Since the first suffering supplicant offered a prayer to his god or the first mother cradled an ailing child in her caring arms, we have witnessed how human health and healing go beyond any inventory of parts and infusion of chemicals. We humans are a complex melding of thought, emotion, spirit and energy and each of those components is as critical to our well-being as our physiological status. Even if we are just beginning to quantify and document these seemingly intangible aspect, to ignore them in the practice of medicine is neglect and an invitation to do harm. The Scientific Basis of Integrative Health has been extensively updated and expanded to provide a comprehensive guide to integrative medicine. Taking a balanced and objective approach, this leading text bridges the gap between Western science and Eastern philosophy. It provides doctors and other health practitioners with information on complementary and alternative approaches to health, that is authoritative, evidence based, and epidemiologically substantiated. Written for doctors and healthcare professionals by pioneering practitioners and updated with the newest research across and increasing range of possibilities, this third edition includes nine new chapters covering topics such as: Electrophotonic imaging; Neuroacupuncture; Naturopathic medicine; Integrative nutrition. Pulitzer Prize-winning foreign correspondent William Gordon lands in the middle of a bizarre Mafia power struggle after he inherits a most unusual legacy from his late uncle, the last of the great Jewish mobsters

Presenting an innovative framework for tailoring cognitive-behavioral interventions to each client's needs, this accessible book is packed with practical pointers and sample dialogues. Step by step, the authors show how to collaborate with clients to develop and test conceptualizations that illuminate personal strengths as well as problems, and that deepen in explanatory power as treatment progresses. An extended case illustration demonstrates the three-stage conceptualization process over the entire course of therapy with a multiproblem client. The approach emphasizes building resilience and coping while decreasing psychological distress. Special features include self-assessment checklists and learning exercises to help therapists build their conceptualization skills.

*This textbook provides a succinct, contemporary introduction to intercultural communication with a focus on actual language use. With English as a lingua franca and Communicative Accommodation Theory as the underpinning concepts, it explores communication, language use, and culture in action. Each chapter includes discourse extracts so that students can apply what they have learned to real text examples, and supplementary instructor materials including suggestions for discussion points and activities are hosted on springer.com. The book will be key reading for students taking modules on Intercultural Communication or Language, Culture and Communication as part of a degree in Linguistics and Applied Linguistics, or English Language both at undergraduate and postgraduate level.*

*This book combines scholarship in pragmatics, linguistic anthropology, and philosophy to address the problem of violence in language. How do words wound? What is the relation between physical and linguistic violence? How do racial invectives, misogynous language, homophobic slurs, among other forms of hate speech, affect the body and make us vulnerable to conditions of injurability that language brings about? While investigating the limits that violence poses for everyday speech action, understanding, representation, and our shared frameworks of intelligibility, this collective volume theoretically bridges knowledge from canons in linguistic pragmatics, continental philosophy and linguistic/semiotic anthropology and the dialogic perspective of subjects who are located in the peripheries of South America and Europe. The scholarship gathered here intends to offer a perspective on the violence of words that is attentive to practices and sensibilities that do not always fit into hegemonic ideologies of self and language.*

*This book brings Afrofuturism into conversation with digital humanities to pioneer the field of Digital Africana Studies, and shows how students and academics can engage with the vision of Afrofuturism, both theoretically and practically, in the classroom and through research. As Black people across the globe consider their place in the future following the past two decades of technological advancement, Afrofuturism and its relevance for the humanities has become ever pertinent. While Afrofuturism has thus far been discussed through a literary, artistic, or popular culture lens, growing use of new technologies, and its resultant intersections with the reality of our racial experiences, has created a need for approaching Afrofuturism from a digital studies perspective. Via detailed case studies, Bryan W. Carter introduces the field of Digital Africana Studies to demonstrate how this new area can be experienced pedagogically. Alongside the book, readers can also visit select Digital Africana Studies projects that exemplify the various technologies and projects described at the author's website: [bryancarter.com/projects](http://bryancarter.com/projects). Given its unique approach to the path-breaking tradition of Afrofuturism, the book will be indispensable for scholars and students across fields such as digital humanities, media studies, black studies, African American studies, and Africana studies.*

Ideal for neurosurgeons, neurologists, neuroanesthesiologists, and intensivists, Monitoring in Neurocritical Care helps you use the latest technology to more successfully detect deteriorations in neurological status in the ICU. This neurosurgery reference offers in-depth coverage of state-of-the-art management strategies and techniques so you can effectively

monitor your patients and ensure the best outcomes. Understand the scientific basis and rationale of particular monitoring techniques and how they can be used to assess neuro-ICU patients.

