Where is the power? Students of politics have pondered this question and social scientists have scrutinized formal political institutions and the distribution of power among agencies of the government and the state. But we still lack a rich bank of data measuring the power of specific governmental agencies, particularly national legislatures. This book assesses the strength of the national legislature of every country in the world with a population of at least a half-million inhabitants. The Legislative Powers Survey (LPS), is a list of 32 items that gauges the legislature's sway over the executive, its institutional autonomy, its authority in specific areas, and its institutional capacity. Data were generated by means of a vast international survey of experts, extensive study of secondary sources, and painstaking analysis of constitutions and other relevant documents. Individual country chapters provide answers to each of the 32 survey items, supplemented by expert commentary and relevant excerpts from constitutions.

Cambridge IGCSE Development Studies has been specially written for Cambridge IGCSE Development Studies Syllabus (0453). Written in a clear and accessible style, the book offers comprehensive coverage with an international perspective and in-depth analysis of all topics. This superbly illustrated book examines all aspects of the use of modern post-mortem imaging in forensic investigations, which has flourished since the introduction of multidetector computed tomography and magnetic resonance imaging. Readers will find guidance on the applications of all relevant imaging modalities and contrast media. Analogies and differences between forensic and clinical imaging are highlighted, and it is explained what lessons forensic imaging holds for clinical radiology, and vice versa. The remainder of the book comprehensively documents the typical "normal" post-mortem findings and the imaging presentations in various forms of trauma and nontraumatic forensic cases, including those in which medical liability may be an issue. The authors are radiologists and forensic radiologists from across the world who have extensive experience in post-mortem imaging. The book is primarily intended for forensic pathologists, radiologists, and radiographers seeking practical information on forensic imaging, but it will also be of interest to others, such as lawyers, who encounter this specialty during their professional activities.

When Bastian was born in July 2000, his parents were looking forward to an exciting future, but right from the start Bastian

brought surprise after surprise. He had started reading at the age of two, and was in the fifth year of school by age seven. He could speak eight languages by the time he was ten, and had passed almost enough A Levels to start university by thirteen. A lot of unconventional solutions were required for his problems, including temporarily moving to Singapore and battles with the authorities and teachers. A thick skin was certainly required when talking to people about Bastian. This book is about a mother's experiences with her highly gifted boy. It shows how being highly gifted can be both a blessing and a curse.
