Hunters And
Gatherers
In the first chapter I show
that an explanation for
human altruism cannot
rely solely on direct
reciprocity and likely
requires both cultural
selection and groups. In
the second I argue, with
Sarah Mathew, that this
insight applies especially
well to between-group
conflict in humans and

Bookmark File

altruistically in economic experiments at much higher levels than would be expected if their goal was maximizing economic returns - even when interactions are anonymous and one-shot. This is a puzzle because there is no personal benefit in paying a cost to help another play in one-shot anonymous interactions.

Bookmark File

PDF Chapter 2

The Earliest

Human Societies

What are the origins of this seemingly altruistic behavior? This paper explores the logic of two competing hypotheses.

The "norm psychology" hypothesis holds that pro-social play stems primarily from socially-

learned cultural norms. Its premise is that, over the course of human evolutionary history,

cultural norms varied

Bookmark File

PDF Chapter 2

The Earliest

Human Societies

Hunter-Gatherers

Gatherers

considerably across human societies and, through a process of gene-culture co-evolution, humans evolved mechanisms to learn and adopt the norms of their particular society. One-shot cooperation in economic experiments can be explained by the heavy influence of these local norms on human's interpretation of the way

Bookmark File

PDF Chapter 2

The Earliest Human Societies

to play the game. In contrast, the "evolutionary mismatch" hypothesis holds that pro-social preferences evolved genetically among our hunter-gatherer ancestors. Its premise is that hunter-gather groups were highly altruistic because anonymous or one-shot interactions were rare

Bookmark File

PDF Chapter 2

The Earliest
Human Societies

settings. In Chapter 1 I compare whether the conditions thought to create these genetic predispositions, repeated interactions under uncertainty, better support the conditions for the mismatch hypothesis (groups will be predominantly cooperative) or the norm psychology hypothesis (there will be wide

Bookmark File

PDF Chapter 2

variation between
groups). As a test case, I

adopt a model of the
mismatch hypothesis
developed by Delton,
Krasnow, Cosmides and
Tooby (DKCT). In the
model agents play
Prisoner's Dilemma
games, but are uncertain
whether an interaction is
one-shot or repeated. In
DKCT's simulations,
populations of agents

Bookmark File

PDF Chapter 2

The Earliest
Human Societies
Hunters And
Gatherers

consistently evolve high levels of cooperation in one-shot games, even when they have strong evidence that an interaction is not repeated. This finding is consistent with the premises of the mismatch hypothesis. However, DKCT limit their agents' strategic possibilities to only two strategies, Tit-for-Tat (TFT) or Always

Bookmark File

PDF Chapter 2

The Earliest

Human Societies

Hunters And

Gatherers

Defect (ALLD). I show that their results are an artifact of the particular evolutionary trajectory caused by the interaction between these strategies. With different mixes of initial strategies, even when TFT starts out very common, the resulting frequency of one-shot cooperation varies widely - in some cases driving one-shot cooperation

Bookmark File

PDF Chapter 2

The Earliest
Human Societies
Hunters And
Gatherers

almost entirely from the population under a wide range of conditions. This finding better supports the norm psychology hypothesis than the mismatch hypothesis. I conclude that understanding variation between human groups is key for understanding the conditions that favor altruistic cooperation in human metapopulations.

Bookmark File

PDF Chapter 2

The Earliest Human Societies

Human warfare is an evolutionary puzzle because humans take high personal risk that may benefit their group, but when these groups are large the vast majority of group members are genetically unrelated. In other species the scale and intensity of intergroup violence is constrained by genetic relatedness. We argue

that the scale and intensity of human warfare can best be explained by cultural selection operating in a group-structured environment (group-structured cultural selection). This view is backed by theoretical and empirical findings showing that cultural variation is much more likely than genetic

Bookmark File

PDF Chapter 2

The Earliest
