*The Gram-positive and spore-forming Bacilli are the most dominant group of bacteria that exist in various ecological niches on the earth. They represent one of the most important unmapped pools of biodiversity with immense potential of applications in agriculture, environment, and industry. As these bacteria are highly tolerant to stressful environment and enhance plant tolerance to harsh environment such as salinity, drought, and heavy metal toxicity, plant-associated Bacilli have high potential for promoting sustainable crop production. Many species of Bacilli are being commercially used as phytostimulator and biofertilizer. Some of them are applied as biopesticide for protecting crop plants from phytopathogens and insect pests. The Bacillus-based products are becoming popular in ecologically sound and climate resilient agricultural production system. In fact, Bacillus and allied species based formulations are already dominating the biopesticides market, although, to compete with other formulations and chemical alternatives, the biology of Bacillus had to be understood from perspective of such applications. Our understanding of the biology and molecular-basis of the beneficial effects of plant-associated Bacilli has greatly been progressed in recent years through genomics, metagenomics, post-genomics and metabolomics studies. The volume two of the series Bacilli and Agrobiotechnology comprehensively reviews and updates current knowledge of Bacilli as phytostimulant and biological control of plant pests. Better understanding the biology, ecology and mechanism of action of the beneficial strains of Bacilli will play a role in the development of products to support green biotechnology in agriculture and industries.*

Marketing of library services has now been recognised as an essential agenda item for almost all kinds of libraries all over the world. As the term "marketing" has different meanings for different colleagues, the bundling of dozens of contributions from a truly international group of librarians is presented in this book, provides a broad scala on the topic. Therefore this book offers a useful tool for both working librarians and future librarians to understand vital issues relating to marketing of library and information services at the local, national and international level. The book is divided into six sections: Marketing concept: a changing perspective; Marketing in libraries around the world; Role of library associations; Education, training and research; Excellence in marketing; Databases and other marketing literature.

A spinal column tumor is a cancerous (malignant) or noncancerous (benign) growth that develops within or near the spinal cord or within the bones of the spine and aren't as common as brain tumors, but they do occur. The majority of spinal cord tumors are found in children and young adults, but anyone can be diagnosed with a tumor at any point in their life. Treatment for a spinal tumor may include surgery, radiation therapy, chemotherapy or other medications. Surgery can range from a minimally invasive procedure to complex reconstruction depending on the severity of cancer involvement. This book aimed to have a complete and detailed update on spinal oncologic pathology and the most advanced techniques for diagnosing and managing spinal cord and spinal column tumors. From the fundamentals of spinal cord anatomy and spinal tumors pathology to the clinical evaluation, radiological diagnosis and treatment techniques for specific spinal tumors. The book is divided into two sections, one on spinal cord tumors and one on vertebral column tumors. The text contains multidisciplinary notions on surgical approaches for resection, reconstruction, decompression and stabilization for spinal tumors. Furthermore, the text contains important updates on the diagnosis and treatment of vertebral metastases with particular attention to diagnostic algorithms. It contains contributions and experiences of some of the world's leading experts in the treatment of spinal oncological pathology, making this work rich and complete. This book is aimed at neurosurgeons, orthopedic surgeons and specialists who require a complete text on current techniques in the management of spinal tumors.

The book 'Women Empowerment and Gender Issues' tries to cover every aspect affecting women's

empowerment, starting from the historical perspective to modern day concepts like entrepreneurship and surrogacy.

This volume of comprehensive reviews updates our knowledge of research and commercialization of Bacillus-based products in agriculture and the environmental sector. The last couple of decades have witnessed tremendous growth of research on Bacillus species. Many of these species can produce industrial enzymes, and can act simultaneously as biofertilizers and as biopesticides inhibiting important phytopathogens. This "biocontrol" activity is now elucidated by a number of genomic and metabolomic studies. Bacillus formulations are being patented and commercialized on a regular basis. Understanding the biology, ecology and mechanism of action of these bacteria will play a role in the promotion of Bacillus-based products to support green technology in agriculture and agro-based industries.