Make optimal use of the most advanced technology, including transcranial Doppler sonography, transcranial color-coded sonography, measurements of jugular venous oxygen saturation, near-infrared spectroscopy, brain electrical monitoring techniques, and intracerebral microdialysis and techniques based on imaging. Apply multimodal monitoring for a more accurate view of brain function, and utilize the latest computer systems to integrate data at the bedside. Access practical information on basic principles, such as quality assurance, ethics, and ICU design.

*Emphasizing the conceptual development of statistical ideas, MIND ON STATISTICS actively engages students and explains topics in the context of excellent examples and case studies. This text balances the spirit of statistical literacy with statistical methodology taught in the introductory statistics course. Jessica Utts and Robert Heckard built the book on two learning premises: (1) New material is much easier to learn and remember if it is related to something interesting or previously known; (2) New material is easier to learn if you actively ask questions and answer them for yourself. More than any other text available, MIND ON STATISTICS motivates students to develop their statistical intuition by focusing on analyzing data and interpreting results as opposed to focusing on mathematical formulation. The new edition of this exciting text, enhanced with new material and features, appeals to a wide array of students and instructors alike.*

*Okonkwo is the greatest warrior alive, famous throughout West Africa. But when he accidentally kills a clansman, things begin to fall apart. Then Okonkwo returns from exile to find missionaries and colonial governors have arrived in the village. With his world thrown radically off-balance he can only hurtle towards tragedy. Chinua Achebe's stark novel reshaped both African and world literature. This arresting parable of a proud but powerless man witnessing the ruin of his people begins Achebe's landmark trilogy of works chronicling the fate of one African community, continued in Arrow of God and No Longer at Ease.*

The Torts Process, Ninth Edition uses a student-friendly, procedurally-focused approach that relies on proven problem-and-cases pedagogy to illuminate the overarching structure and organization of tort law. Its lively mix of problems, cases, notes, and questions stimulate thought and discussion, while providing a firm foundation in tort doctrine, history, and theory.

This book presents all the publicly available questions from the PISA surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment.

There has been explosive progress in the economic theory of uncertainty and information in the past few decades. This subject is now taught not only in departments of economics but also in professional schools and programs oriented toward business, government and administration, and public policy. This book attempts to unify the subject matter in a simple, accessible manner. Part I of the book focuses on the economics of uncertainty; Part II examines the economics of information. This revised and updated second edition places a greater focus on game theory. New topics include posted-price markets, mechanism design, common-value auctions, and the one-shot deviation principle for repeated games.

Viewing Foucault in the light of work by Continental and American philosophers, most notably Nietzsche, Habermas, Deleuze, Richard Rorty, Bernard Williams, and Ian Hacking, Genealogy as Critique shows that philosophical genealogy involves not only the critique of modernity but also its transformation. Colin Koopman engages genealogy as a philosophical tradition and a method for understanding the complex histories of our present social and cultural conditions. He explains how our understanding of Foucault can benefit from productive dialogue with philosophical allies to push Foucaultian genealogy a step further and elaborate a means of addressing our most intractable contemporary problems.

This collection brings together more than fifty of Edgar Allan Poe's most important stories, poems, and critical writings, which established him as one of the most distinctive voices in American Literature, in a single accessible volume. Alongside annotated texts of each work, it also includes a complete Reader's Guide to Poe's work to help readers explore the contexts, style, and reception of his writing from his own time to today. An essential resource for students and teachers of Poe, this book includes stories such as 'The Fall of the House of Usher', 'The Tell-Tale Heart', and 'The Purlined Letter' as well as his Gothic narrative poem 'The Raven' and some of his most significant critical writings.

