This title describes the state of the art in all areas of spatial marketing, discussing the various constituents which make up the geography of markets. Demand varies according to location and can be measured according to revenue, the number of households, spending patterns and lifestyles. Supply is also dependent on position, because prices, services, products and available shops rely on location, while the difference between supply and demand is the rationale for the role of the trader. The book also covers the way geographic techniques help to solve marketing problems and contains chapters written by contributors with extensive experience in this field; given that it is crucial for companies to direct their marketing correctly at their target audience, this will be indispensable reading for those involved in this area.

Inhaltsangabe:Abstract: The idea of understanding consumer behaviour as a sequential decision-making process is one that is common in marketing. The decision-making process itself is presented as a logical flow of activities, working from problem recognition to purchase to post-purchase evaluation. This decision-making process is affected by a number of other more complex influences. Some of these influences relate to the wider environment in which the decision is being made while others relate to the individual who makes the decision. In this context, ... [o]ne of the most widely accepted notions in consumer behavior is that word-of-mouth communication (hereafter WOM) plays an important role in shaping consumers' attitudes and behaviors. More specifically, WOM communications between consumers are a topic of interest in both the pre-purchase and post-purchase decision-making literature. Research into the diffusion of innovations has focused on modelling the role of WOM in product adoption at various stages of the diffusion process. WOM has also been studied as a mechanism through which consumers convey both informational and normative influences in the product evaluation. Finally, WOM has been identified as an important post-purchase complaining option. Although WOM plays an important role in consumer pre-purchase and post-purchase decision-making, research into this phenomenon has been fragmented. Importantly, relatively little attention has been directed at understanding key issues with respect to WOM recommendation sources and the factors that influence their use. The aim of the present work is to add to this small body of empirical research. The main part of this paper is divided into two chapters. Chapter 2, that follows an introduction to the work, is a theoretical one. It is a review of the literature on consumer decision-making and the individual and environmental influences on it. Emphasis is being placed on WOM communication and its role in understanding consumer behaviour. Chapter 3 focuses on the choice of WOM recommendation sources. Empirical research is presented which explores the influences on the choice over WOM recommendation sources. Finally, concluding remarks and recommendations for further research can be found in chapter 4. William Wilkie has succeeded in writing a book on consumer behavior that is stimulating, provides clear explanations, and is a pleasure to read. Considering such issues as why people buy some products and not others, why some consumers spend frugally while others run up large debts, what role the marketing system plays in consumer behavior, and how a marketer actually influences a consumer, it includes the best and useful frameworks and marketing "rules of thumb" that tie concepts together and apply them to the reality of the marketer's role. In this Second Edition, topical coverage has been organized more clearly and coverage of market segmentation has been greatly expanded. A section on organizational buying behavior had been added, and the expanded "notes" section has been placed at the back of the book for easy access.

Why do consumers make the purchases they do, and which ones make them truly happy? Why are consumers willing to spend huge sums of money to appear high status? This Handbook addresses these key questions and many more. It provides a comprehensive overview of consumer psychology, examining cutting-edge research at the individual, interpersonal, and societal levels. Leading scholars summarize past and current findings, and consider future lines of inquiry to deepen our understanding of the psychology behind consumers' decision making, their interactions with other consumers, and the effects of societal factors on consumption. The Cambridge Handbook of Consumer Psychology will act as a valuable guide for faculty as well as graduate and undergraduate students in psychology, marketing, management, sociology, and anthropology.

Essentials of Consumer Behavior offers an alternative to traditional textbooks for graduate students. Shorter than competing books, but no less rigorous, it includes unique material on vulnerable consumers and ethics. Balancing a strong academic foundation with a practical approach, Stephens emphasizes that consumer behavior does not simply equate to buyer behavior. She examines the thoughts, feelings, and behaviors that shape consumers' attitudes and motivations in relation to brands, products, and marketing messages. Providing a concise guide to the discipline, the author covers key themes such as vulnerable consumers, new technologies, and collaborative consumption. The book is supported by a rich companion website offering links to videos and podcasts, surveys, quizzes, further readings, and more. It will be a valuable text for any graduate student of consumer behavior or marketing, as well as any interested consumers.

