Make every student fluent in the language of learning. The Common Core and ELD standards provide pathways to academic success through academic language. Using an integrated Curricular Framework, districts, schools and professional learning communities can:

- Design and implement thematic units for learning
- Draw from content and language standards to set targets for all students
- Examine standards-centered materials for academic language
- Collaborate in planning instruction and assessment within and across lessons
- Consider linguistic and cultural resources of the students
- Create differentiated content and language objectives
- Delve deeply into instructional strategies involving academic language
- Reflect on teaching and learning

Softbound Interactive Student Text is divided into a two-volume set that is perforated and 3-hole punched for easy organization for middle school students. This is volume 1.

Single User e-Book DVD for Teaching Student-Centered Mathematics, Grades K-3 brings John Van de Walle's best-selling professional development series to life and is designed for use by individual educators. The single user e-Book DVD gives kindergarten through grade 3 pre-service and in-service teachers quick and easy access to Teaching Student-Centered Mathematics: Grades K-3 along with interactive tools for teaching and professional development resources. The single user e-Book DVD includes one license, additional materials must be purchased separately. Based on John Van de Walle's leading K-8 mathematics methods textbook, Elementary and Middle School Mathematics, the professional development e-Book series helps teachers develop a deeper understanding of the mathematics they teach and is organized into three grade-band volumes. The interactive e-Books bring the student-centered, problem-based approach to life through embedded classroom videos, author interviews, virtual workshops and more. The e-Books Series is professional development with John Van de Walle, anywhere, anytime! The Single User e-Book DVD includes one license for use by an individual educator. The printed book is sold separately. The grade-band e-Book DVD allows you to click and:

- Observe lessons in action through video of classrooms
- See excerpts from John Van de Walle's professional development sessions without leaving the comfort of your home or school
- Hear John Van de Walle (late) speak about the Big Ideas in every chapter through a series of personal interviews
- Access tips and activities you can use in your classroom

The e-Book DVD series is based on the best-selling Van de Walle Professional Mathematics Series, which features:

- Numerous problem-based activities in every

content chapter are a fantastic resource for in-service teachers. "Big Ideas" provide clear and succinct explanations of the most critical concepts in K-3 mathematics. "Assessment Notes" illustrate how assessment is an integral part of instruction and suggest the most successful assessment strategies. Expanded lessons elaborate on one activity in each chapter, providing techniques for creating step-by-step lesson plans for classroom implementation. NCTM Standards appendices provide information on the content and professional standards. Reproducible blackline masters provide basic tools and copymasters for use in the classroom. Enrichment clusters engage students and facilitators in student-driven, real-world learning experiences. Grouped by interest, students working like practicing professionals apply advanced content and methods to develop products and services for authentic audiences. Clusters are scheduled during the school day over an extended period of time and involve all students. This updated second edition of Enrichment Clusters provides the rationale for including this important enrichment program for all students, suggestions for creating buy-in, and a step-by-step guide for successful implementation of a self-sustaining enrichment cluster program within the context of specific schools. Included are staff

development activities, suggestions for evaluation and program improvement, guidelines for developing high quality cluster experiences for teachers and students, suggested resources, and everything one needs to develop, implement, and sustain a top-quality enrichment cluster program.

Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. *Helping Children Learn Mathematics* provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre--kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

"In the Fall of 2010 I gave an assignment in my Appalachian Literature class at Berea College, telling my students to write their own version of "Where I'm From" poem based on the writing prompt and poem by George Ella Lyon, one of the preeminent Appalachian poets. I was so impressed by the results of the assignment that I felt the poems needed to be preserved in a bound document. Thus, this little book. These students completely captured the complexities of this region and their poems contain all the joys and sorrows of living in Appalachia. I am proud that they were my students and I am very proud that together we produced this record of contemporary Appalachian Life" -- Silas House

This work is an important contribution to the field of writing instruction, but it is also a great read. The advice is practical, the resources helpful, and the discussion thought provoking. Fleischer and Andrew-Vaughan are wonderful guides on the journey through the Unfamiliar Genre Project...they invite us in, earn our trust, and then support us as we take on a new and unfamiliar challenge. Enjoy the journey! -Heather Lattimer Author of Thinking Through Genre If genre study isn't in your curriculum and standards documents, it's likely to be soon. But which genres are the most useful for students to study? And how do you find time to cover them all? Writing Outside Your Comfort Zone answers these questions. It shows how immersing students in one genre that they aren't familiar with helps them understand the concept of genre in general and strengthens their reading and writing. In Writing Outside Your Comfort Zone Cathy Fleischer and Sarah Andrew-Vaughan present the Unfamiliar Genre Project. Through this extended reading and writing sequence, your students will discover the skills to be savvy in any genre, and you'll find ways to support them. The Unfamiliar Genre Project helps you: develop students' thinking about writing fundamentals such as purpose, audience, form, topic selection, and word choice support adolescents' test-taking abilities by increasing their

awareness of the genre characteristics of test writing fully engage students by connecting school writing to their outside interests truly integrate the English curriculum by studying genre from the points of view of both readers and writers. Fleischer and Andrew-Vaughan give you highly detailed, specific ideas for teaching the Unfamiliar Genre Project. Their organizational structures, lessons, and variations for classrooms in different settings will help you plan and implement the project with ease. Read *Writing Outside Your Comfort Zone* and teach the Unfamiliar Genre Project. You'll soon discover how to boost students' achievement in every genre as they study just one.

Minilessons for Operations with Fractions is a yearlong resource guide in *Contexts for Learning Mathematics' Investigating Fractions, Decimals, and Percents (4-6)* *Minilessons for Operations with Fractions, Decimals, and Percents* is a resource of approximately 75 minilessons that you can choose from throughout the year. In contrast to investigations, which constitute the heart of the math workshop, the minilesson is more guided and more explicit, designed to be used at the start of math workshop and to last for ten to fifteen minutes. Each day, no matter what other materials you are using, you might choose a minilesson from this resource to help your students develop efficient computation. You can also use minilessons with small groups of students as you differentiate instruction. The minilessons in this guide were designed to be used in grades 5-6. Each minilesson is crafted as a tightly structured series, or "string," of computation problems designed to encourage students to look to the numbers first, before they decide on a computation strategy. The strings are likely to generate discussion on certain strategies or big ideas underlying an understanding of operations with rational numbers. Although the emphasis is on the development of mental arithmetic strategies, this does not mean learners have to solve the problems in their heads-but it is important for them to do the problems with their heads! In other words, as you use this guide, encourage students to examine the numbers in each problem and think about clever, efficient ways to solve it. The relationships between the problems in the minilesson will support students as they progress through the string. Several models are employed that can be helpful for computation. Money and the clock enable students to work with landmark fractions easily. The double open number line allows for generalizable strategies such as the use of common denominators for addition and subtraction. The open array and the ratio table are used with multiplication and division throughout to represent student strategies. To learn more visit <http://www.contextsforlearning.com>

Teaching Historical Thinking in Grades 7-12

Every major measure of students' historical understanding since 1917 has demonstrated that students do not retain, understand, or enjoy their school experiences with history. Bruce Lesh believes that this is due to the way we teach history -- lecture and memorization. Over the last fifteen years, Bruce has refined a method of teaching history that mirrors the process used by historians, where students are taught to ask questions of evidence and develop historical explanations. --from publisher description.
