Since the nation-state sprang into being in 1965, Singapore literature in English has blossomed energetically, and yet there have been few books focusing on contextualizing and analyzing Singapore literature despite the increasing international attention garnered by Singaporean writers. This volume brings Anglophone Singapore literature to a wider global audience for the first time, embedding it more closely within literary developments worldwide. Drawing upon postcolonial studies, Singapore studies, and critical discussions in transnationalism and globalization, essays unearth and introduce neglected writers, cast new light on established writers, and examine texts in relation to their specific Singaporean local-historical contexts while also engaging with contemporary issues in Singapore society. Singaporean writers are producing work informed by debates and trends in queer studies, feminism, multiculturalism and social justice -- work which urgently calls for scholarly engagement. This groundbreaking collection of essays aims to set new directions for further scholarship in this exciting and various body of writing from a place that, despite being just a small 'red dot' on the global map, has much to say to scholars and students worldwide interested in issues of nationalism, diaspora, cosmopolitanism, neoliberalism, immigration, urban space, as well as literary form and content. This book brings Singapore literature and literary criticism into greater global legibility and charts pathways for future developments.

This alternative textbook for courses on teaching mathematics asks teachers and prospective teachers to reflect on their relationships with mathematics and how these relationships influence their teaching and the experiences of their students. Applicable to all levels of schooling, the book covers basic topics such as planning and assessment, classroom management, and organization of classroom experiences; it also introduces some novel approaches to teaching mathematics, such as psychoanalytic perspectives and post-modern conceptions of curriculum. Traditional methods-of-teaching issues are recast in a new discourse, provoking new ideas for making mathematics education meaningful to teachers as well as their students. Co-authored by a professor and coordinator of mathematics education programs, with illustrative contributions from practicing elementary, middle, and high school mathematics teachers, this book is a unique collaboration across all pre-college grades, making it ideal for teacher discussion groups at any level. Embracing Mathematics: integrates pedagogy and content exploration in ways that are unique in mathematics education features textboxes with reflection questions and suggested explorations that can be easily utilized as homework for a course or as discussion opportunities for teacher reading groups offers examples of teachers' action research projects that grew out of their interactions with the main chapters in the book is not narrowly limited to mathematics education but incorporates curriculum studies - an invaluable asset that allows instructors to find more ways to engage students in self-reflexive acts of teaching Embracing Mathematics is intended as a method text for undergraduate and master's-level mathematics education courses and more specialized graduate courses on mathematics education, and as a resource for teacher discussion groups.

Alma Cruz wishes her willful teenage daughter, Luz, could know the truth about her past, but there are things Luz can never know about the journey Alma took to the US to find her missing father. In 2000—three years after the disappearance of her father, who left Oaxaca to work on farms in California—Alma sets out on a perilous trek north with her sister, Rosa. What happens once she reaches the US is a journey from despair to hope. Timeless in its depiction of the depths of family devotion and the blaze of first love, Luz conveys, with compassion and insight, the plight of those desperate to cross the US border.

The revised FTCE Professional Education Test is already being administered, and the changes are major. Competencies on the test have been reduced from 14 to just 8. The exam is also now offered year round by appointment. This CliffsNotes test-prep book provides in-depth coverage of the changes, including the structure and format of the test, and an explanation of the scoring structure of the test. It also features frequently asked questions, competency reviews, and sample questions and answers, throughout.

Included in the package are two, model full-length practice tests to ensure success on test-taking day.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