Inhaltsangabe:Introduction: 1.1, Problem Statement: It is a widely spread fact that everybody wants to become old but the fewest want to be old. But it is also a fact that we cannot stop the age. It may exist ways and means to keep your mental and physical skills in a good shape but with every day we will become older one day anyway. The only alternative of getting older by the way doesn t seem to be much tempting why people accept the tide someday. What in this case only is concerning the single one also applies to whole societies. Tomorrow everybody will be older, the group of the over 50s is continuously increasing. So the aged will become more, but will they also become older mental or physically as a consequence? Nowadays, an increasingly number of seniors is more healthy and powerful than their parent generation. And they are highly attractive for companies but were disregarded for a long time when for example addressing advertisements. May it be because they are seen as less open for new products or due to the fact that they are supposed to show less involvement when confronted with advertisement. The reasons are multifarious. But the same as our society will continuously change the over 50s have also changed in their behavior. Companies haven t dealt with the over 50s as a target group for a long period of time. Older people are often associated with gridlocked habits and a certain rejection to new things like already mentioned. But is this true? Do they act or react different due to their age than their younger counterparts? Are the above mentioned prejudices in fact only the opinion of some companies? This questions need to be answered especially when regarding the society change creeping over us. 1.2, Terminologies: All relevant terms concerning the title of this thesis will be explained in the following chapters. For example, the meaning of innovation is explained in chapter 4 Innovativeness and the meaning of consumer good will be explained in chapter about 3 Consumer Behavior . The idea behind this is to guarantee that the words are understood when they are needed in a logical way. 1.3, Goals and Structure of the Thesis: This thesis aims to answer several questions. First, the reader should get a feeling for the socio-demographic change we are facing in Germany and the consequential change not only for our society but also for our economy. In the following, it should be understood the over 50s main characteristics, how they [...]

Word-of-Mouth: Influences on the choice of Recommendation Sources

The creation and expression of identity (or of multiple identities) in immersive computer-mediated environments (CMEs) is rapidly transforming consumer behavior. The various social networking and gaming sites have millions of registered users worldwide, and major corporations are beginning to attempt to reach and entice the growing flood of consumers occupying these virtual worlds. Despite this huge potential, however, experts know very little about the best way to talk to consumers in these online environments. How will well-established research findings from the offline world transfer to CMEs? That's where "Virtual Social Identity and Consumer Behavior" comes in. Written by two of the leading experts in the field, it presents cutting-edge academic research on virtual social identity, explores consumer behavior in virtual worlds, and offers important implications for marketers interested in working in these environments. The book provides special insight into the largest and fastest growing group of users - kids and teens. There is no better source for understanding the impact of virtual social identities on consumers, consumer behavior, and electronic commerce.

For advanced courses in economic analysis, this book presents the economic theory of consumer behavior, focusing on the applications of the theory to welfare economics and econometric analysis.

Although one perspective depicts young consumers as vulnerable and passive in the marketplace system, our knowledge of this consumer group will be inadequate if limited to this contention. Their roles and relevance in family consumption activities are becoming increasingly profound. Available evidence shows that they cannot be ignored in the marketplace dynamics as they consume goods and services in their households and are involved in various other active roles in their household consumption including making decisions where applicable. Hence, the landscape of young consumer behaviour is changing. Young Consumer Behaviour: A Research Companion focusses on exploring the behaviour of young consumers as individuals and societal members. The chapters address different aspects of consumption activities of children as individuals like motivation, involvement, perception, learning, attitude, the self, and personality. Similarly, chapters on consumer behaviour in social settings contextualised to young consumers including culture, sub-culture, family, and groups are incorporated into the book. This book fills a gap in the literature by addressing the dynamics of consumption patterns of this consumer group, in relation to various marketing stimuli and different stakeholders. It combines eclectic perspectives on the topic and specifically, bridges the gap between historical perspectives and contemporary issues. Building on the extant literature in the field of marketing and consumer behaviour, this book is a compendium of research materials and constitutes an essential reference source on young consumer behaviour issues with both academic and managerial implications.

Consumer Behavior in Action is a down-to-earth, highly engaging, and thorough introduction to consumer behavior. It goes further than other consumer behavior textbooks to generate student interest and activity through extensive use of in-class and written applications exercises. Each chapter presents several exercises, in self-contained units, each with its own applications. Learning objectives, background, and context are provided in an easy-to-digest format with liberal use of lists and bullet points. Also included in each chapter are a key concepts list, review questions, and a solid summary to help initiate further student research. The author's practical focus and clear, conversational writing style, combined with an active-learning approach, make this textbook the student-friendly choice for courses on consumer behavior.

No time in the history, consumption is considered to be as important as in today's world. It defines who we are, how well/perfect we perform our multiroles within the society (buying the most expensive clothes means being the best mom for instances), what symbolic meanings we attribute to our belongings, and how rich/clever/fashion conscious or innovative we are. Due to multidisciplinary and multimethod character of the concept of consumer behavior, it is appropriate to study it accordingly in order to understand the subject with its different aspects and holistically. Especially with the cultural, social, and technological changes within today's world, this issue becomes prominent. This book is a modest try for that end.

