

Chemistry Zumdahl 8th Edition

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills the process of becoming independent problem-solvers. They help students learn to think like chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and more complex materials and their properties. Because this approach differs from what students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with new material. The atoms first organization provides an opportunity for students to use the skills of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.
