding of tropical diseases with this companion product to Manson's Tropical Diseases, 23rd Edition (ISBN: 978-0-7020-5101-2). A reading list at the end of each case directly refer to a corresponding chapter in Manson's, further expediting study.

## Clinical Cases

Short Cases in Clinical Medicine E-Book

Clinical Cases in Tropical Medicine E-Book

This concise yet comprehensive pocketbook makes basic lipid metabolism and the main principles of lipid-lowering treatment comprehensible to the reader without over-simplification.

A helpful learning manual for undergraduates and PG students preparing for FCPS, MD, MRCP, FRACP or any other equivalent exam in Internal Medicine. A completely new section (Section B) is included. The first section (Section A) contains short clinical cases, followed by relevant questions, their answers and brief discussions. Section B contains Data Interpretation, ECG, X-ray, coloured photograph of common diseases and few instruments, which are helpful for undergraduate students. An easy book to learn the approach to diagnosis and management of common short cases. Cases have been described in the way a student is expected to approach a medical situation in examinations as well as in day-to-day practice. Provides short notes on various common diseases, which will help the students to get a comprehensive knowledge without going through extensive textbooks. Have about 700 colored photographs and a few X-rays, CT scans, etc. to help students to develop a good clinical eye. Easy to understand, concise, yet full of necessary information.

This new addition to the popular 100 cases series explores common clinical scenarios that will be encountered by the medical student and junior doctor during practical training in the emergency department, in the community and in intensive and critical care settings, and which are likely to feature in qualifying examinations. The book covers a broad range of presentations, organized by sub-specialty area for ease of reference. Comprehensive answers highlight key take home points from each case and provide practical advice on how to deal with the challenges that occur when practising emergency and critical care medicine at all levels.

Davidson's 100 Clinical Cases was awarded First Prize in Medicine in the 2009 British Medical Association Medical Book Awards. This book reflects the real world in which doctors practise medicine. The selection of clinical problems guides the reader, step by step, through the correct path in the maze between the presenting complaint of a patient and the final diagnosis. The text emphasises the value of interpreting available clinical and investigative information in a logical way before considering a definitive diagnosis. The 100 cases are based on the 'presenting problems' of Davidson's Principles and Practice of Medicine. The book provides an international outlook reflecting the differences in the practice of medicine in the developing world and in low-resource settings, and addresses the epidemiological, economic and other reasons for many of these important differences. The cases are written by a team of senior doctors, from 12 countries, with considerable teaching experience. The book now includes 100 cases all closely linked to the 'presenting problems' sections of the latest 21st Edition of Davidson's Principles and Practice of Medicine. In this expanded new edition there are many new cases including aluminium phosphide poisoning; occupational lung disease; tremor; and drug interactions.

Short Cases in Clinical Medicine

A Manual of Clinical Medicine ... with cases to serve as exercises in clinical analysis

100 Cases in Clinical Pharmacology, Therapeutics and Prescribing

200 Short Cases in Clinical Medicine

**Another addition to the Kumar & Clark family of information for medical students and doctors!. The book is divided into chapters reflecting core medical specialties - including infectious diseases; STD; gastroenterology; etc. Each chapter is then subdivided into problems, such as pyrexia of unknown origin (under the Infectious Disease Group), HIV/Aids (under STD) and Vomiting and Weight Loss (under Gastroenterology).**

**Oxford Cases in Medicine and Surgery, second edition, teaches students a hypothesis-driven, logical step-by-step approach to diagnosis when faced with each of 29 common patient presentations. This approach mirrors that used by successful clinicians on the wards, challenging students with questions at each stage of a case (history-taking, examination, investigation, management). In tackling these questions, students understand how to critically analyse information and learn to integrate their existing knowledge to a real-life scenario from start to finish. Each chapter focuses on a common presenting symptom (e.g. chest pain). By starting with a symptom, mirroring real life settings, students learn to draw on their knowledge of different physiological systems - for example, cardiology, respiratory, gastroenterology - at the same time. All the major presenting symptoms in general medicine and surgery (mapped to UK medical school curricula) are covered, together with a broad range of pathologies. This book is an essential resource for all medicine students, and provides a modern, well-rounded introduction to life on the wards. Ideal for those starting out in clinical medicine and an ideal refresher for those revising for OSCEs and finals.**

**This useful new book enables students to apply the theoretical knowledge gained in their medicine classes to clinical cases. Students will improve their diagnostic skills as they are taken simply and logically through the steps of generating a differential diagnosis, weighing up evidence to refine a hypothesis, and constructing a management plan. Author Samy Azer guides readers to use self-directed learning to identify their learning needs and ultimately develop a deeper understanding of internal medicine. Designed to complement and enhance recommended undergraduate medicine textbooks, this book is easy to follow and written simply, making it suitable for students who speak English as a second language. More than 50 clinical cases, covering the core undergraduate medicine curriculum Case discussions using a logical and scientific approach to help students achieve their own diagnoses Model answers for comparison, to improve learning outcomes Summary of fundamental points for examination revision Useful up-to-date resources Short-answer and multiple-choice questions to test knowledge Diagrams and tables to deepen understanding and consolidate essential concepts Includes an Enhanced eBook version with purchase. The enhanced eBook allows the end user to access all of the text, figures, and references from the book on a variety of devices**

**This book provides case-based learning to people working in clinical medicine at a variety of grades – from clinical medical student to those in specialty training and beyond. The cases described in the book are based on real patients, focus on the interesting and complex and feature important learning points for all medical practitioners. This book brings together the expertise of over 50 specialists, providing a written version of the**

