Fraud and Education gives an informative overview of cheating in examinations in the U.S. and foreign countries and of the current state of fraud in education and research. It differs however, from many popular treatises on the same subject, in that it is not intended as a blanket condemnation of American (or foreign) education. Instead of assigning blame for the prevalence of fraud, the authors point to such factors as growth in the number of persons engaged in education and research, pressures on individuals to succeed, improvements in communications (especially the Internet and e-mail), and in techniques of document reproduction.

This paper is an updated presentation on the subject of cheating and plagiarism via the World Wide Web. In a few hours searching the Internet, the author found even more "cheat" sites than in 1998 that offered not only all types of term and research papers, but college admission letters, reviews, case studies, even dissertations as well. Most now offer papers that are fully documented and cited, at no extra charge. Many more sites offer free papers than ever before and list the "Top 100" sites as links. CheatHouse has more than 66,000 papers available in 130 categories for only \$9.95 per year. The site eCheat lists their services as "collaboration" not cheating. Many still pretend to be "reference" or "research" sites, but others have given up that facade. Though it is difficult, if not impossible, to stop cheating and plagiarism completely, several successful strategies have been developed and tried over the years. Some are updates of older methods and others are as new as using the Internet. One is to avoid giving open-ended or generic topic assignments. Plagiarism detection programs, like Turnitin.com are also making it more difficult for students to cheat. In addition, setting specific criteria and standards for the materials that must be in the paper might make plagiarism impractical if not nearly impossible. (Contains 14 endnotes.).
