**What is the difference between an academic and professional qualification? Who should get a professional qualification? Did you know that some professions can not be legally practised with a degree alone? Why get a UK qualification? Is it expensive to gain a British qualification? What is a chartered institute or society, and is it better than a non-chartered body? What is the difference between a professional body and a trade union? These are all questions answered in this book which is designed to help individuals choose a career path and the right professional organisation. In today's world it isn't enough to have a qualification, you need to be able to meet with peers and use the valuable networks that are already in place to foster your profession. Your Professional Qualification provides a comprehensive survey of the qualifications available in the UK along with guidance on where they lead, entry requirements, where to apply and where to study. Derived from the vast and authoritative British Qualifications database, this important publication provides the first easily accessible guide to qualifications and how to get them in the UK. Built around a comprehensive directory of professional qualifying bodies each professional area is described in depth and its qualifications identified and explained. The book is supported by a simple website, which ensures purchasers of the book are kept up-to-speed with new developments.**

**Essays presented to Peter Gordon**

*The background of this research is related to innovative lightweight construction methods for short-term applications realized with highly recyclable materials produced from renewable resources. Specifically, the possibility of using selected paper-based products for design purposes is examined. The main topic discussed regards the state of the art and future potential of joining techniques for assemblies and structures designed with paper-based products. In this context, the preference on paper-tubes for a variety of designs is examined closely. A collection of case studies for selected joining techniques supported with digital tools, fabrication of prototypes and targeted structural experiments demonstrates possibilities and considerations. This book presents the research process and aims to inspire architects, designers and engineers who are eager to discuss on material innovation and the steps that need to be taken to examine the feasibility of such ideas.*

*This document sets out a plan for England in developing world class employment skills and is a companion document to the Green Paper, Cm.7130, In Work, Better Off (ISBN 9780101713023) also published today, and follows on from the Leitch Review, published December 2006 (ISBN 9780118404860) along with an Executive Summary (ISBN 9780118404792). This publication aims to explain how the Government will provide the right supporting framework to act as a catalyst for a skills revolution. More than a third of adults in the UK don't have the equivalent of a basic school leaving certificate; 6.8 million people have serious problems with numbers and 5 million people are not functionally literate. As part of this development, the Government has set out new rights that learners and employers will have, under what are called Skills Accounts and the Skills Pledge. The Skills Accounts will be part of the new adults careers service done through Jobcentre Plus, which aims to give every adult easy access to skills and careers advice. The Skills Pledge enables employers to demonstrate their commitment to improving skills in their workplace, with the Government supporting employers through Train to Gain brokerage. Instrument Technology, Volume 3: Telemetry and Automatic Control deals with advances in telemetry instruments used in automatic control of industrial processes. The focus is on instruments used to transmit to a control room an indication of the value of a measured variable, and on instruments and mechanisms used to control process variables. The basic physical principles are discussed and the actual instruments are classified according to the principle upon which they are based. This volume consists of two chapters and begins with an overview of telemetry and pneumatic methods of telemetry. Electrical telemetry systems are described in terms of telemetry by variation of an electrical quantity, balanced bridge systems, and position systems. The second chapter discusses the theory of automatic control and illustrates the automation of temperature control in furnaces. The construction and operation of some of the simple, self-acting process controllers are explained and the more elaborate controllers are described. This monograph will be useful to students and those involved in the craft and science of instrumentation.

During the 1980s and 1990s the elaboration of a reformed system of vocational qualifications was perhaps the most controversial of all the governments efforts to improve the provision of vocational education and training. Based largely on interviews with nearly 100 individuals who were closely involved with these reforms, this book provides an in-depth account of the origins, development and implementation of NVQ and GNVQ policies. In accounting for the progress of vocational qualifications policy three main areas are covered by the book. Firstly the authors look at the origins of the reformed system, then examine the initial implementation of the NVQ and GNVQ policies in the late 1980s and early 1990s and identify the considerable problems that accompanied the reform process. Thirdly, the book focuses on the ways in which the reformed policy was sustained during the 1990s.
