*among servers, clouds and networks over which the audited firm has no control. Additionally, a firm's data—particularly in the case of finance, software, insurance and biotech firms— comprises most of the audited value of the firm. Financial audits are critical mechanisms for ensuring the integrity of information systems and the reporting of organizational finances. They help avoid the abuses that led to passage of legislation such as the Foreign Corrupt Practices Act (1977), and the Sarbanes-Oxley Act (2002). Audit effectiveness has declined over the past two decades as auditor skillsets have failed to keep up with advances in information technology. Information and communication technology lie at the core of commerce today and are integrated in business processes around the world. This book is designed to meet the increasing need of audit professionals to understand information technology and the controls required to manage it. The material included focuses on the requirements for annual Securities and Exchange Commission audits (10-K) for listed corporations. *the benefits it has brought. This important book offers a way of improving this prevailing perception and increasing the value of control and risk management by bringing creativity and design skills to the fore. The value of risk and control activities is often limited by the value of the control ideas available and so Matthew Leitch provides an arsenal of 60 high performance control mechanisms. These include several alternative ways to design controls and control systems, as well as providing controls for monitoring and audit, controls for accelerated learning, and techniques for finding and recovering cash. This design material is combined with insights into the psychology of risk control, strategies for encouraging helpful behaviour and enabling change, and a surprisingly simple integration of internal control with risk management. The book is realistic, practical, original, and easier reading than most in the field. The material is not specific to any one country and has international appeal for internal auditors and all those concerned with risk management, corporate governance and security.*
