Using Kouzes and Posner's five practices of exemplary leadership as a framework, the biographies demonstrate how the nurses used these processes to achieve their goals. Placed within the context and dynamics of each nurse leader's lifetime—including gender roles, science and technology, religion, politics, and economics--each biography includes a personal history, timeline, accomplishments, anecdotes, and legacy. The book honors such well-known nurse leaders as Florence Nightingale, Clara Barton, and Dorothea Dix, along with less well-known nurse leaders. Awarded second place in the 2013 AJN Book of the Year Awards in the Professional Issues category "This book is a must for all healthcare managers, recruitment, occupational health, human resources and for all nurses working within the healthcare setting to gain a full understanding and dispel the myths and misconceptions surrounding disability. It should be on all student nurses reading lists."--Nursing Times

î This book will provide nurses with the information to make objective and fact based assessments...Moreover, it will arm nursing professionals with an understanding of how the issue of disability is affecting workforce supply in nursing, how accommodations can provide assistance to individuals with disabilities, and how a balanced and thoughtful approach can allow nursing professionals to function to their fullest.

î Geraldine Polly Bednash, PhD, RN, FAAN Chief Executive Officer/Executive Director American Association of Colleges of Nursing

î [This book] has brought together information and real-life experiences of nurses who have disabilities. It will serve as an invaluable source of information on the impact of disability on the employment and retention of registered nurses.

î Suzanne C. Smeltzer, EdD, RN, FAAN Professor and Director, Center for Nursing Research Villanova University College of Nursing

This is the first research-based book to confront workplace issues facing nurses who have disabilities. It not only

examines in-depth their experiences, roadblocks to successful employment, and misperceptions surrounding these nurses, but also provides viable solutions for creating positive attitudes towards them and a welcoming work environment that fosters hiring and retention. From the perspectives and actual voices of nurses with disabilities, nurse leaders, nurse administrators, and patients, the book identifies nurses with disabilities (including sensory, musculoskeletal, emotional, and mental health issues), discusses why they choose to leave nursing or hide their disabilities, and analyzes how their disabilities may influence career choices. Written by the foremost researcher on nurses with disabilities, the book addresses patient safety, environmental factors, and retention strategies. It discusses why many nurses feel the need to conceal their disability even though it does not affect their ability to carry out their duties. It addresses interactions with colleagues, administrators, and patients and explores the common misperception that nurses with disabilities jeopardize patient safety. The text discusses potential solutions such as changing nursing education, altering nurse job description, and enhancing workplace accommodations. It seeks to influence nurse leaders and administrators, who have the power to institute change and retain nurses with disabilities, and will be a valuable asset to nursing classes in policy and leadership. Key

Features: Provides solutions regarding professional issues faced by nurses with disabilities Helps nurse recruiters and administrators clarify and strengthen retention strategies Features the voices of nurses with disabilities, nurse leaders, recruitment specialists, and patients Buttressed by four research studies and written by the leading researcher in the field

The first text to address the CNL role and the wider scope of nursing leadership This is the first text to address not only the Clinical Nurse Leader role but also the wider scope of nursing leadership through the lens of the Clinical Nurse Leader. Written for CNL programs in the US and beyond, the book is organized according to the test blueprint of the AACN's content outline for the latest CNL certification exam. By virtue of its expansive coverage of nursing leadership beyond the CNL--case managers, clinical educators, quality improvement specialists, and many other arenas--the text will also be a valuable addition to other nursing leadership programs. The text examines APRN/CNL leadership trends, types of leadership, health care advocacy, role implementation and integration, lateral integration of care services, and ethical nurse leadership. It broadly addresses patient assessment and clinical outcomes management, and covers the many facets of the care environment, from organizational

structure to risk management to health care informatics and technology. Chapter objectives, clinical examples, exemplars, and other resources facilitate information retention. The text also serves as an authoritative study guide for CNL certification exam preparation. Key Features: Serves as the only text specifically designed to address the CNL role Encompasses the wider scope of nursing leadership beyond the CNL role Follows the most recent CNL Certification text blueprint, making it an ideal resource for test preparation Facilitates in-depth understanding of material with chapter objectives, exemplars, and clinical examples

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in

redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This official NLN guide is the only preparation book for the NLN Certified Academic Clinical Nurse Educator Examination (CNE®/cl) that aligns with the NLN core competencies for academic clinical nurse educators and the test blueprint, giving you a competitive advantage. More than 500 multiple-choice questions with accompanying rationales provide essential review of test content and identify areas requiring further study, providing the preparation you need to excel on your exam.

“Earning the CNE®/cl certification demonstrates the nurse educator's commitment to excellence and professional expertise in the role of an academic clinical nurse educator.”

Being deployed to a war zone can result in numerous adverse psychological health conditions. It is well documented in the literature that there are high rates of psychological disorders among military personnel serving in Operation Enduring Freedom in Afghanistan and Operation Iraqi Freedom in Iraq as well as among the service members' families. For service members' families, the degree of hardship and negative consequences rises with the amount of the service members' exposure to traumatic or life-altering experiences. Adult and child members of the families of service members who experience wartime deployments have been found to be at increased risk for symptoms of psychological disorders and to be more likely to use mental health services. In an effort to provide early recognition and early intervention that meet the psychological health needs of service members and their families, DOD currently screens for many of these conditions at numerous points during the military life cycle, and it is implementing structural interventions that support the improved integration of military line personnel, non-medical caregivers, and clinicians, such as RESPECT-Mil (Re-engineering Systems of Primary Care Treatment in the Military), embedded mental health providers, and the Patient-Centered Medical Home. Preventing Psychological Disorders in Service Members and Their Families evaluates risk and protective factors in military and family populations and suggests that prevention strategies are needed at multiple levels - individual, interpersonal, institutional, community, and societal - in order to address the influence that

these factors have on psychological health. This report reviews and critiques reintegration programs and prevention strategies for PTSD, depression, recovery support, and prevention of substance abuse, suicide, and interpersonal violence.