**As embedded systems become more and more complex, so does the challenge of enabling fast and**

efficient communication between the various subsystems that make up a modern embedded system. Facing this challenge from a practical standpoint, Communication Protocol Engineering outlines a hands-on methodology for developing effective communication protocols for large-scale systems. A Complete Roadmap This book brings together the leading methods and techniques developed from state-of-the-art methodologies for protocol engineering, from specification and description methods to cleanroom engineering and agile methods. Popovic leads you from conceptualization of requirements to analysis, design, implementation, testing, and verification. He covers the four main design languages: specifications and description language (SDL); message sequence charts (MSCs); tree and tabular combined notation (TTCN); and unified modeling language (UML). Practical Tools for Real Skills Fully illustrated with more than 150 figures, this guide also serves as a finite state machine (FSM) library programmer's reference manual. The author demonstrates how to build an FSM library, explains the components of such a library, and applies the principles to FSM library-based examples. Nowhere else are the fundamental principles of communication protocols so clearly and effectively applied to real systems development than in Communication Protocol Engineering. No matter in what stage of the process you find yourself, this is the ideal tool to make your systems successful.

In this signal work of history, Bancroft Prize winner and Pulitzer Prize finalist Lizabeth Cohen shows how the pursuit of prosperity after World War II fueled our pervasive consumer mentality and transformed American life. Trumpeted as a means to promote the general welfare, mass consumption quickly outgrew its economic objectives and became synonymous with patriotism, social equality, and the American Dream. Material goods came to embody the promise of America, and the power of consumers to purchase everything from vacuum cleaners to convertibles gave rise to the power of citizens to purchase political influence and effect social change. Yet despite undeniable successes and unprecedented affluence, mass consumption also fostered economic inequality and the fracturing of society along gender, class, and racial lines. In charting the complex legacy of our "Consumers' Republic" Lizabeth Cohen has written a bold, encompassing, and profoundly influential book.

The future of agriculture strongly depends on our ability to enhance productivity without sacrificing long-term production potential. An ecologically and economically sustainable strategy is the application of microorganisms, such as the diverse bacterial species of plant growth promoting bacteria (PGPB). The use of these bio-resources for the enhancement of crop productivity is gaining worldwide importance. “ Bacteria in Agrobiolgy: Plant Nutrient Management ” focus on the management of plant nutrient to support plant growth and development. The topics treated in this book include mechanisms of plant growth promoting rhizobacteria, zinc and phosphate solubilizing microorganisms, sulfur oxidizing bacteria, ACC deaminase, siderophores, phytohormones, quorum-sensing, biofilms, antibiotics, volatiles, denitrification and integrated nutrient management. The fungal kingdom consists of a wide variety of organisms with a diverse range of forms and functions. Fungi have been utilized for thousands of years and their importance in agriculture, medicine, food production and the environmental sciences is well known. New advances in genomic and metabolomic technologies have allowed further developments in the use of fungi in industry and medicine, increasing the need for a compilation of new applications, developments and technologies across the mycological field. Applied Mycology brings together a range of contributions, highlighting the diverse nature of current research. Chapters include discussions of fungal associations in the environment, agriculture and forestry, long established and novel applications of fungi in fermentation, the use of fungi in the pharmaceutical industry, the growing recognition of fungal infections, current interests in the use fungal enzymes in biotechnology and the new and emerging field of myconanotechnology. Demonstrating the broad coverage and importance of mycological research, this book will be of interest to researchers and students in all biological sciences.

This volume presents the results of a series of studies carried out by the author focusing on the role of posture and gesture in interpersonal communication. The first section of the book sets these studies in the general context of non-verbal communication research; in addition, previous research on posture and gesture is reviewed in order to highlight the particular issues which were chosen as the focus of research reported here. In Part II, six experiments are presented concerning the extent to which posture communicates information about listener emotions and attitudes. The seven studies reported in Part III are concerned with the relationship between posture, gesture and speech. The final section summarizes the main findings from the studies presented in this volume, discussing their theoretical and practical significance and considering their implications for the way in which research on non-verbal communication is carried out.