Archaeologists as Activists

We live in a fundamentally changed world. It 's time for your approach to strategy to change, too. The evidence is all around us. Extreme weather, driven by climate change, is shattering records all over the planet. Our natural resources are in greater demand than ever before as a billion more people enter the global middle class, wanting more of everything. Radical transparency is opening up company operations and supply chains to public scrutiny. This is not some futuristic scenario or model to debate, but today 's reality. We've passed an economic tipping point. A weakening of the foundations of our planetary infrastructure is costing businesses dearly and putting our society at risk. The mega challenges of climate change, scarcity, and radical transparency threaten our ability to run an expanding global economy and are profoundly changing " business as usual. " But they also offer unprecedented opportunities: multi-trillion-dollar markets are in play, and the winners of this new game will profit mightily. According to Andrew Winston, bestselling author (Green to Gold) and globally recognized business strategist, the way companies currently operate will not allow them to keep up with the current—and future—rate of change. They need to make the Big Pivot. In this indispensable new book, Winston provides ten crucial strategies for leaders and companies ready to move boldly forward and win in this new reality. With concrete advice and tactics, and new stories from companies like British Telecom, Diageo, Dow, Ford, Nike, Unilever, Walmart, and many others, The Big Pivot will help you, and all of us, create more resilient businesses and a more prosperous world. This book is the blueprint to get you started. This book, a follow-up to Kitaj's influential First Diasporist Manifesto (1989), is a personal reflection on the Jewish Question in contemporary art as it is lived and painted and imagined by one of today's most innovative and controversial artists. In 615 distinct propositions that deliberately echo the Commandments of Jewish Law, Kitaj here channels his ideas for a new Diasporist art in a daring stream of consciousness. Including 41 images of the artist's work chosen by him to accompany the text, this beautifully crafted volume is a unique and fascinating look into an artist's unusual life and work. From The Second Diasporist Manifesto is: 'But I swore to become myself - the new Jewish painter of a skeptical Diasporist art, born in Modernism, which cleaves to my own uncanny Jewish life of study, painting, unthinkable thoughts and near death...I admit that my Manifesto-poem is very personal, as a poem can be. But one would have to also unpack the cultural secrets of a book on Islamic Art, or Chinese or Egyptian or African Art. My Jewish Art lives a more Modernist Secret life. The Jewish Diaspora is not the only one. It's just mine.'

Recognized as the definitive book in laboratory medicine since 1908, Henry 's Clinical Diagnosis and Management by Laboratory Methods, edited by Richard A. McPherson, MD and Matthew R. **This book differs from many other casebooks in two significant ways. First, the cases are included and edited with an eye towards the number of class hours available to teach the course. The chapters are constructed so that the content can be covered in similar blocks of time. For example, one class session covers infancy, intoxication, duress, necessity, and entrapment and two class sessions are devoted to coverage of insanity. The book can be substantially completed in a three-hour course and easily completed in a four-hour course. The other feature of this book is that it is designed to focus students' attention on the problem at hand as illustrated by the case they are studying. Before**

each case, the student is told why the case has been included and what they should be considering when reading the case. The notes and questions that follow each case are designed to focus the students' attention on some of the more difficult issues raised by the case. This eBook features links to Lexis Advance for further legal research options.

*Government Alone Can't Solve Society's Biggest Problems* World hunger. Climate change. Crumbling infrastructure. It's clear that in today's era of fiscal constraints and political gridlock, we can no longer turn to government alone to tackle these and other towering social problems. What's required is a new, more collaborative and productive economic system. The Solution Revolution brings hope-revealing just such a burgeoning new economy where players from across the spectrum of business, government, philanthropy, and social enterprise converge to solve big problems and create public value. By erasing public-private sector boundaries, the solution economy is unlocking trillions of dollars in social benefit and commercial value. Where tough societal problems persist, new problem solvers are crowdfunding, ridesharing, app-developing, or impact-investing to design innovative new solutions for seemingly intractable problems. Providing low-cost health care, fighting poverty, creating renewable energy, and preventing obesity are just a few of the tough challenges that also represent tremendous opportunities for those at the vanguard of this movement. They create markets for social good and trade solutions instead of dollars to fill the gap between what government can provide and what citizens need. So what drives the solution economy? Who are these new players and how are their roles changing? How can we grow the movement? And how can we participate? Deloitte's William D. Eggers and Paul Macmillan answer these questions and more, and they introduce us to the people and organizations driving the revolution-from edgy social enterprises growing at a clip of 15 percent a year, to megafoundations, to Fortune 500 companies delivering social good on the path to profit. Recyclebank, RelayRides, and LivingGoods are just a few of the innovative organizations you'll read about in this book. Government cannot handle alone the huge challenges facing our global society-and it shouldn't. We need a different economic paradigm that can flexibly draw on resources, combine efforts, and create value, while improving the lives of citizens. The Solution Revolution shows the way.

