Mainstream textbooks present economics as an objective science, free from value judgements. The Microeconomics Anti-Textbook demonstrates this to be a myth – one which serves to make such textbooks not only off-puttingly bland, but also dangerously misleading in their justification of the status quo and neglect of alternatives. In this fully updated and expanded edition of their celebrated book, Professors Rod Hill and Tony Myatt lay out the essentials of each

topic in the standard texts in a clear and concise way, before presenting an 'anti-text' analysis and critique. Challenging the assumptions, arguments, and models, Hill and Myatt provide the essential guide to decoding the textbooks, and show that real economics is far more interesting - and subversive - than the simplistic version presented to students.

Questions that drive interest, applications that illustrate concepts, and the tools to test and solidify comprehension. Students come into their first Economics course thinking they will gain a better understanding of the economy around them. Unfortunately, they often leave with many unanswered questions. To ensure students actively internalize economics, O'Sullivan/Sheffrin/Perez use chapter-opening questions to spark interest on important economic concepts, applications that vividly illustrate those concepts, and chapter-ending tools that test and solidify understanding. Several contemporary economic theories revolve around different concepts: market failures, institutions, transaction costs, information asymmetries, motivational diversity, cognitive limitations, strategic behaviors and evolutionary stability. In recent years, many economists have argued that

the increase in circulation and mobilization of these new and heterogeneous concepts and their associated methodologies (e.g., experiments, evolutionary modelling, simulations) signify the death of neoclassical economics. Late Neoclassical Economics: The Restoration of Theoretical Humanism in Contemporary Economic Theory draws on the work of Louis Althusser, Michel Foucault and the Amherst School, to construct the concept of a self-transparent and self-conscious human subject (*Homo economicus*) as the theoretical humanist core of the neoclassical tradition. Instead of identifying the emergent heterogeneity as a break from neoclassicism, this book offers a careful genealogy of many of the new concepts and approaches - including evolutionary game theory, experimental economics and behavioural economics - and reads their elaboration as part of the restoration of the theoretical humanist core of the tradition. [Late neoclassical economics] is therefore characterized as a collection of diverse approaches which have emerged in response to the drift towards structuralism. This book is suitable for those who study political economy, history of economic thought and philosophy of economics. The arguments put forward in this text will also resonate with anyone who is interested in the fate of the neoclassical tradition and the future of economic theory.
