next 20 years and how they will affect the United States. This is the fifth installment in the National Intelligence Council's series aimed at providing a framework for thinking about possible futures and their implications. The report is intended to stimulate strategic thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories during the next 15-20 years by identifying critical trends and potential discontinuities. The authors distinguish between megatrends, those factors that will likely occur under any scenario, and game-changers, critical variables

Prominent Families of New York

A History of Pollutions in the Industrial Age

Random Hazard has a stupid name and a terrible secret: he's a wizard. Wizards aren't allowed to play in the NHL, but Random Hazard will do anything for a chance to play pro hockey. When his teammate is about to get brained by a puck going fast enough to kill, Random has no choice but to use magic. Yes, he saved the guy's life, but he destroyed his own. Kicked out of the NHL, the only thing left for him is West Hell, a freak league of shifters and drifters more blood sport than

economy' mean the 'end of history'?an we best understand the impact of revolutionary technologies on business organization and the business cycle? These are some of the questions addressed in this authoritative analysis of modern economic growth from the Industrial Revolution to the 'New Economy' of today. Chris Freeman has been one of the foremost researchers on innovation for a long time and his colleague Francisco Louçã is an outstanding historian of economic theory and an analyst of econometric models and methods. Together they chart the history of five technological revolutions: water-powered mechanization, steam-powered mechanization, electrification, motorization, and computerization. They demonstrate the necessity to take account of politics, culture, organizational change, and entrepreneurship, as well as science and technology in the analysis of economic growth.

It is cold enough to crack stones, and when the snow falls it is gray. The sky is dark. Their destination is the coast, although they don't know what, if anything, awaits them there. They have nothing; just a pistol to defend themselves against the lawless bands that stalk the road, the clothes they are wearing, a cart of scavenged food—and each other. What better Christmas surprise for detective-in-training Flavia de Luce than a dreadful murder under Buckshaw's roof - and a snowbound house full of suspects! It's Christmas time, and our beloved Flavia is tucked away in her laboratory whipping up a sticky concoction to trap that infamous sneak, Saint Nick, and thereby prove once and for all - despite the claims of her evil sisters - that he does exist. But she is soon distracted from her task: Colonel de Luce, in desperate need of funds, has rented the family's crumbling manor house to a film company for the

When its crew arrives from London to shoot a movie starring the reclusive and renowned actress, Phyllis Wyvern, there's no end to the disruptions - and dramas - demanding Flavia's attention. When Wyvern is convinced to perform a famous scene to help raise funds for the local church, it is decided that Buckshaw Manor is the only suitable location. Its foyer alone is bigger than the parish hall, and could fit every man, woman, and child in Bishop's Lacey, to a soul. It's almost Christmas Eve, but - to no one's surprise - all of the village inhabitants fight their way through a raging snowstorm to be in the audience that magical night. As

How capitalism first promoted fossil fuels

about the catastrophic implications of

climate change, the more fossil fuels we burn. How did we end up in this mess? In this masterful new history, Andreas Malm claims it all began in Britain with the rise of steam power. But why did manufacturers turn from traditional sources of power, notably water mills, to an engine fired by coal? Contrary to established views, steam offered neither cheaper nor more abundant energy—but rather superior control of subordinate labour. Animated by fossil fuels, capital could concentrate production at the most profitable sites and during the most convenient hours, as it continues to do today. Sweeping from