This book on "Orchid Biology: Recent Trends & Challenges" reviews the latest strategies for the preservation and conservation of orchid diversity and orchid germplasm. It is an outcome of the Proceedings of the International Symposium on "Biodiversity of Medicinal Plants & Orchids: Emerging Trends and Challenges" held on 9-11 February 2018 at Acharya Nagarjuna University, India. In addition, eminent orchid experts from around the globe were invited to contribute to this book. All chapters were peer-reviewed by international experts. The Orchidaceae are one of the largest families of flowering plants, comprising over 700 genera and 22,500 species and contributing roughly 40 percent of monocotyledons. They also represent the second-largest flowering plant family in India, with 1,141 species in 166 genera, and contribute roughly 10% of Indian flora. Orchids comprise a unique group of plants and their flowers are among the most enchanting and exquisite creations of nature. Phylogenetically and taxonomically, the Orchidaceae are considered to be a highly evolved family among angiosperms. They show incredible diversity in terms of the shape, size and colour of their flowers, and are of great commercial importance in floriculture markets around the globe. Millions of cut flowers of Cymbidium, Dendrobium, Cattleya, Paphiopedilum, Phalaenopsis, Vanda etc., besides potted orchid plants, are sold in Western Countries and thus, the orchid cut flower industry has now become a multimillion-dollar business in Europe, the USA and South East Asia. Besides their ornamental value, orchids hold tremendous pharmaceutical potential. Root tubers of *Habenaria edgeworthii* form an important component of the 'Astavarga' group of drugs in Ayurvedic medicine. It is an established fact that tubers of some terrestrial orchids have been used to treat diarrhoea, dysentery, intestinal disorders, cough, cold and tuberculosis. Some orchids, particularly those belonging to the genera *Aerides*, *Arachnis*, *Cattleya*, *Cymbidium*, *Dendrobium*, *Epidendrum*, *Oncidium*, *Paphiopedilum*, *Phalaenopsis*, *Renanthera*, *Vanda* etc. have been extensively used to produce internationally acclaimed hybrids. Yet paradoxically, Indian orchids are victims of their own beauty and popularity. As a result, their natural populations have been declining rapidly because of unbridled commercial exploitation in India and abroad. In fact, some orchids are now at the verge of extinction, e.g. *Renanthera imschootiana*, *Diplomeris hirsuta*, *Paphiopedilum fairrieianum*, *Cypripedium elegans*, *Taeniophyllum andamanicum* etc. Given the global importance of orchids in terms of securing human health and wealth, this comprehensive compilation, prepared by international experts, is highly topical. Its content is divided into five main sections: (I) Cryopreservation & Biotechnology, (II) Orchid Biodiversity & Conservation, (III) Anatomy & Physiology, (IV) Pollination Biology and (V) Orchid Chemicals & Bioactive Compounds. All contributions were written by eminent orchid experts/professors from around the world, making the book a valuable reference guide for all researchers, teachers, orchid enthusiasts, orchid growers and students of biotechnology, botany, pharmaceutical sciences and ethnomedicine. It will be equally valuable for readers from the horticultural industry, especially the orchid industry, agricultural scientists and policymakers.

The Solution Revolution

Radically Practical Strategies for a Hotter, Scarcer, and More Open World

The global development community is teeming with different ideas and interventions to improve the lives of the world's poorest people. Whether these succeed in having a transformative impact depends not just on their individual brilliance but on whether they can be brought to a scale where they reach millions of poor people. *Getting to Scale* explores what it takes to expand the reach of development solutions beyond an individual village or pilot program so they serve poor people everywhere. Each chapter documents one or more contemporary case studies, which together provide a body of evidence on how scale can be pursued. The book suggests that the challenge of scaling up can be divided into two solutions: financing interventions at scale, and managing delivery to large numbers of beneficiaries. Neither governments, donors, charities, nor corporations are usually capable of overcoming these twin challenges alone, indicating that partnerships are key to success. *Scaling up is mission critical if extreme poverty is to be vanquished in our lifetime. Getting to Scale provides an invaluable resource for development practitioners, analysts, and students on a topic that remains largely unexplored and poorly understood.* Contributors: Tessa Bold (Goethe University, Frankfurt), Wolfgang Fengler (World Bank, Nairobi), David Gartner (Arizona State University), Shunichiro Honda (JICA Research Institute), Michael Joseph (Vodafone), Hiroshi Kato (JICA), Mwangi Kimenyi (Brookings), Michael Kubzansky (Monitor Inclusive Markets), Germano Mwabu (University of Nairobi), Jane Nelson (Harvard Kennedy School), Alice Ng'ang'a (Strathmore University, Nairobi), Justin Sandefur (Center for Global Development), Pauline Vaughan (consultant), Chris West (Shell Foundation)

*Group Counseling: Strategies and Skills* provides readers with a comprehensive exploration of group counseling with emphasis on critical techniques for effective group leadership. The text is known for being hands-on and reader friendly.

It successfully marries traditional theories and concepts with valuable strategies and sage advice that prepares group leaders for impactful practice. Readers also receive access to videos that show leaders demonstrating the skills discussed in the book. The ninth edition features new content related to the social justice movement as well as leading groups during times of crisis such as the global pandemic that began in 2020. Each chapter has been updated to include learning objectives, information on leading groups virtually, and case studies. The section about leading groups of children and adolescents has been expanded, and references throughout the text have been updated. *Group Counseling is an indispensable resource for practicing or future counselors, social workers, psychologists, and others who currently lead or are preparing to lead groups in a variety of settings.*
