This book promotes the development of nontraditional literacies in adult education, especially as these critical literacies relate to global citizenship, equity, and social justice. As this edited collection argues, a rapidly changing global environment and proliferation of new media technologies have greatly expanded the kinds of literacies that one requires in order to be an engaged global citizen. It is imperative for adult educators and learners to understand systems, organizations, and relationships that influence our lives as citizens of the world. By compiling a comprehensive list of foundational, sociocultural, technological and informational, psychosocial and environmental, and social justice literacies, this volume offers readers theoretical foundations, practical strategies, and additional resources.

Practical SQL is an approachable and fast-paced guide to SQL (Structured Query Language), the standard programming language for defining, organizing, and exploring data in relational databases. The book focuses on using SQL to find the story your data tells, with the popular open-source database PostgreSQL and the pgAdmin interface as its primary tools. You'll first cover the fundamentals of databases and the SQL language, then build skills by analyzing data from the U.S. Census and other federal and state government agencies. With exercises and real-world examples in each chapter, this book will teach even those who have never programmed before all the tools necessary to build powerful databases and access information quickly and efficiently. You'll learn how to:

- Create databases and related tables using your own data
- Define the right data types for your information
- Aggregate, sort, and filter data to find patterns
- Use basic math and advanced statistical functions
- Identify errors in data and clean them up
- Import and export data using delimited text files
- Write queries for geographic information systems (GIS)
- Create advanced queries and automate tasks

Learning SQL doesn't have to be dry and complicated. Practical SQL delivers clear examples with an easy-to-follow approach to teach you the tools you need to build and manage your own databases. This book uses PostgreSQL, but the SQL syntax is applicable to many database applications, including Microsoft SQL Server and MySQL.

For all nursing programs The state-of-the-art three-volume, concept-based, student-centered introduction to nursing focuses on 51 indispensable biophysical professional and healthcare concepts; and more than 435 nursing skills. Today, nurses must be able to transfer their knowledge to new situations, and stay current with new disorders, treatments, and evidence-based practice. Nursing: A Concept-Based Approach to Learning, Volumes I-III, Second Edition with MyNursingLab for Concepts will help them achieve all these goals. Its concept-based approach requires students to participate actively, assume more responsibility for their knowledge, integrate concepts, apply information, and use clinical reasoning. Instead of memorizing thousands of alterations, students gain in-depth knowledge of selected alterations, and learn how to apply that knowledge as new challenges and client presentations come their way. VOLUME I: The first of three volumes, the fully-updated Volume I focuses on 21 crucial biophysical concepts: acid-base balance; cellular regulation; comfort; digestion; elimination; fluids/electrolytes; health, wellness, and illness; immunity; infection; inflammation; intracranial regulation; metabolism; mobility; nutrition; oxygenation; perfusion; perioperative care; sensory perception; sexuality; thermoregulation, and tissue integrity. These concepts are illuminated with nearly 100 exemplars covering the entire lifespan. VOLUME II: The second of two volumes, the fully-updated Volume II focuses on 30 crucial concepts every nurse needs to master. It begins with several Psychosocial Modules covering addiction, cognition, culture/diversity, development, family, grief/loss, mood/affect, self, spirituality, stress/coping, and violence. After focusing on reproduction, it turns to the nursing domain, covering assessment, caring interventions, clinical decision making, collaboration, communication, care management, professional behaviors, and client teaching/learning. Finally, it turns to the nurse's broader roles, focusing on accountability, advocacy, evidence-based practice, healthcare systems, health policy, informatics, legal issues, quality improvement, and safety. The 30 concepts included in Volume II are illuminated with more than 80 exemplars covering the entire lifespan. CONSISTENT PEDAGOGY FOR IMPROVED KNOWLEDGE RETENTION: Volume I and II in the textbook series have an updated concept-level template that presents each concept and exemplar in the same manner: Each

CONCEPT follows the following template: Normal Presentation - Developmental Considerations - Alterations - Related Concepts - Physical Assessment - Diagnostic Tests - Interventions & Therapies Each EXEMPLAR follows the following template: Overview - Pathophysiology and Etiology - Clinical Manifestations and Therapies - Nursing Process - Nursing Care Plan - Relate and Reflect VOLUME III: The only skills book of its kind, Clinical Nursing Skills: A Concept-Based Approach, Volume III, 2nd edition is designed to meet the specific needs and approach of concept-based nursing programs in teaching key nursing skills. Clinical Nursing Skills: A Concept-based Approach presents more than 435 of the most important skills performed by nurses including common variations. This second edition has been revised, restructured, and updated to reflect the most current nursing practices and standards. Each skill is characterized by an overarching concept and is presented in exceptional step-by-step detail with beautiful, real-life illustrations, which help students visualize exactly how each skill is completed.

