This illustrated history chronicles electric and hybrid cars from the late 19th century to today's fuel cell and plug-in automobiles. It describes the politics, technology, marketing strategies, and environmental issues that have impacted electric and hybrid cars' research and development. Learn how to build an affordable hot rod following the advice of the masters! In *How to Build Affordable Hot Rods*, author and lifelong hot rod aficionado Tony Thacker takes you through the process of building a hot rod on a budget. Drawing on his own extensive experience of both buying and building rods, Thacker explores the good, the bad, and the ugly. The good was setting a land speed record at Bonneville, the bad was buying a rod from which the previous owner had "swapped out" the good engine, and the ugly--well, let's just not go there. *How to Build Affordable Hot Rods* includes extensive how-to sections that cover step-by-step chassis builds for Model A, 1932, and 1936 Fords, including front- and rear-end setups. The in-depth chassis builds are complimented with sections on powertrain choices, bodywork and roof chops, wheels and tires, and wiring and paint. Also included are chapters on interiors and the all-important details that individualize any project to ensure that it stands out from the rest. When Henry Ford introduced his beloved Model T, he unwittingly gave the average person the means to go racing. Prior to the T, racing was mostly a sport of the rich, but that changed with the Model T. Stripped of fenders and hopped up with speed parts, T speedsters ruled, and it wasn't long before enthusiasm on the track translated to the street and the term hot rod entered the vernacular. Of course, it didn't need to be a Ford (and still doesn't), but the easiest and therefore cheapest route to Hot Rod Boulevard is down the Ford road. The journey accelerated after World War II, as hot rodding boomed with the growth of speed shops, car shows, drag racing, talented and trained GIs returning home, and the launch of Hot Rod magazine to spread the gospel far and wide. More than 100 years after the original Model T, hot rodding remains alive and well in the Australasia, Europe, and (of course) its birthplace the US.

Learn from the best and get started building your affordable hot rod today!

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. As automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used cars through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crumple ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to occur on rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More warranties taken from automaker internal service bulletins and memos than ever.

Multinational Firms in China

Confronting a New Dynamic in the Global Economy

As a consequence of aggressive competition, Chinese industries have become increasingly consolidated. While the extent to which emerging local firms can challenge well-established multinational firms varies by industry, there are common characteristics of 'winners' within each firm type. A handful of multinational and local firms emerged victorious by acquiring small, weak, and regional players to become truly national players. During this process, weaker multinational firms were crowded out of the market by stronger multinationals as well as by emerging local powerhouses. The successful local firms that survive competition in China have global ambitions and venture into international markets, challenging foreign multinational firms in the global marketplace. This book examines how multinational firms grew their operations in China and how successful local firms emerged from the restructuring process, as well the competition between them, in the fierce marketplace of China's economic reform. While anecdotal evidence on this topic is widespread, there exists no comprehensive research. This book seeks to address this gap by rooting its discussion in the author's extensive and rigorous statistical analyses and detailed case studies across five industries: consumer products, beer, telecom, automobile, and steel.
