

## ***Chapter 31 Section 2 A Worldwide Depression Reteaching Activity Key***

Rett syndrome (RTT) is a severe neurodevelopmental disorder primarily affecting females that has an incidence of 1:10000 female births, one of the most common genetic causes of severe mental retardation in females. Development is apparently normal for the first 6–18 months until fine and gross motor skills and social interaction are lost, and stereotypic hand movements develop. Progression and severity of the classical form of RTT are most variable, and there are a number of atypical variants, including congenital, early onset seizure, preserved speech variant, and “forme fruste.” Mutations in the X-linked gene methyl-CpG-binding protein 2 (MECP2) involve most of the classical RTT patients. Mutations in cyclin-dependent kinase like 5 (CDKL5) and FoxG1 genes have been identified in the early onset seizure and the congenital variants respectively. Management of RTT is mainly symptomatic and individualized. It focuses on optimizing each patient's abilities. A dynamic multidisciplinary approach is most effective, with specific attention given to epileptic and nonepileptic paroxysmal events, as well as scoliosis, osteoporosis, and the development of spasticity, which can have a major impact on mobility, and to the development of effective communication strategies for these severely disabled individuals.

zoster virus (VZV). Both the acute, primary infection and the reactivation from the site of latent infection, the dorsal sensory ganglia, are associated with severe human morbidity and mortality. The peripheral nervous system is one of the major loci affected by these viruses. The present review details the virology and molecular biology underlying the human infection. This is followed by detailed description of the symtomatology, clinical presentation, diagnosis, course, therapy, and prognosis of disorders of the peripheral nervous system caused by these viruses.

Enforcement of Foreign Arbitral Awards in Russia presents issues peculiar to the Russian legal system and legal culture generally. The culmination of perhaps years of arbitration, enforcement of arbitral awards is a crucial element of arbitration and a subject best not taken lightly or left to the last minute. The Enforcement of Foreign Arbitral Awards in Russia parses the judgments of Russian courts, with a particular focus on the decision-making processes of Russian judges as reflected in their judgments. The Enforcement of Foreign Arbitral Awards in Russia addresses several questions, such as: • Which Russian courts enforce awards and what are they like? • What laws, treaties, and rules apply? • How do the courts

## Acces PDF Chapter 31 Section 2 A Worldwide Depression Reteaching Activity Key

reach their decisions? • Do those courts sometimes reach anomalous conclusions? • What should an applicant for enforcement watch out for? • What are the common pitfalls? With the help of Enforcement of Foreign Arbitral Awards in Russia non-Russian readers will be able to ask intelligent questions, earlier rather than later, of the local counsel who will be making an application for enforcement in the Russian courts.