MyNursingLab for Concepts MyNursingLab for Concepts is an online homework, tutorial, and assessment program that truly engages students in learning, and is designed to support the concepts and exemplars included in Volumes I and II of Nursing: A Concept-based Approach to Learning, 2e. The Springer Handbook of Nanomaterials covers the description of materials which have dimension on the "nanoscale". The description of the nanomaterials in this Handbook follows the thorough but concise explanation of the synergy of structure, properties, processing and applications of the given material. The Handbook mainly describes materials in their solid phase; exceptions might be e.g. small sized liquid aerosols or gas bubbles in liquids. The materials are organized by their dimensionality. Zero dimensional structures collect clusters, nanoparticles and quantum dots, one dimensional are nanowires and nanotubes, while two dimensional are represented by thin films and surfaces. The chapters in these larger topics are written on a specific materials and dimensionality combination, e.g. ceramic nanowires. Chapters are authored by well-established and well-known scientists of the particular field. They have measurable part of publications and an important role in establishing new knowledge of the particular field.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.

This volume represents a collection of pioneering papers introducing immunochemical techniques to the aquatic sciences. It is the product of a workshop entitled "Immunochemical Approaches to Coastal, Estuarine and Oceanographic Questions" held at the University of Southern Maine, Portland, Oct. 5-7, 1986. Funding from many sources made this workshop possible, and is gratefully acknowledged. The reader will note great variability in both the quality and scope of the papers which we have divided into four sections: I. Background material on the immune system (borrowed from a recent NIH publication) II. Background material related to aquatic sciences III. Techniques IV. Applications Readers familiar with terminology are directed to start with the original contributions related to aquatic sciences, page 21. Some of the

contributions are abstracts only. Others are preliminary, for which we are grateful to the authors for their willingness to share recent sometimes tentative findings with a broader community. Some offer novel and tempting insights, but as they exist, lack adequate standards and controls. Others are thorough and represent major scientific contributions. The promise rests in generating and working with reagents of great specificity enabling orders of magnitude improvements in the sensitivity of our measurements. Authors also address the problems and limitations. We thank the numerous authors and reviewers. In support of every successful endeavor is someone of unusual savvy. For us, this has been David A. Phinney. His leadership, wisdom and wit have been important to the introduction of flow cytometry/sorting and immunochemistry into aquatic research.

The compartmentation of genetic information is a fundamental feature of the eukaryotic cell. The metabolic capacity of a eukaryotic (plant) cell and the steps leading to it are overwhelmingly an endeavour of a joint genetic cooperation between nucleus/cytosol, plastids, and mitochondria. Alter ation of the genetic material in anyone of these compartments or exchange of organelles between species can seriously affect harmoniously balanced growth of an organism. Although the biological significance of this genetic design has been vividly evident since the discovery of non-Mendelian inheritance by Baur and Correns at the beginning of this century, and became indisputable in principle after Renner's work on interspecific nuclear/plastid hybrids (summarized in his classical article in 1934), studies on the genetics of organelles have long suffered from the lack of respectabil ity. Non-Mendelian inheritance was considered a research sidelineifnot a freakby most geneticists, which becomes evident when one consults common textbooks. For instance, these have usually impeccable accounts of photosynthetic and respiratory energy conversion in chloroplasts and mitochondria, of metabolism and global circulation of the biological key elements C, N, and S, as well as of the organization, maintenance, and function of nuclear genetic information. In contrast, the heredity and molecular biology of organelles are generally treated as an adjunct, and neither goes as far as to describe the impact of the integrated genetic system.

Online learning has been touted as one way of reducing the cost of higher education while simultaneously addressing the increasing demand for educational opportunity and providing access to hitherto "left out" populations. Many universities are defying tradition by offering completely online degrees for global participants. As such, research is needed to improve the design of online and virtual learning environments to ensure that they are inclusive and culturally adaptive for the global education marketplace. The Handbook of Research on Cross-Cultural Online Learning in Higher Education shares paradigms, perspectives, insights, challenges, and best practices for the instructional design and delivery of cross-cultural adult web-based

learning experiences and examines adult learner characteristics and competencies critical for the design of these applications. The content within this publication covers trending topics including virtual learning, culturally adaptive environments, and online education and is intended for instructional designers, faculty, administrators, students, and researchers.

This publication provides a historical perspective on the current educational context. It discusses the impact of the colonial past and the changing practices of the present, highlighting as it does the key concepts, information and principles in the African context. The book touches on such issues as the history of adult education in Africa, philosophy and adult education, socio-cultural, political and economic environments, opportunities and access for adult learners, gender and development in adult education, and adult education as a developing profession. It further considers the impact of information and communication technology and globalization on the policies and structures of lifelong learning.--Publisher's description.

Providing a comprehensive review of the interactions between exercise and human reproduction, this unique text focuses on both the positive and negative consequences of sport and physical activity on male and female fertility and infertility and the biological mechanisms and processes behind them. Beginning with a review of the structure and function of the male and female reproductive systems as well as fertilization and gestation, the discussion then turns to the physiology and endocrinology of sport and exercise, which is further elaborated in subsequent chapters on the impact of physical activity, hormonal changes, pathologies, and consequences of drug use for active men and women. Additional chapters address related topics, such as the impact of sport on young athletes and developing reproductive potential, physical activity and pregnancy, the use of oral contraceptives in athletes, oxidative stress, and the impact of nutritional deficiencies on athletes' fertility, with a final chapter providing recommendations and therapeutic guidelines for exercise-related reproductive disorders.