This book examines consumer behavior using the "life course" paradigm, a multidisciplinary framework for studying people's lives, structural contexts, and social change. It contributes to marketing research by providing new insights into the study of consumer behavior and illustrating how to apply the life course paradigm's concepts and theoretical perspectives to study consumer topics in an innovative way. Although a growing number of marketing researchers, either implicitly or explicitly, subscribe to life course perspectives for studying a variety of consumer behaviors, their efforts have been limited due to a lack of theories and methods that would help them study consumers over the lifecycle. When studying consumers over their lifespan, researchers examine differences in the consumer behaviors of various age groups (e.g., children, baby boomers, elderly, etc.) or family life stages (e.g., bachelors, full nesters, empty nesters, etc.), inferring that consumer behavior changes over time or linking consumption behaviors to previous experiences and future expectations. Such efforts, however, have yet to benefit from an interdisciplinary research approach. This book fills this gap in consumer research by informing readers about the differences between some of the most commonly used models for studying consumers over their lifespan and the life course paradigm, and providing implications for research, public policy, and marketing practice. Presenting applications of the life course approach in such research topics as decision making, maladaptive behaviors (e.g., compulsive buying, binge eating), consumer well-being, and cognitive decline, this book is beneficial for students, scholars, professors, practitioners, and policy makers in consumer behavior, consumer research, consumer psychology, and marketing research.

Over the past two decades, the face of the world consumer has truly changed. Goods are more available, information about these goods is more open and accessible, and the ability to buy these goods from any corner of the earth has become possible. As a result, international marketing is more important now than ever before. In this book, Josh Samli explores the challenges facing modern international marketers. He explains what it is to have successful communication with the target market: using social media to share consistent information about products and services, communicating directly with culture-driven consumers who already communicate online amongst themselves and with competitors, and mastering people-to-people communication with both privileged and non-privileged consumers. Any company dealing with international marketing must learn how to handle these new challenges in order to survive in the 21st century.

After years of study in the area of consumer behavior, Mullen and Johnson bring together a broad survey of small answers to a big question: "Why do consumers do what they do?" This book provides an expansive, accessible presentation of current psychological theory and research as it illuminates fundamental issues regarding the psychology of consumer behavior. The authors hypothesize that an improved understanding of consumer behavior could be employed to more successfully influence consumers' use of products, goods, and services. At the same time, an improved understanding of consumer behavior might be used to serve as an advocate for consumers in their interactions in the marketplace.

Research on the influence of culture on consumer decision-making and consumption behavior has witnessed tremendous growth in the last decade. With increasing globalization, managers are becoming increasingly aware that operating in multiple markets is crucial for firms' survival and growth. As the world's growth engine shifts from Europe and North America to Asia and Latin America, it has become apparent that an inward-looking and domestic focus strategy will not be sustainable in the long run. And success in foreign markets requires marketers to understand not just what consumers in these markets need but also how they think, behave, consume, and purchase. Numerous studies have documented cultural differences in values and beliefs, motivational orientations, emotions, self-regulation, and information-processing styles, and the effects of these cultural variations on consumer behavior such as brand evaluation, materialism, and impulsive consumption. In this volume, experts from a variety of disciplines and perspectives trace the historical development of culture research in consumer psychology and examine the theoretical underpinnings that account for these findings and the current state of the field. Collectively, the chapters provide a forum for researchers to engage in thoughtful debates and stimulating conversations and offer directions for future research.

There is broad consensus on the need to shift to a new paradigm of lifestyles and economic development, given the un-sustainability of current patterns. Given this, research on consumer behavior is to play a crucial role in shedding light on the motives underpinning the adoption of responsible behaviors. Stemming from a thorough discussion of existing approaches, this book argues that the perspective of analysis has to be modified. First, acknowledging that a profile of the responsible consumer does not exist since all of us can be more or less sustainable and environment-friendly: the sustainability of an individual should not be considered as given, being something dynamic that changes according to both subjective and contextual factors. Moreover, the book hypothesizes that integrating dimensions and perspectives that have been so far overlooked by mainstream research will help deconstruct responsible behaviors adopting a flexible and holistic approach. Relevant policy implications are discussed, and empirical research on responsible behaviors is illustrated. This book will be of great interest to students and scholars of consumer behavior, sustainable consumption, environmental psychology and environmental studies in general.
