Read Free Class 4 Math Solution Guide In Bangladesh

continue to remain perplexed as a result of numerous subject areas that must be remembered and correlated when solving problems.

Various interpretations of finite and discrete math terms also contribute to the

Read Free Class 4 Math Solution Guide In Bangladesh

difficulties of mastering the subject. In a study of finite and discrete math, REA found the following basic reasons underlying the inherent difficulties of finite and discrete math: No systematic rules of analysis

Read Free Class 4 Math Solution Guide In Bangladesh

were ever developed to follow in a step-by-step manner to solve typically encountered problems. This results from numerous different conditions and principles involved in a problem that leads to many

possible different solution methods. To prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps, making this task more burdensome than solving the problem

directly due to the expectation of much trial and error. Current textbooks normally explain a given principle in a few pages written by a finite and discrete math professional who has insight into the

Read Free Class 4 Math Solution Guide In Bangladesh

subject matter not shared by others. These explanations are often written in an abstract manner that causes confusion as to the principle's use and application. Explanations then are often not

Read Free Class 4 Math Solution Guide In Bangladesh

sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied. The numerous possible variations of principles and their

Read Free Class 4 Math Solution Guide In Bangladesh

applications are usually not discussed, and it is left to the reader to discover this while doing exercises.

Accordingly, the average student is expected to rediscover that which has long been established and

Read Free Class 4 Math Solution Guide In Bangladesh

practiced, but not always published or adequately explained. The examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp

Read Free Class 4 Math Solution Guide In Bangladesh

of the involved principles.

The explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations.

Poorly solved examples such as these can be presented in

Read Free Class 4 Math Solution Guide In Bangladesh

abbreviated form which leaves out much explanatory material between steps, and as a result requires the reader to figure out the missing information. This leaves the reader with an impression that the problems

Read Free Class 4 Math Solution Guide In Bangladesh

and even the subject are hard to learn - completely the opposite of what an example is supposed to do. Poor examples are often worded in a confusing or obscure way. They might not state the nature of the

Read Free Class 4 Math Solution Guide In Bangladesh

problem or they present a solution, which appears to have no direct relation to the problem. These problems usually offer an overly general discussion - never revealing how or what is to be solved. Many examples do

Read Free Class 4 Math Solution Guide In Bangladesh

not include accompanying diagrams or graphs, denying the reader the exposure necessary for drawing good diagrams and graphs. Such practice only strengthens understanding by simplifying and organizing finite and

discrete math processes. Students can learn the subject only by doing the exercises themselves and reviewing them in class, obtaining experience in applying the principles with their different

ramifications. In doing the exercises by themselves, students find that they are required to devote considerable more time to finite and discrete math than to other subjects, because they are uncertain

with regard to the selection and application of the theorems and principles involved. It is also often necessary for students to discover those "tricks" not revealed in their texts (or review books) that make it

possible to solve problems easily. Students must usually resort to methods of trial and error to discover these "tricks," therefore finding out that they may sometimes spend several hours to solve a single

problem. When reviewing the exercises in classrooms, instructors usually request students to take turns in writing solutions on the boards and explaining them to the class. Students often find it difficult to explain

in a manner that holds the interest of the class, and enables the remaining students to follow the material written on the boards. The remaining students in the class are thus too occupied with
