By teaching the right questions to ask, Karlan and Morduch provide readers with a method for working through decisions they'll face in life and ultimately show that economics is the common thread that enables us to understand, analyze, and solve problems in our local communities and around the world. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

With an accessible approach, the third European edition of Principles of Economics provides students with the tools to analyze current economic issues. The book is underpinned by a focus on seven Core Principles, which help students to make the link between economic theory and practice. The 'economic naturalist' approach, supported by exercises, problems and examples, encourages students to employ economics principles to understand and explain the world around them. Developed from the well-regarded US textbook by Frank and Bernanke, it presents an intuitive approach to economics and is suitable for all students taking a Principles of Economics course.

The Changing Face of Economics gives the reader a sense of the modern economics profession and how it is changing. The volume does so with a set of nine interviews with cutting edge economists, followed by interviews with two Nobel Prize winners, Paul Samuelson and Kenneth Arrow, reflecting on the changes that are occurring. What results is a clear picture of today's economics--and it is no longer standard neoclassical economics. The interviews and commentary together demonstrate that economics is currently undergoing a fundamental shift in method and is moving away from traditional neoclassical economics into a dynamic set of new methods and approaches. These new approaches include work in behavioral economics, experimental economics, evolutionary game theory and ecological approaches, complexity and nonlinear dynamics, methodological analysis, and agent-based modeling. David E. Colander is Professor of Economics, Middlebury College. J. Barkley Rosser, Jr., is Professor of Economics and Kirby L. Kramer Jr. Professor of Business Administration, James Madison University. Richard P. F. Holt is Professor of Churchill Honors and Economics, Southern Oregon University.

A central concern of economics is how society allocates its resources. Modern economies rely on two institutions to allocate: markets and governments. But how much of the allocating should be performed by markets and how much by governments? This collection of readings will help students appreciate the power of the market. It supplements theoretical explanations of how markets work with concrete examples, addresses questions about whether markets actually work well and offers evidence that supposed "market failures" are not as serious as claimed. Featuring readings from Hayek, William Baumol, Harold Demsetz, Daniel FischeI and Edward Lazear, Benjamin Klein and Keith B. Lefjler, Stanley J. Liebowitz and Stephen E. Margolis, and John R. LotI, Jr., this book covers key topics such as: • Why markets are efficient allocators • How markets foster economic growth • Property rights • How markets choose standards • Asymmetric Information • Whether firms abuse their power • Non-excludable goods • Monopolies The selections should be comprehended by undergraduate students who have had an introductory course in economics. This reader can also be used as a supplement for courses in intermediate microeconomics, industrial organization, business and government, law and economics, and public policy.

This book provides a generous immanent description of liberalism, but also works against and looks beyond it. It engages liberalism and its variants in IPE at a moment in time when liberalism and liberal internationalism are experiencing something of a crisis of confidence. Though we are deeply critical of liberalism, especially the variant that dominates in IPE, we picture liberalism as variegated and thinking beyond itself. We also show how these tensions and doubts often prompt attempts at closure in the form of defensive maneuvers, like Eurocentric conceptions of development that justify Western dominance and the condemnation of scholarship that exposes relations of domination and subordination as violating the precepts of unit-level positive science. But recognizing these maneuvers within liberalism that connect to traditions that think against and beyond its central tenets.

The Economics of Scientific Misconduct explores episodes of misconduct in the natural and biomedical sciences and replication failure in economics and psychology over the past half century. Here scientific misconduct is considered from the perspective of a single discipline such as economics likely for the first time in intellectual history. Research misconduct has become an important concern across many natural, medical, and social sciences, including economics, over the past half century. Initially, a mainstream economic approach to science and scientific misconduct is taken drawn on conventional microeconomics and the theories of Becker, Ehrlich, and C. S. Peirce's "economy of research." Then the works of Peirce and Thorstein Veblen from the 19th century point toward contemporary debates over statistical inference in econometrics and the failure of recent macroeconomic models. In more contemporary economics, clashes regarding discrimination and harassment have led to a Code of Professional Conduct from the American Economic Association and a Code of Ethics from one of its members. The last chapter considers research ethics matters related to the Covid 19 Pandemic. There has been an explosion of research and some retractions. More generally, a concern with research ethics contributes to scientific progress by making some of its most difficult problems more transparent and understandable and thus possibly more surmountable.

This book offers valuable insights for students and scholars of research ethics across the sciences, philosophy of science and social science, and economic theory.

In addition to the suite of resources available within Connect Economics, over 100 key topics are reinforced with interesting and innovative videos on YouTube, provided to help non-majors see the relevance of economics. How ideas in complexity can be used to develop more effective public policy Complexity science—made possible by modern analytical and computational advances—is changing the way we think about social systems and social theory. Unfortunately, economists' policy models have not kept up and are stuck in either a market fundamentalist or government control narrative. While these standard narratives are useful in some cases, they are damaging in others, directing thinking away from creative, innovative policy solutions. Complexity and the Art of Public Policy outlines a new, more flexible policy narrative, which envisions society as a complex evolving system that is uncontrollable but can be influenced. David Colander and Roland Kupers describe how economists and society became locked into the current policy framework, and lay out fresh alternatives for framing policy questions. Offering original solutions to stubborn problems, the complexity narrative builds on broader philosophical traditions, such as those in the work of John Stuart Mill, to suggest initiatives that the authors call "activist laissez-faire" policies. Colander and Kupers develop innovative bottom-up solutions that, through new institutional structures such as for-benefit corporations, channel individuals' social instincts into solving societal problems, making profits a tool for change rather than a goal. They argue that a central role for government in this complexity framework is to foster an ecostructure within which diverse forms of social entrepreneurship can emerge and blossom.
