Covering basic theory, components, installation, maintenance, manufacturing, regulation and industry developments, Gas Turbines: A Handbook of Air, Sea and Land Applications is a broad-based introductory reference designed to give you the knowledge needed to succeed in the gas turbine industry, land, sea and air applications. Providing the big picture view that other detailed, data-focused resources lack, this book has a strong focus on the information needed to effectively decision-make and plan gas turbine system use for particular applications, taking into consideration not only operational requirements but long-term life-cycle costs in upkeep, repair and future use. With concise, easily digestible overviews of all important theoretical bases and a practical focus throughout, Gas Turbines is an ideal handbook for those new to the field or in the early stages of their career, as well as more experienced engineers looking for a reliable, one-stop reference that covers the breadth of the field. Covers installation, maintenance, manufacturer's specifications, performance criteria and future trends, offering a rounded view of the area that takes in technical detail as well as well as industry economics and outlook Updated with the latest industry developments, including new emission and efficiency regulations and their impact on gas turbine technology Over 300 pages of new/revised content, including new sections on microturbines, non-conventional fuel sources for microturbines, emissions, major developments in aircraft engines, use of coal gas and superheated steam, and new case histories throughout highlighting component improvements in all systems and sub-systems.

The Motor Ship

This book is strongly recommended to those engaged in activities involving the lubrication of machines, to lubricant manufacturers and to raw material producers. It brings together the experience of many companies, institutions and individual users in a variety of European countries. These user groups have monitored the effect of applying biolubricants to their equipment. Lubrication in Inland and Coastal Water Activities describes the various products available and gives an overview of the technical and environmental aspects of biolubricants. Attention is given to the range of biolubricants, their application and the importance of including all stakeholders in developing their use: from the lubricant manufacturers to the equipment manufacturers, from local users to governmental authorities. Lubrication in Inland and Coastal Water Activities is a valuable contribution towards the development of a responsible lubricant policy.
