An Atlas of Cat Anatomy can help a student learn twice as much as he could in the same amount of time using only a written description. The book is spiral bound and stands like an easel, taking

File Type PDF Cat Anatomy

a minimum amount of space in the work area. Altogether there are fifty-seven plates featuring the various parts and organ systems in their actual size, making identification remarkably

File Type PDF Cat Anatomy

easy. A brief verbal description accompanies each plate. In addition, the extensive glossary includes synonymous terms, derivations, definitions, and keys to pronunciation.

Written by two experienced veterinarians, *Anatomy of the Cat* covers all of the bones of the cat, the muscles of the feline and the central

File Type PDF Cat Anatomy

systems viable to their health. Anatomy of the Cat offers many interesting facts about feline physiology. The cat's senses are finely tuned for its natural instinct to hunt. Cats have specialized teeth for killing prey and tearing meat. Its tongue also works to tear meat as it has sharp

File Type PDF Cat Anatomy

spines that allow the animal to separate meat from bones. The cat's ears each have 32 muscles, allowing the animal to move each ear independently from the other.

Because of this mobility, cats are able to adjust their ears to the direction of certain sounds without moving their

File Type PDF Cat Anatomy

bodies, making them quicker to sense danger or nearby prey.

ALTHOUGH the cat has long been in common use for the practical study of mammalian anatomy, a clear, correct, not too voluminous account of its structure, such as should be in the hands of students in the

File Type PDF Cat Anatomy

laboratory, has remained a desideratum. A number of works have been published on the cat, some of them of much value, yet there is none which fulfils exactly the conditions mentioned. The books which

File Type PDF Cat Anatomy

have appeared on this subject are the following: 1. Strauss-Durckheim, H. Anatomie descriptive et comparative du Chat. 2 vols. Paris, 1845. 2. Mivart, St. George. The Cat: an Introduction to the Study of

W. A Laboratory Guide for the Dissection of the Cat. New York, 1895. 5. Jayne, H. Mammalian Anatomy. Vol. I. Philadelphia, 1898. The first of these works treats only of the muscles and bones, and is not available for

File Type PDF Cat Anatomy

American students. Its excellent plates (or Williams's outline reproductions of the same) should be in every laboratory. The second book named is written in such general terms that its descriptions are not

File Type PDF Cat Anatomy

readily applicable to the actual structures found in the dissection of the cat, and experience has shown that it is not fitted for a laboratory handbook. It contains, in addition to a general account of

File Type PDF Cat Anatomy

the anatomy of the cat, also a discussion of its embryology, psychology, palaeontology, and classification.

(*Felis catus*), also known as the domestic cat or housecat to distinguish it from other felids and felines, is a small, furry, domesticated, carnivorous mammal that is valued by humans for its companionship

File Type PDF Cat Anatomy

and for its ability to hunt vermin and household pests. Cats have been associated with humans for at least 9,500 years, and are currently the most popular pet in the world. Owing to their close association with

File Type PDF Cat Anatomy

humans, cats are now found almost everywhere in the world. Cats are similar in anatomy to the other felids, with strong, flexible bodies, quick reflexes, sharp retractable claws, and teeth adapted to killing small

File Type PDF Cat Anatomy

prey. As nocturnal predators, cats use their acute hearing and ability to see in near darkness to locate prey. Not only can cats hear sounds too faint for human ears, they can also hear sounds higher in

File Type PDF Cat Anatomy

frequency than humans can perceive. This is because the usual prey of cats (particularly rodents such as mice) make high frequency noises, so the hearing of the cat has evolved to pinpoint these faint high-

communication. These include meowing, purring, trilling, hissing, growling, and grunting. Cats have a...