This book will serve as a helpful learning manual for undergraduate and PG students preparing for MBBS, FCPS, MD, MRCP, FRACP or any other equivalent examination in internal medicine or any other related subspecialty. An easy book to learn the approach in common short cases with the basic knowledge and skill, essential for presentation and interpretation in any examination. A complete outline of comprehensive medical encounter including physical examination and interpretation of gathered information to formulate a diagnosis. Provides short notes and brief discussions on various common diseases, helpful for a quick review without going through voluminous textbooks. 800 coloured photographs are there to help the students to develop a good clinical eye. Easy to understand, concise, yet full of necessary information. Some new short cases like "Inferior vena caval obstruction", "Tricuspid stenosis", "Pulmonary regurgitation", "Lobectomy and pneumonectomy", "Rheumatoid lung", "Polycythemia Rubra Vera" including many others are added. Also, new investigations and latest treatment protocols of many diseases are added, such as Filariasis, Atrial fibrillation, pneumothorax, consolidation, Kala-azar etc.

Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case.

Talks about internal medicine that is consulted by students and doctors throughout the world. The aim of this title is to explain the management of disease, based on an understanding of scientific principles, and including the developments in treatment. It is ideal for medical students and doctors preparing for specialist exams.

Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology.

Questions, Answers and Lessons Learned

A problem-solving approach

100 Cases in Clinical Medicine, Second Edition

250 Cases in Clinical Medicine E-BookElsevier Health Sciences

A 32-year-old Caucasian lady was admitted to hospital following a collapse at the gym. Her friends described the patient falling while exercising on the rowing machine, followed by twitching of her arms and legs and a period of being unrousable. You are on duty... 100 Cases in Acute Medicine presents 100 acute conditions commonly seen by medical students and junior doctors in the emergency department, or on the ward, or in the community setting. A succinct summary of the patient's history, examination, and initial investigations, including photographs where relevant, is followed by questions on the diagnosis and management of each case. The answer includes a detailed discussion of each topic, with further illustration where appropriate, providing an essential revision aid as well as a practical guide for students and junior doctors. Making clinical decisions and choosing the best course of action is one of the most challenging and difficult parts of training to become a doctor. These cases will teach students and junior doctors to recognize clinical symptoms and signs, and to develop their diagnostic and management skills.

100 Cases in Clinical Pharmacology, Therapeutics and Prescribing explores scenarios commonly seen by medical students and junior doctors in the ward, emergency department, outpatient clinic or in general practice in which an understanding of pharmacology and prescribing practice is central to successful clinical management and safe patient care. A succinct summary of the patient's history, examination and any initial investigations is followed by questions on the diagnosis and management of the case. The answer includes a detailed discussion on each topic, providing practical advice on how to deal with the challenges that occur when prescribing, such as drug planning, drug calculations, prescription review and adverse drug reactions. The book will be invaluable during clinical placement and is an ideal companion during preparation for the Prescribing Safety Assessment examination. Making speedy and appropriate clinical decisions, and choosing the best course of action to take as a result, is one of the most important and challenging parts of training to become a doctor. These true-to-life cases will teach students and junior doctors to prescribe appropriately, and to hone their diagnostic and management skills.

You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected facts. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the real world of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core topics of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, with detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key points and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter. This is the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised for this third edition, focuses on the following topics: \* Early pregnancy problems \* Pregnancy dating and fetal growth \* Late pregnancy problems \* Labour \* Medical disorders of pregnancy \* Puerperium \* Abnormal uterine bleeding \* Amenorrhoea and menopause \* Incontinence and prolapse \* Neoplasia \* Discharge and pain \* Infertility \* Fertility control Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training.

Cases in Clinical Medicine

A Step-by-Step Approach

250 Short Cases in Clinical Medicine

Core Clinical Cases in Obstetrics and Gynaecology Third Edition

A 27-year-old Ghanaian woman presents in the emergency department with a three-day history of headache, nausea, and vague lower abdominal pain. She has no significant past medical history, but is eight-weeks pregnant with her first child. She lives in London and returned from a trip to Ghana two weeks ago. You have been assigned her initial as

A guide to how to approach and pass the short cases in the clinical part of the Final MB and MRCP examinations. Each chapter begins with a brief summary of how to examine the relevant system and goes on to outline a selection of 200 clinical cases.

100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.

It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise. Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed diagrams and diagnostic imagery to aid understanding Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital readmission The Authors Andrew Solomon, BM BCH MA(Hons) DM FRCP, is a Consultant Physician, East and North Hertfordshire NHS Trust, Stevenage, UK. Julia Anstey, BSc (Hons) MBBS, is a Foundation Doctor, Somerset NHS Foundation Trust, Taunton, UK. Liora Wittner, MBBS BSc, is a Resident in Internal Medicine, Shamir Medical Centre, Be'er Ya'akov, Israel. With contributions from Priti Dutta, MBBS BSc FRCR, Consultant Radiologist, Royal Free London NHS Foundation Trust, London, UK.

Clinical Cases in Internal Medicine

100 Cases in Acute Medicine

Davidson's 100 Clinical Cases E-Book

**Rev. ed. of: Davidson's clinical cases. 2008.**

**A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP ...MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address: ● salient features ● history ● examination ● diagnosis ● questions covering investigations and differentiations ● advanced-level questions ● management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables**

**This practical self-assessment text tests examination candidates' underlying knowledge of clinical medicine and diagnostic skills. Each of the 250 cases reflects the exam setting, and focuses on what each candidate needs to know to pass.**
