“ An intense, immersive deep dive into a wild, dangerous, and unknown world, written with the pace and appeal of a great thriller. This is nonfiction at its very best. ” —Lee Child The true story of two doomed ships and a daring search-and-rescue operation that shines a light on the elite Coast Guard swimmers trained for the most dangerous ocean missions In late September 2015, Hurricane Joaquin swept past the Bahamas and swallowed a pair of cargo vessels in its destructive path: El Faro, a 790-foot American behemoth with a crew of thirty-

three, and the *Minouche*, a 230-foot freighter with a dozen sailors aboard. From the parallel stories of these ships and their final journeys, Tristram Korten weaves a remarkable tale of two veteran sea captains from very different worlds, the harrowing ordeals of their desperate crews, and the Coast Guard's extraordinary battle against a storm that defied prediction. When the Coast Guard received word from Captain Renelo Gelera that the *Minouche* was taking on water on the night of October 1, the servicemen on duty helicoptered through Joaquin to the sinking ship. Rescue swimmer Ben Cournia dropped into the sea—in the middle of a raging tropical cyclone, in the

dark—and churned through the monstrous swells, loading survivors into a rescue basket dangling from the helicopter as its pilot struggled against the tempest. With pulsating narrative skill in the tradition of Sebastian Junger and Jon Krakauer, Korten recounts the heroic efforts by Cournia and his fellow guardsmen to haul the *Minouche*'s crew to safety. Tragically, things would not go as well for Captain Michael Davidson and *El Faro*. Despite exhaustive searching by her would-be rescuers, the loss of the vessel became the largest U.S. maritime disaster in decades. Cryptography is now ubiquitous – moving beyond the traditional environments, such as government communications and banking systems, we see cryptographic techniques realized in Web browsers, e-mail programs, cell phones, manufacturing systems, embedded software, smart buildings, cars, and even medical implants. Today's designers need a comprehensive understanding of applied cryptography. After an introduction to cryptography and data security, the authors explain the main techniques in modern cryptography, with chapters addressing stream ciphers, the Data Encryption Standard (DES) and

Throughout the book, the authors focus on communicating the essentials and keeping the mathematics to a minimum, and they move quickly from explaining the foundations to describing practical implementations, including recent topics such as lightweight ciphers for

The book is a short review of British air and naval power from 1909 -1940 and represents an attack upon “independent” airpower. When Bleriot became the first man to fly the English Channel in a heavier-than-air flying machine in 1909, it seemed to mark the beginning of a fundamental decline in British attitudes towards maritime defense. Exploiting prevalent invasion paranoia, press baron, Lord Northcliffe invited distinguished writers such as William Le Queue and H G Wells to write articles on the theme “We are no longer an

Island”. Bleriot’s exploit encouraged the politicians to reassess how Britain would be defended in the future. An important government committee heard evidence that led directly to the forming of the Royal Flying Corps – an organization that initially included army and naval wings. Superficially, the Royal Navy was moving from strength to strength as it expanded in the naval arms race with Germany. The service remained in high public esteem but a section of the ruling Liberal party wanted money diverted for welfare – a new and powerful competitor for funds. The Two-Power Standard was quietly dropped in 1909 and the astronomical costs

of battleship building forced the Navy to look for cheaper substitutes such as submarines and aircraft. A forceful critic of naval expenditure, Winston S. Churchill fostered the early development of airpower when he became First Lord in 1911 and continued to do so when out of office. The German air raids of 1917 panicked the wartime government into making an ill-considered merger of naval and army air arms that supported imaginative but untried theories of airpower. In 1938, a later government submitted to the national psychosis of bombing by allowing the Royal Air Force to be the only service to rearm without regard to the nation's ability to afford it. In

1940, the contribution of the Royal Navy was minimized as Churchill praised the RAF for saving the nation from invasion in the Battle of Britain. As a result the RAF's story has achieved an iconic status that is part of British national identity. Consequently, more important operations including the Dunkirk evacuation; Battle of the Atlantic; Battle of Mers El Kebir and the naval operations against the Italian fleet have been underrated and misunderstood. This ultimate justification of independent airpower continues to undermine understandings of maritime defense and may have skewed US and UK defense policies in the wrong

The dramatic history of living American soldiers left in Vietnam, and the first full account of the circumstances that left them there *An Enormous Crime* is nothing less than shocking. Based on thousands of pages of public and previously classified documents, it makes an utterly convincing case that when the American government withdrew its forces from Vietnam, it knowingly abandoned hundreds of POWs to their fate. The product of

twenty-five years of research by former Congressman Bill Hendon and attorney Elizabeth A. Stewart, *An Enormous Crime* brilliantly exposes the reasons why these American soldiers and airmen were held back by the North Vietnamese at Operation Homecoming in 1973 and what these men have endured since. Despite hundreds of postwar sightings and intelligence reports telling of Americans being held captive throughout Vietnam and Laos, Washington did nothing. And despite numerous secret military signals and codes sent from the desperate POWs themselves, the Pentagon did not act. Even in 1988, a U.S. spy satellite passing over Sam Neua Province, Laos, spotted the twelve-foot-tall letters "USA" and immediately beneath them a huge, highly classified Vietnam

War-era USAF/USN Escape & Evasion code in a rice paddy in a narrow mountain valley. The letters "USA" appeared to have been dug out of the ground, while the code appeared to have been fashioned from rice straw (see jacket photograph). Tragically, the brave men who constructed these codes have not yet come home. Nor have any of the other American POWs who the postwar intelligence shows have laid down similar codes, secret messages, and secret authenticators in rice paddies and fields and garden plots and along trails in both Laos and Vietnam. An Enormous Crime is based on open-source documents and reports, and thousands of declassified intelligence reports and satellite imagery, as well as author interviews and personal experience. It is a singular work, telling

a story unlike any other in our modern history: ugly, harrowing, and true. From the Bay of Pigs, where John and Robert Kennedy struck a deal with Fidel Castro that led to freedom for the Bay of Pigs prisoners, to the Paris Peace Accords, in which the authors argue Kissinger and Nixon sold American soldiers down the river for political gain, to a continued reluctance to revisit the possibility of reclaiming any men who might still survive, we have a story untold for decades. And with *An Enormous Crime* we have for the first time a comprehensive history of America's leaders in their worst hour; of life-and-death decision making based on politics, not intelligence; and of men lost to their families and the country they serve, betrayed by their own leaders.
